Denis:

I have the Yaesu RF deck installed in the LR wheel housing cover, just forward of the washer bottle, but behind the 4WD controller. This is on an earlier car, but the compartments are the same. The power cable is a 8ga feed from a 30a breaker at the battery. Through the firewall, and under the door sill trim in the wire channel. The control cable runs from the control head under the carpet just forward of the seat, and enters the wiring channel with the power seat bundle. Both are routed up the wheelwell under the plastic molding, and into the wheelwell cover where they attach to the RF deck. The power cables from the deck are fused at the deck in addition to the self-resetting breaker at the battery. A 12V outlet is also powered by this feeder.

The antenna cable routs over the washer bottle, and out through a hole drilled through the double bulkhead from the rear door area. I drilled as close to the water seal molding as I could, and put grommets in both steel panels. the cable is hidden under the edge of the molding lip, until it makes a loop at the left hinge. It is then sticky-backed and tie-wrapped to the inside of the lid to the left side near the top. I used a hatchback mount made by Comet (diamond, ANLI, etc). The one I have allows you to tilt the antenna down with a twist of a thumbscrew. It's a bit 'mechanical' looking, but it works fine.

Antenna is a dr bob special dual-bander. The base is NMO-style, so any Larsen, Comet, Diamond or whatever will mount on it. My antenna is a 1/4 on 2M and 5/8 on 70cm. I have the mount moved down slightly on the hatch so the antenna just touches the garage door. Using the 1/2 by stacked 5/8 means getting out and folding the mast down. I bent a few good masts before I decided to go with the smaller antenna. YMMV, however.

Make sure the ground is good and your antenna is well matched. Users report spurious operation of the rear wiper and/or the rear amplifiers

on VHF if the system is leaky or reflective. A couple drain caps on the power feed wouldn't hurt either.

Control head is mounted on a cel-phone post attached to the console. It is assembled with a piece of aluminum from Home Depot, and has a place to hang the mike.

Worked fine since '92.

Good Luck!

dr bob

>Thanks! de KE6LBX

Suppose your decimal Long is 56.786 degrees: then

Answer = 56 degrees and 56.00 Degrees
.786 degrees = .786 X 60 = 47.16 47.00 Minutes
.16 X 60 = 9(.6) seconds 10.00 Seconds

And so: your final answer is 56 Degrees 47 mintes and 10 seconds -
(to the nearest second.)

What a ball I had running my Drake C line back in high school, during
the
sun spot peak I was in heaven. Seemed to me that was all I needed,
perhaps a 250hz/500hz cw filter set and a few accys to polish it up.

At Dayton this year I am taking my newly licensed son to find a radio.
While I completely understand the difference between bottles and solid
state, are the new kilobuck radios really going to do much for me?

Seems like they have alot of buzzers and bells but are they anymore
selective that an good C or B line Drake? I know tubes are getting
scarce but are there any for the C or B lines that are not available
anymore or are outrageous in price?

Please share your thoughts, I know the performance of the B & C lines
what I'm really concerned about are the price of tubes and availability.

RE: Factory installed radio wiring.

On the police packages I've seen the only thing you can get for the radio "wires" is a flexible metal tube about 2" in diameter that they run under the carpets and seats from the trunk up to under the dashboard. It allows the radio tech to pull the wires for the radio control head thru without having to pull out the seats and carpet. In many cases, there is so much wire for so many radios and other stuff that they wind up pulling the seats and carpets anyway. I'm not sure but I don't think they even offer police package options for the Explorer anyway.

A Drake B or C line would be a wonderful radio for a new ham. Tubes
can be purchased at ham flee markets and through various surplus
outfits at reasonable prices.

> Seems like they have alot of buzzers and bells but are they anymore
> selective that an good C or B line Drake? I know tubes are getting

> anymore or are outrageous in price?

Is a modern rig more sensitive? Probably not. Better selectivity? If it
has cascaded IF filters it probably does. This was a big improvement
in radios around the time the TS-930 came out. There are a number of
features that I consider to be nice, more than just "bells and whistles";
digital readout, speech processor, two VFOs built in, variable bandwidth
tuning, etc.

> Please share your thoughts, I know the performance of the B & C lines
> what I'm really concerned about are the price of tubes and availability.

If you start with a decent set of tubes I'll bet you'll be ready to buy
a modern rig by the time the first ones need replacing.

I have recently released my Shareware Callbook for distribution. It
is a complete and fully functional US Callbook that runs on any PC.
(386 may take up to a minute to find a call, 486 and higher 10-15 seconds.)

The callbook is updated up thru February 24, 1997 and includes many
of the recently released vanity calls. The callbook includes calls, names,
and addresses only. It is 24 megabytes to download and takes up 61 megabytes
on your hard disk.

Visit my website for more information: http://www.qsl.net/n7ln/callbook.html
or ftp it directly from ftp.qsl.net in the /pub/n7ln directory. Registration
is only $10. Read the file CALLBOOK.TXT first.

Come check it out!

In article <MPG.dbec64f187cc5f298984a@news.planet.net>,
Steve (KF2TI-Landing, NJ) <adell@mailhost2.planet.net> wrote:

Well, this is some temporary good news. But if I were the Korins', I would pursue it to the next higher level. If enough people make enough noise about these things, something will eventually be done, and it may not turn out all that well for the rest of us. We've seen some legislative motion in this direction already with regard to CB.

Kornienkos should turn off his damn amp every once in a while. He most certainly is radiating more power than necessary for most communications on any given open band - and in such cases would be in violation of FCC rules. You can work all states in less than a year with 2 watts, a ham stick, and no sun spots for chrise sake - and work plenty of DX too.

Busting pile-ups (i.e. radiating in excess of the otherwise appropriate power level so that you may transmit simultaneously on the same frequency and at the same time as dozens of others stations, and be louder than the rest of them put together) is not a charter goal of the amateur service. But the ARRL does give awards for doing this. Some stations are indeed on the "roll of honor" for conducting such activities. 1.5 KW is less than 9 db down from a typical AM broadcast band station, yet look at the disparity in siting requirements.

I don't know what kind of neighbors the Korins' are, but with amateurs thumbing their noses at their neighbors, and defiantly transmitting the legal limit and more deliberately to irritate them, and not seeking to help mitigate the interference they generate, we will inevitably see our privileges abridged as a result. All it takes is one bad apple (and the resulting court battle) to spoil the bunch.

This ruling (which points our the powerlessness of local jurisdiction) will not sit very well with many of the more despotic and tyranical city and state potentates who might seek to impose their own personal vision of esthetics and altruism. Wait 'till they start throwing around the expression "RF Pollution" and see where we get.

Thanks for bringing this to our attention Steve.

No. Your expectations from such a modest arrangement are not realistic. EME is one of the most demanding modes for hams. Although moonbounce can be done using a couple of Cushcraft boomers and some high power and a very low noise receiver at one end, a more typical setup is like this:

From 1990 to 1994 the AF9Y 2 Mtr EME station consisted of:

Antenna - 6 x 22 element, 42' Boom Yagis
Amp - 4CX1500, 1500 Watts Out
Preamp - MGF 1302, 0.25 dB NF
Tx Coax - 300 foot run of 1 5/8 Hardline
Radio - Microwave Module & ICOM 781

You have a lot of work to do, Masa, but you have to start somewhere.
Check out these links for EME information:

Read this on a mailing list, thought I'd share. Plug in the peoples of your choice.

Q: How many Internet usenet subscribers does it take to change a light bulb?

A: 1,331:
1 to change the light bulb and to post to the mail list that the light bulb has been changed
14 to share similar experiences of changing light bulbs and how the light bulb could have been changed differently.
7 to caution about the dangers of changing light bulbs.
27 to point out spelling/grammar errors in posts about changing light bulbs.
53 to flame the spell checkers
156 to write to the list administrator complaining about the light bulb discussion and its inappropriateness to this mail list.
41 to correct spelling in the spelling/grammar flames.
109 to post that this list is not about light bulbs and to please take this email exchange to alt.lite.bulb
203 to demand that cross posting to alt.grammar, alt.spelling and alt.punctuation about changing light bulbs be stopped.
111 to defend the posting to this list saying that we are all use light bulbs and therefore the posts **are** relevant to this mail list.
306 to debate which method of changing light bulbs is superior, where to buy the best light bulbs, what brand of light bulbs work best for this technique, and what brands are faulty.
27 to post URLs where one can see examples of different light bulbs
14 to post that the URLs were posted incorrectly, and to post corrected URLs.
3 to post about links they found from the URLs that are relevant to this list which makes light bulbs relevant to this list.
33 to concatenate all posts to date, then quote them including all headers and footers, and then add "Me Too."
12 to post to the list that they are unsubscribing because they cannot handle the light bulb

controversy.
19 to quote the "Me Too's" to say, "Me Three."
4 to suggest that posters request the light bulb FAQ.
1 to propose new alt.change.lite.bulb newsgroup.
47 to say this is just what alt.physic.cold_fusion
was meant for, leave it here.
143 votes for alt.lite.bulb.

approximately the normal type of response we've come to expect from the
no-coders.

> I suppose it would greatly suprise you to find that Bill, Gary Coffman,
> myself and many others who oppose CW testing as it now exists are, in
> fact coded, hams who ARE able to use the HF bands just any old time
> they please.

No it doesn't... I have maintained that the code is no major
impediment... if fact I've said many times that it's so easy that any
fool can learn... and from YOUR statement above YOU did. Proof!
A shining example.

> Jerry

Point is ... these no-coders that hide behind principles etc in order
not to upgrade but only bitch about the code are stupid, lazy, dyslexic,
possessed of a welfare mentality or some combination of them.
People who've passed the code and upgraded I am perfectly willing to
listen to even if they can't come up with any new arguments. Those that
think they should be given the full HF privileges just because they
want them are just plain sad 90's welfare mentality cases.

"I want it' don't cut it.

If this Ham radio is supposed to be something fun to do, and the HF
privilege desireable to have, then get the damn upgrade and keep
fighting to change, don't just sit in the middle of the floor and

shine.

Well, I get about $95 per classroom hour per class, and I can teach
as many or as few classes each semester as I please; thus I can adjust
my salary at will. I prefer working a 15-hour work week (five classes
each meeting 3-hours per week).

Maybe we could compare net worth. I get $1100 per month just in interest.
I'll let you calculate the principal given today's interest rates.

Maybe we could compare quality of life. I'm in the ocean swimming and spear-
fishing every day of the year, and sailing on weekends. I grade papers
while lounging on the beach.

Why don't we continue this battle on a chessboard? I'll start (and I'll
play white since the good guy is always white):

It used to be 146.94. Every new transceiver came with .94 transmit
and receive crystals. You could go almost anywhere in the country
and key up on either .94 simplex or .34/.94 and find someone to
talk to.

Yeah, I felt the same way about learning how to type, but the rewards one reaps significantly outweigh the time spent learning.

If you're a TV watcher, practice a bit of code during commercials. That should give you about 10 minutes per hour, or about 40 minutes per night.

You can also practice during your commute to and from work via tapes; it's no more of a distraction than listening to the car radio.

GREAT...Get one. The VHF is awsum and the UHF is also. Love the radio.
BUT..You must get the programing softwear also to make it the best radio
you ever owned.,

Interesting. On what vehicles was this offered? Ford's package now a
days, is just two 50 amp fused leads, dropping down under the dash on
the passenger side. (The portion of the package for radios etc)

Chevy no longer has a suitable package car available.

1084. Antenna Grease - Thanks

A couple of months ago, this thread on "Antenna Grease" was very active.

I would like to thank the contributers to it as by using their ideas, I have been able to write the following article for the April issue of the 'zine called Q-Bit, that I edit for our ham club - The Wellington VHF Group, otherwise known as Branch 74 of the New Zealand Association of Radio Transmitters.

The April issue will be printed on Thursday 17th, so you are seeing it before publication. You are welcome to copy it if you wish, but I would welcome a reference to Q-Bit if you do.

73,

Jim, ZL2APE.
Editor, Q-Bit.

SWR GREASE.

Amazing compound redeveloped.

There was once a remarkable product that was the old timers' standby. Apparently you could paint this stuff onto an antenna and it would some how cause the SWR to drop!

The recipe was made a military secret during the war years and has never been released. However, after many years of work in his basement laboratory, a product with the same properties was developed by a Thai amateur, Mu Ving Van, HT1APR.

Mu says that, liberally applied to an antenna, it corrects any mis-match, reduces the SWR to 1:1 and prevents antenna fatigue. It is great to use on your aerials on field days as it smooths out pile-ups and enables those stations you want to slide out from beneath them.

It used to be said that if an antenna didn't blow down, it wasn't high enough! Not any longer: SWR grease quietens the wind flow, like oil on troubled water, so that antennas coated with it can be used in the fiercest storms for emergency communications. As Mu's son, Di, said: "it `Stops Wind Reckage!'" (He was never very good at spelling).

A microwave dish coated with antenna grease will assist greatly to make satellite and moon bounce contacts. It improves the S/N ratio, and if painted in the appropriately handed "Yin-Yan" pattern, it improves the polarisation (L or R hand circular) selectivity. Mu also recommends coating the inside of the feed horn and wave guide to ease the signal path and diminish losses.

However, Mu says that it should not be used too liberally on antennas when running high power as it then too easy to pour excess power into the antenna and cause heating. Should the grease melt and run down the feeder, it will unfortunately cause excessive radiation at all harmonics of the transmitter output frequency.

Mu plans to market it in spray cans, with the cap on the can marked in units of SWR. Before spraying, you would rotate the cap to the desired reduction or increase in SWR.

Mu's initial samples of SWR grease were in the form of a cream. He was disconcerted one day to find his precious product missing and found that his wife Cara was using it for a hand and face cream, thinking that "SWR" meant "Super Wrinkle Remover". Also, Di confessed to using it with great success to cure his acne. Mu is thinking of selling it in a different package on the beauty market for these other uses.

Hans (and Roy),
was just reading about class E this am in the QST that just arrived,
(May-97) pp.39-42 "High-Efficiency Class-E Power Amplifiers -Part 1".
In case you don't get QST, it describes the construction of a 300 or
500 watt class E CW amp. They reference the Sokal and Sokal paper as:

"Class-E, A New Class of High-Efficiency Tuned, Single-Ended Switching
Power Amplifiers", IEEE Journal of Solid State Circuits, Vol SC-10,
June 1975, pp. 168-175.

I'm looking forward to the second part to learn more. I'm not
interested in even 300 watts, but I may look into modifying the design
for 30-50 watts.

1090. HTX-204 Can be modified

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-16 00:00:00 UTC
From: Les Alverson <docfester@mindspring.com>
Message-ID: <01bc4a16$0ebaf280$8daa45cf@junior>
Source record: 200309
Cross-posted to: alt.ham-radio.fm,alt.ham-radio.mods,alt.ham-radio.nocode,alt.ham-radio.vhf-uhf,rec.radio.amateur.misc

Below you should see a list of mods that can be done to the 204. ONE WORD OF CAUTION--DON'T DO THE HARDWARE MOD!! And why should you when you can do it by a software mod? This does work as I used it at a fire (I'm a volunteer fireman) to talk to our department and another sent for mutual aid.

This is from ADI's web site

AT-600 Modification

ADI took a novel approach to a MARS/CAP mod with their AT-600. The AT-600 may be expanded either through a keypad modification, or through a more traditional hardware mod. Why they decided to include the hardware mod I don't know. There is no difference in frequency coverage between the two modifications, so why anyone would want to perform the hardware mod is beyond me. Why cut out your radio's insides when you don't have to? I have included both mods for informational purposes.

NOTE: In the U.S. it is illegal to use this radio on any band for which it is not type accepted and on which you are not licensed. Perform these modifications at your own risk!

SOFTWARE MODS:

RECEIVE: To expand the receive range of the AT-600 first enter the menu mode by pressing (F) and (0 SET / SB) at the same time. Enter the following sequence of numbers: 1, 4, 6, 2, and 3. Turn the radio off and then back on. The receiver will now cover 100-199.995, 330-499.995, 830-868, and 896-999.995 MHz.

TRANSMIT: After performing the above receive modification continue with the following steps to access expanded transmit range: Enter menu mode by pressing (F) and (0 SET / SB) at the same time. Enter the following sequence of numbers: 1, 4, 6, 2, 3, 1, 1, 2, 8, and 9. Turn the radio off and turn it back on. The transmitter should now cover 100-199.995 and 400-499.995 MHz.

HARDWARE MODS:

MOD #1: Open the radio and remove Q220 from the printed circuit board. Replace the radio cover. Turn the radio on by holding down (F), (LAMP), and (5), and pressing the (PWR) button. The radio will now transmit from 138-174 and from 430-470 MHz and receive from 130-174, 350-470, and 900-985 MHz.

MOD #2: Open the radio and remove Q220 and Q221 from the printed circuit board. (You do not need to remove Q220 if you already removed it by performing Hardware Mod #1). Replace the radio cover. Turn the radio on by holding down (F), (LAMP), and (5), and pressing the (PWR) button. The radio will now transmit from 100-199.995 and 400-499.995 and receive from 100-199.995, 330-499.995, 830-868, and 896-999.995 MHz.

CELLULAR MODIFICATION:

To my knowledge there is no way to modify the the U.S. version of the AT-600 for cellular receive. The AT-600 was designed to specifically not support receive on these frequencies, although the European version of the radio (AT-600D, for "Deluxe") does have this capability.

A NOTE ABOUT THE HTX-204:

Yes, ADI also designed and manufactured the HTX-204 for Radio Shack. For all intents and purposes the radio is essentially the same as the AT-600. The two radios have nearly identical physical appearance, but they do have some slight differences in features: the AT-600 has more of them! (The AT-600 is also less expensive, folks.) For complete details check out AD7K's usenet posting!

If you are one of the unfortunates that bought an HTX-204 before you knew that the AT-600 was the same radio at a better price forgive yourself. Remember, Radio Shack has a 30-day return policy!

However, if for some reason you decide to keep the radio (or if it's already past your 30 day return period) you will be happy to know that the frequency expansions listed above do work with the HTX-204. So even though you won't able to sleep at night, you'll still have a cool radio to play with!

Well, your right. It doesnt have to be all that complicated. It's really as simple or as complex as you want it to be.
When an engineer or scientist ask 'How?" it usually boils down to mathematics - the universal language of science.
The "Tank Circuit" (who came up with "TANK"?) is indeed both parallel and series. Two elements connected as such can be described
either way. Connecting it (the Tank) in series or parallel can make it either a band pass or band stop filter. We can see this
intuitively by knowing the reactance vs.frequency . of the individual elements and imagining what happens at DC then at very
high frequencies, and when XL = Xc. This is fine for the guy that wants a general idea how a gizmo works - a tinkerer, (my advisor told me that
the third time I took differential equations!) if you will. Now, how do I DESIGN a circuit with certain characteristics.
Gotta know the math! Hence calculus, complex math, electric circuits, electronics, etc. Look at DeForest, the guy
invented the 3 element tube, but he couldnt figure out how to make it work. My guess is that his mathematical
model was lacking. It took Armstrong to come up with the regenerative receiver - a milestone in communications!

Happy tinkering!

How about a scheme where I could upgrade from tech + to general if
I take and pass the advanced theory test?

1096. El Toro,Calif Airshow needs radio volunteers

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-16 00:00:00 UTC
From: Richard <n6uzs@Xjuno.comX>
Message-ID: <33547A30.4DB@Xjuno.comX>
Source record: 200315

For anyone who lives in the Southern California area reading this I want to put out the word for volunteers. The El Toro Marine Corps Station located in south Orange County has a need for ham radio volunteers to staff the Medical Tents at the upcoming Airshow on the last weekend of April on the 25th, 26th and 27th.

For more info on how to volunteer contact the following:
JOE FAHEY, KA6LPZ @ 714-963-4426

The radio volunteer shifts are about 4 hours in length typically and you will provide comms to and from other Medical Tents at the show.

Many people are still needed so give Joe Fahey a call ASAP.

73 Richard.

Following are digests of articles printed in the January, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>Junk-Box Converters for Six and Two Meters
Author>Kreuter, Rod - W3ENK
Source>QST Jan 97, pp. 32-34
Abstract>Construction details for converters to enable HF radios to operate on either the 6-, or 2-meter bands. Construction is easy and no unusual test equipment is needed.

Digest>As radio gear has become more sophisticated and complex, construction has become simpler. This seeming paradox results from the fact that almost every kind of basic circuit is available, etched on silicon as an integrated circuit. Consequently, most ham radio construction projects are reduced to mounting a group of ICs on a circuit board and attaching the connections between them. The 6- and 2-meter converters designed and built by W3ENK are good examples of this.

The 2-meter converter takes received 144- to 148-mHz. signals from the antenna and converts them to 16- to 20-mHz. output that can be received by any HF receiver having continuous coverage; the 6-meter unit similarly converts 50- to 54-mHz. signals to 10- to 14-mHz. Both use the same basic circuit, with changes of the frequency-determining components, to cover the 6-meter band and 2-meter band, respectively; in addition, the 2-meter circuit contains a frequency-quadrupler circuit that is not needed for 6-meters. The components of each are four or five integrated circuit packages, a voltage regulator, an i.f. transformer, and a handful of passive components.

Construction is simple, and no sophisticated test equipment is needed to make them work. A complete schematic diagram and parts list is included in the article. Kits of all parts, except connectors and enclosure, are available from Q-Sat, P.O. Box 110, Boalsburg, PA 16827. The price of the 6-meter kit is $21.00 and the 2-meter one $24.00, both including domestic shipping.

Title>TA2:Refurbishing "Boat Anchors"
Author>L. VanTrooyen, K8KWD
Source>QST Jan 97, pp. 35-38
Abstract>Describes some of the techniques used to recondition antique radio gear.

Digest>Some hams find that they can save money by buying older gear and, perhaps, reconditioning it. Often, they can obtain performance nearly as good as that from the latest state-of-the-art gear, at a fraction of the cost. Then there are others whose interest is in really antique gear, not because they just want to save money, but because of nostalgia. K8KWD is one of the latter type. He confesses to a subconscious desire to "relive his youth", so is not interested in any gear less than 40-years old.

The author finds that, in most cases, the biggest part of the reconditioning job is cleaning. He describes some of the techniques he uses. In many cases, he can remove all knobs, meters and the entire

front panel. He likes to wash the knobs in his kitchen dishwasher. Washing the panel requires a cloth, water and detergent.

In some cases, the printing on the panel has been worn off and/or the paint is so badly chipped or scratched that the whole panel must be repainted. Photographs show the excellent results that he obtained in repainting a 2-tone Heath DX-20 panel, using paper stencils that he cut, himself, as masks when spray painting the second color on top of the first. He used dry-transfer letter decals for the printing, then sprayed the entire panel with several transparent topcoats.

Reconditioning the electronics requires a more delicate approach. The author uses a dry paint brush to loosen dust, dirt and grime, then an air hose to blow it away. When that does not do an adequate job, he uses WD-40 solvent, liberally applied, and blasts it away with compressed air. (Danger: use WD-40 only in open air!). For spots that are hard to reach, he uses a cotton swab soaked in WD-40, or alcohol.

After the components are all cleaned, he makes a few ohmmeter checks to find short circuits. After repairing any that are found, he applies a.c. power through a variable transformer, starting at about 40-volts. After the set has run for 2-hours at that level, he checks for and repairs overheated components. Then, raising the voltage to 70-volts usually makes all tube filaments glow visibly. After several hours at that level, and if no problems occur, he increases supply voltage to 100-volts and tries to operate the rig.

Most common faults are found in paper-dielectric bypass capacitors, electrolytic filter capacitors, and burned-out tubes. Replacing components in failed gear is usually relatively easy, because the components are large, interconnections are made by discrete wires that can be lifted and bent (unlike printed circuits!), and there is usually sufficient space to unsolder and solder a single lead without affecting surrounding connections or components.

Title>TA3:The Radio Mailbox
Author>Petruzellis, Tom - WA2ANG
Source>QST Jan 97, pp. 39-41
Abstract>Construction details for an audio recorder that will store voice messages. Designed especially to be attached to a receiver continuously monitoring a VHF/UHF repeater.

Digest>This article describes an electronic mailbox that will store audio messages. It is most suitable for use with a VHF/UHF transceiver that is left running continuously, tuned to a repeater. It contains a DTMF decoder/latch circuit. In operation, the user sets a four-tone code and gives it to all friends. When one of them wants to leave a message, they transmit the tones that activate the box and speak the message.

The user programs his DTMF by hard wiring jumpers inside the cabinet. Turning the Record switch to "On" readies the system for recording. Playback of messages is initiated by the Play pushbutton and can be stopped by touching the Stop button. An LED indicator on the front panel shows messages waiting. A "Reset" button clears the memory.

All circuitry is built on a single, two-sided PC-board. It contains twelve ICs and a handful of passive components. The article does not give a detailed description of the operation of the system. For such details, he refers readers to the article by K5FOG: "Chip Talker", QST Dec 91, pp. 17-22.

A kit, including only a PC-board, ICs, and crystal, is available from Tom Petruzellis - WA2ANG, 340 Torrance Ave., Vestal, NY 13850. Two versions are available: RM-1, which provides 40-second record time, is priced at $59.95; RM-2, providing 150-seconds, is $89.95. Both prices are exclusive of shipping costs. Domestic shipping is $4.00; Canada is $6.50. Shipping to other parts of the world requires the addition of sufficient funds for a 2-pound (0.9-kg.) package via a carrier to be specified by the buyer.

PRODUCT REVIEW (PR)

Title>PR1:Kenwood TS-570D HF Transceiver
Author>Wolfgang, Larry - WR1B
Source>QST Jan 97, pp. 73-77
Abstract>Performance review of Kenwood's latest medium-priced HF transceiver.

Digest>The TS-570D is Kenwood's latest entry into the medium-priced HF transceiver market. As such, it will replace the TS-450SAT. Like its predecessors, it does not contain an integral power supply and is physically small, about 11-inches (28-cm.) square and 4-inches (10-cm.) high.

Its small size does not connote limited features; it provides almost all of the features expected in a modern, top-of-the-line transceiver. Included are: two VFOs, numeric keypad for direct frequency entry, many memory channels, adjustable CW offset, various selectable-bandwidth filters; built-in antenna tuner; preamplifier and r.f. attenuator; an illuminated front panel display that includes a multi-function meter as well as frequency displays for both VFOs; fast and slow AGC; analog noise blanker; provision for control by a computer; and VOX.

In addition to the expected features, it also provides some new and unexpected ones. Among them are: two antenna inputs, selectable from the front panel; an electronic keyer; a push-button-activated automatic zero-beat tuning function; and a selectable fine-tuning function that cuts the tuning steps by a factor of 10:1. In the fine-tuning position,

tuning steps for CW and SSB are 1-Hz., rather than the normal 10-Hz.; for AM and FM, it is 10-Hz. instead of 100-Hz.

One of the most notable new ideas contained in the TS-570D is the so-called "Quick Memo" function. When one is tuning across the band and encounters a rare DX station, for example, its frequency can be recorded at the touch of a button. At any later time, the operator will be able to return to that frequency by touching another button.

When manufacturers put so many features into a small rig, they face big problems with front panel controls. Putting too many buttons, switches and knobs on a small panel can make it difficult to operate. Kenwood's solution is to put a moderate number of controls on the TS-570D's panel, and make many of them multi-functioned.

In one case, the reviewers felt they went too far. They put on one knob labeled "Multi-CH". It is used to adjust the level of many functions; which one is being set at any one time is selected by a pushbutton. For example, if the "PWR" button is pushed, the knob sets transmitter power output; if "MIC" is pushed, the knob adjusts mike gain. But if none of the buttons is pushed, turning the knob makes quick frequency excursions up or down the band in 10-kHz. steps! The reviewers found it "maddening" that, if they grab that knob by mistake, they may shift the frequency by 50-kHz., or more, with no quick way to return exactly to the previous frequency. This was the only really irritating problem that they encountered in operation.

Befitting a 1997 transceiver, Kenwood has included a Digital Signal Processor. In CW operations, it is easy to use the automatic zero-beat function to center a signal in the passband; then, using DSP, one can tailor the bandwidth to any desired width down to as low as 50-Hz. The high- and low-frequency cutoff points are separately adjustable so, on SSB, the filter "can do amazing things....often being able to reduce or eliminate interference from nearby signals", according to the reviewer.

The manufacturer's list price for the TS-570D is $1820. The actual street selling price is a very substantial discount below that.

Title>PR2:SCS PTC-II Multimode Controller with PACTOR-II
Author>Ford, Steve - WB8IMY
Source>QST Jan 97, pp. 77-79
Abstract>Review of a multimode controller offering Pactor-II, among other digital modes. It contains a DSP system for filtering, and other functions; the DSP can also be used by itself for receiver filtering.

Digest>Special Communications Systems (SCS), a German company, introduced Pactor (now known as Pactor-I) in 1991. It offered several improvements over the older digital modes then being used, primarily RTTY and Amtor. The most important new feature was the ability to use all ASCII characters. Other improvements were less visible but resulted in better performance on the air. The result has been that Pactor-I has

almost completely displaced Amtor, although venerable RTTY is still in common use by many hams.

Subsequent to the introduction of Pactor, two other modes, Clover and G-TOR, were developed. These offer high-speed data throughput and somewhat better performance during poor band conditions. They have been adopted by only a relatively small number of hams for specialized uses.

In the last two years, the German inventors of Pactor-I have developed Pactor-II, a highly sophisticated system using superior modulation methods, multiple subcarriers, and advanced compression means. Now SCS is introducing the PTC-II multimode controller that provides Pactor-II along with several older modes.

The PTC-II combines a complete digital signal processing system (DSP) with the controller to provide superior performance on all of its modes, even on RTTY. For pure communication performance, its abilities really shine when using Pactor-II. One reviewer described a Pactor-II QSO, in the middle of which a very strong RTTY signal came directly on frequency. Pactor-II practically ignored the QRM and the data continued to flow with almost no noticeable slowdown. Another reviewer was in a QSO during poor band conditions and the received signal dropped so far into the noise that it was no longer audible to his ears; but the data continued to flow!

For users whose transceiver can be computer controlled, two other sophisticated features are provided. One is automatic frequency control; i.e. it adjusts the operating frequency to follow any drift in the received signal. Second, it will automatically control power output and reduce it when signals are strong, and increase when they fade down. When the system is not being used for digital communication, it can be used as a general-purpose DSP for noise reduction, audio filtering, and other typical DSP functions.

The PTC-II is a deluxe piece of equipment, and its selling price shows it. The manufacturer's list price is $950. Prospective buyers will have to decide whether they think enough hams will adopt Pactor-II to provide an adequate number of QSOs on that mode; or if not, whether the performance features applied to the other digital modes are sufficient to justify the investment.

Title>PR3:Two Ultra-Accurate Clocks
Author>Micket, Robin - N1WAL
Source>QST Jan 97, pp. 79-80
Abstract>Describes two electronic clocks that contain VLF receivers and automatically adjust the indicated time by referring to time signals from WWVB on 60-kHz.

Digest>This review describes two clocks, from two different manufacturers, each of which contains a crystal-controlled clock and a built-in receiver that resets the clock periodically to sync with

60-kHz. time signals from WWVB. One is the Time Machine, made by Oregon Scientific Company, in Portland, Oregon; the other is the Zeit, built by Arcron-Zeit, of Oakbrook, Illinois.

Both operate from self-contained batteries and both use ferrite-core antennas. The Time Machine antenna is separate from the clock case, attached to it with a cable about 4-feet (1.2-m.) long. The Zeit antenna is internal. The reviewers tested both clocks from locations some 2000-miles (3200-km.) from the WWVB transmitter site, and found reception at night to be adequate for a daily reset.

The Time Machine is designed for use in the continental United States. The user must choose one of the four U.S. time zones, and the clock will automatically set its time for that zone. It displays "AM" and "PM", and cannot be made to display 24-hour format.

The Zeit also provides automatic setting to one of the four U.S. zones. In addition, it also makes provision for setting the "World Time" to any zone that might be desired, including Greenwich Mean Time (UTC). However, like the Time Machine, it cannot display 24-hour format.

The manufacturer's list price for the Time Machine is $99.95. Zeit's price is $149.95.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:A Mathematics Laboratory
Author>Nordquest, David A. - KE9ED
Source>QST Jan 97, p. 83
Abstract>Describes a versatile mathematics computer program containing 2500 scientific functions, equation solving routines, and other powerful tools.

Digest>Recent QST articles by W0IYH: "Mathcad 6.0: A Tool for the Amateur Experimenter", QST Apr 96, and W1IQW: "A Possible Alternative to Mathcad 6.0", QST Aug 96 described the use of mathematical computer programs in amateur radio design. In this letter, KE9ED describes a very powerful one called: Maple V. This software has 2500 built-in scientific functions; extensive programming, numerical and symbolic equation solving; two-dimension and three-dimension graphing; and editing- and type-setting capability.

Mr. Nordquest arranged with the publisher of the software to make a student edition of an older version available to hams for a much-reduced price. In fact, two different versions having somewhat different emphases are being offered. Maple V is "a fully-equipped math laboratory, able to support just about any calculation a ham might want to make". Versions are available for a Wintel computer, '386 or later, running either DOS or Windows; or else a MacIntosh running 6.07, or

later. It requires 12- to 18-mb. of space on a hard drive, and four megabytes of RAM, or more.

The other program is WorkPlace, which performs the same math done by Maple V, and also contains a scientific text processor. It allows the user to compose reports mixing text with math calculations and graphs, without any cutting and pasting. WorkPlace requires a Wintel computer, '386 or later, running Windows 3.1 or 95. It needs at least 30-mb. of hard disk space and 8-mb. of RAM.

Either program can be ordered from Brooks/Cole, (800) 354-9706 for a price of $37. Major credit cards are accepted.

Title>TC2:Mathcad 6.0 vs. Lotus 1-2-3
Author>Laroche, Roger - W1RMX
Source>QST Jan 97, p. 83
Abstract>A modern general-purpose spreadsheet program is about as useful as a dedicated mathematics programs for radio calculations.

Digest>W1RMX calls attention to a book: "1-2-3 for Scientists and Engineers" (Berkeley: Sybex), 1987. He found it valuable when using the Lotus spreadsheet for the radio calculations, as described by W1IQW's article in QST Aug 96. The book explains, among other things, how to calculate and display logarithmic data.

Title>TC3:Mathcad 6.0 vs. Excel V 5.0 and Complex Numbers
Author>Blanchard, Dennis - K1YPP
Source>QST Jan 97, p. 83
Abstract>Complex numbers are extremely useful in electronics calculations, and the Excel V 5.0 spreadsheet program can handle them.

Digest>K1YPP also cites the book: "1-2-3 for Scientists and Engineers". He points out that Excel V 5.0 can handle complex numbers. These are so useful in electronics calculations that he recommends, if one's version of the program does not provide for complex numbers, it be upgraded to a later version.

Title>TC4:450-Ohm Open-Wire-Line Velocity Factor: Not Always What You Think
Author>Witmer, Bob - W3RW
Source>QST Jan 97, pp. 83-84
Abstract>The velocity factor of open-wire-line of the "window" type varies greatly. Any antenna builder making tuned stubs or phasing sections should test the velocity factor of the line before cutting.

Digest>W3RW, when building a wire antenna that required phasing sections, found that the published velocity factor of 450-ohm "window" line was far from its actual value. When he tried line made by another manufacturer, it was again different. He strongly recommends that one

measure the velocity factor of the line before calculating phasing sections or stubs. To do this, one makes a quarter-wavelength stub and measures its resonant frequency, then calculates the ratio between that value and the length of a quarter-wavelength in space. The quotient is the velocity factor.

Title>TC5:Answering-Machine QRM
Author>Kolb, J. - W2NL
Source>QST Jan 97, p. 84
Abstract>A telephone answering machine caused strong electrical noise. The author prevented the noise from interfering with his computer by putting ferrite choke cores on the telephone and a.c. power lines.

Digest>W2NL describes how his telephone answering machine generated so much electrical noise that it caused his computer, a 120-mHz. Pentium running Netscape Navigator, to operate very slowly when downloading files from the World Wide Web. He solved the problem by putting one rectangular snap-together toroidal choke core (Radio Shack No. 273-104) on the a.c. line cord and another on the telephone cord. For good measure, he also put a cylindrical ferrite core (Radio Shack No. 273-105) on the a.c. line cord.

Title>TC6:Another Source of RFI
Author>Witmer, Bob - W3RW
Source>QST Jan 97, p. 84
Abstract>A wall-plug power adaptor was the source of severe RFI.

Digest>When W3RW went back on the air, after a period of inactivity, he noticed a "pulsing, 'swooshing'" noise covering sections of the 20- and 40-meter bands. After weeks of frustration from inability to find the source, he noted that his portable-computer power adaptor was plugged into the same a.c. with the radio. When he removed the adaptor, the noise disappeared. From this, he concluded that the charger is probably a switching power supply and/or a microprocessor-based circuit, both of which are possible sources of noise.

Title>TC7:An LM324 Trick
Author>Helm, Wilton - WT6C
Source>QST Jan 97, p. 84
Abstract>The LM324 audio-amplifier chip can cause crossover distortion. It can be prevented by the addition of one resistor in the circuit.

Digest>WT6C refers to the Technical Correspondence by Hanson: "RVS-8 Repeater Voter Audio-Amplifier Choice" QST Sep 96, that advised against using 741 op amps, recommending the use of an LM324, instead.

This letter points out that even the LM324 displays crossover distortion in certain circuits. It can be greatly reduced by the simple expedient of connecting a 1000-ohm resistor from the output pin of the op amp to

its negative power-supply pin, number 11. This prevents the operating current of the output stage from dropping to zero when conduction switches from one output transistor to the other.

LAB NOTES
Prepared by: ARRL Laboratory Staff

Title>LN1:Capacitor Basics
Author>Anonymous
Source>QST Jan 97, pp. 85-86
Abstract>A primer on types of capacitors and their uses.

Digest>This article is a primer on the different types of capacitors used in electronic equipment. Photographs show examples of air-dielectric variables, electrolytics, paper, mylar, polystyrene, disk ceramics, silver micas, and other types of capacitors that have been, or still are being, used.

It points out that paper capacitors were commonly used in radios until several decades ago. People restoring antique radios may find it necessary to replace some or all of the paper bypass capacitors they contain. Also, many electrolytic capacitors have a finite life and may need to be replaced.

With the exception of electrolytics, it is safe to utilize a capacitor with a voltage rating that is higher than necessary for the application. Electrolytics, on the other hand, should be operated at voltages no higher than, nor very much lower than, the rated operating value.

For filter capacitors to be placed across the a.c. power line, only capacitors specifically rated for that service should be used. DC-rated ones are not safe because line transients can reach ten or more times the normal line voltage.

There are three broad classes of capacitors in common use:
(1) Low-loss and good stability. These contain dielectrics made of ceramic, mica, glass, polypropylene, and polystyrene.
(2) Medium loss and medium stability. These are rated for high working voltages. The dielectrics include paper, plastic film, and high-K ceramics.
(3) Maximum capacitance per unit of volume. These are electrolytics made of either aluminum or tantalum.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:More on the Drift-Free VFO
Author>Makhinson, Jacob - N6NWP

Source>QST Jan 97, p. 81
Abstract>Two additions or modifications to the author's original article on the same subject in QST Dec 96.

Digest>This letter comes from the author of the article: "A Drift-Free VFO", QST Dec 96, and provides two hints for additions and modifications. The original article described a motion detector that opens the feedback control loop while the main tuning knob is being turned, but makes no comparable provision for tuning of the RIT control.

The detector is a notched wheel that is mounted on the frequency-control shaft and turns with the knob. A light/photocell assembly is set up so that, as the wheel turns, the "teeth" between the notches interrupt the light beam repeatedly. A similar wheel can be mounted on the RIT control shaft to duplicate the function when it is being tuned. A schematic diagram illustrates the circuit modification.

The author points out that the interrupter does not have to be a toothed wheel. The same result can be obtained by a transparent disk with toothed wheel printed on it in opaque ink. He suggests that the illustration that accompanied the original article could be photocopied onto transparent material, using a copier capable of making opaque lines, and a circular disk cut from it.

Along with the letter from N6NWP, Zack Lau - W1VT, an ARRL Lab engineer, adds two further suggestions. First, he recommends the use of high-Q chip capacitors instead of NP0 disks, and an air-dielectric piston trimmer that should work better than a ceramic trimmer. Second, he notes that harmonics of the crystal oscillator that fall within the r.f. tuning range may generate "birdies", i.e. spurious signals. If that should happen, one can change the crystal frequency and the ratio divider so that the harmonics do not fall within the band of interest.

Title>HK2:Broadband Matching for HF Mobile Whips
Author>Lewis, Robert W. - AA4PB
Source>QST Jan 97, pp. 81-82
Abstract>Mobile antennas on 3-bands had SWR of about 2:1. This was reduced nearly to 1:1 by the use of a 2:1 un-un made according to specs in Sevick's well-known book on baluns and un-uns.

Digest>AA4PB has an assortment of Lake View Ham Stick mobile whips for the 75-, 40-, and 20-meter bands. However, he found that with his antenna installation, the minimum SWR on each band was about 2:1, and this was high enough to cause the protective circuits in his transceiver to reduce output power. He reasoned that this shows that the antenna impedance is about 25-ohms at resonance on each of the bands, and a 2:1 un-un should reduce the SWR to nearly 1:1. So he built one in accordance with the information in the book by Sevick: BUILDING AND USING BALUNS AND UN-UNS. He found that it worked very well and now his SWR is 1.1:1, at resonance on all three bands.

Title>HK3:A New Status Indicator for the Handbook Deluxe Soldering Station
Author>Jacquet, Andre - F9OL
Source>QST Jan 97, p. 82
Abstract>Substituting red and green LED status indicators for neon-bulb type in the ARRL Handbook soldering station.

Digest>Every ARRL Handbook for the last few years has contained construction information for a soldering station that will provide two different voltage settings for the iron, one for soldering and the other for standby. A neon bulb is used to indicate the status; one electrode is illuminated to signify one voltage, and both are lit for the other. F9OL points out that it is not easy to see, at a glance, the difference between one and both electrodes being lighted, so he replaced it with two LEDs, one red and the other green.

A schematic diagram shows the circuit. A resistor in the circuit must have a different value depending on the wattage of the soldering iron to be used. A table of values is included to indicate the ohmage and power rating required for the necessary resistors.

Title>HK3:Automatic Transmitter Keying for Screwdriver (Mobile) Antenna Adjustments
Author>Lloyd, Tom - N5AS
Source>QST Jan 97, p. 82
Abstract>Add a circuit that automatically keys the transmitter, thereby activating the SWR indicator, when the operator adjusts the antenna loading coil.

Digest>Many mobile antennas incorporate a remote tuning mechanism driven by an electric screwdriver assembly to adjust the loading coil. This allows the operator to tune the antenna from inside the car. The SWR indicator must be watched during the process, so the transmitter must be turned on.

The author added a relay to the mechanism, activated whenever the screwdriver motor runs. That relay is connected to the CW keying jack, so it is keyed automatically when needed.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jan 97, p. 50
Abstract>Questions and answers on subjects of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: shielded balanced transmission lines; using an HF mobile antenna bumper mount to hold a 2-meter antenna; high receiver line noise; SWR metering at VHF; calculating dimensions for quad antennas; line losses in small-diameter coax; religion on ham radio; ham radio on the Russian MIR space station; and other subjects.

Title>NHC2:Never Say "Never"
Author>Hope, Sandra - AE4WL
Source>QST Jan 97, p. 52
Abstract>How a long-time ham XYL finally adopted the hobby.

Digest>Mrs. Hope, who has been married to a ham for many years, resisted becoming interested in the hobby until recently. But in 1996, she obtained a Technician Plus license, then successive upgrades all the way to Extra Class. In this article, she relates how and why she did it.

Title>NHC3:Heading in a New Direction
Author>Collier, Ken - KO6UX
Source>QST Jan 97, p. 53
Abstract>VHF and UHF simplex operation can be great fun.

Digest>Most hams who operate VHF and UHF use repeaters for the majority of their contacts. KO6UX points out that FM simplex operating can be great fun, and avoids some of the problems and frustrations of repeater operation. This article tells how to do it.

Title>NHC4:Upgrade Your Memory!
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jan 97, pp. 54-57
Abstract>It is relatively cheap and easy, after once learning to do it, to add memory to Wintel computers with '386, or later, CPUs.

Digest>This article points out that the prices of memory chips keep coming down while new software, needing more and more memory, is continuously being created. Tells how to add more.

Fortunately, for owners of computers that use CPUs of the '386, or later, series, it is relatively inexpensive to add memory to most machines. If one wants to run some of the latest software, it may be necessary, or at least highly desirable, to do so. The article points out that if one is running only a DOS operating system, it is possible to get by with 640-kb. of RAM; but from 1- to 4-mb. of extra memory would be desirable. With Windows 3.x, 4-mb. is the minimum required; 8-

mb. are highly desirable, and as much as 16-mb. would be useful. For Windows 95, 8-mb. is the absolute minimum; 16- is desirable, and as much as 64- would be useful. For Windows NT 4.0, those numbers should be doubled.

Modern computers use discrete chips only in the cache memory; the main system memory is packaged in Single In-line Memory Modules (SIMMS), assemblies of nine, or more, chips soldered into a holder. If a particular computer contains a motherboard that does not use SIMMS, before attempting to add more memory one should probably replace the motherboard. It is not as expensive as one might think.

The article contains a substantial amount of information, and photographs, about memory modules. However, the author states that one should have an experienced person show how the upgrade is done, the first time they try to do it.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Get Ready for Phase 3D!
Author>Ford, Steve - WB8IMY
Source>QST Jan 97, pp. 28-31
Abstract>The Phase 3D amateur satellite will revolutionize ham radio. Here are some details of how to get ready for it.

Digest>The Phase 3D amateur satellite that has been in the planning, design, and construction phases for six years, is now almost ready to "fly". The launch date, which has been delayed for almost a year because of problems with the rocket, not the satellite, is now rapidly approaching. When it is launched, it will certainly revolutionize ham radio! For the first time, it will be possible to work the entire world on VHF and UHF bands.

The "bird" will provide uplinks and downlinks on six different bands, from 15-meters to 24-gHz. It will support SSB, CW, and also digital communications at rates up to 56-kb.

The Phase 3D is, in some respects, a replacement for the OSCAR 13 that, for 8-years, provided VHF and UHF DX QSOs to a great many amateurs throughout the world. But the new satellite is a great step beyond OSCAR 13. To make optimum use of the older "bird", one had to have sophisticated gear, including high-gain antennas on two-axis mounts with computer-controlled rotators. On its 2.4-gHz. downlink, OSCAR 13 transmitted a single watt of output power; Phase 3D will transmit 50-watts to a 19-dB. gain antenna!

Furthermore, its orbit will be such that the satellite will appear at the same point in the sky, at the same time of day, every other day. Even a ham with a fixed, non-rotatable, antenna will be able to aim it at a spot in the sky and use it for a considerable length of time, every other day. Also unlike OSCAR 13, the new satellite's antennas will

always be pointed toward Earth and its solar arrays will always be facing the sun, receiving maximum power. Unlike atmospheric DX, all bands will almost always be "open", regardless of the sunspot cycle.

In every subsequent issue, QST will provide further information regarding the status, launch schedule, and other details.

Title>GI2:Long Live Cycle 23!
Author>Pocock, Emil - W3EP
Source>QST Jan 97, pp. 42-47
Abstract>The new sunspot cycle is almost upon us. This is a forecast of how it will likely develop, and the effects it will have on HF radio.

Digest>Every amateur who operates HF knows that the last sunspot cycle reached bottom in 1996. There has been no 10-meter DX, to speak of, for some time. Even 20-meters is only open for a few hours during the day. Now, it is almost certain that we have turned the corner, and conditions will soon improve.

Sunspot Cycle Number 23 (meaning that it is the 23d cycle since careful records have been kept and studied) is beginning. If the cycle progresses normally we can expect that, by the winter of 1998-99, 20-meters will remain open all night, most nights. Fifteen meters will be open in daylight hours, and 10-meters will be coming back to life. By the winter of 1999-2000, we will be near the peak of activity and the HF bands will be as exciting as they were in the late 1980's and early '90's. Once again, we will be working DX by both the "short path", and also the "long path", i.e. around the earth from the other direction. Occasionally, QSOs between North America and Europe will be conducted on 6-meters.

The article contains background information regarding sunspots, the ionosphere, and other aspects of solar activity that influence amateur radio.

Title>GI3:The FCC's New RF-Exposure Regulations
Author>Hare, Ed - KA1CV
Source>QST Jan 97, pp. 47-49
Abstract>The FCC bureaucrats issued an ill-conceived regulation regarding the safety to humans of radio fields. Now it has been put on "hold" pending rewrite, and a more reasonable method of implementation.

Digest>In late 1996, the US Federal Communications Commission (FCC) issued a new set of regulations regarding the safety of the electro-magnetic fields caused by radio transmissions. As the regulations were first announced, many hams interpreted them to mean that the operators would be required to measure, and report on, the field strength around their transmitting antennas, and other areas nearby. The regulations flatly stated that they would be in full effect after January 1, 1997. Since almost no radio amateur has equipment capable of measuring such

field strengths, some panicked and thought that this ruling might mark the end of amateur radio.

The ruling was issued as a result of studies made by scientific advisory groups over a considerable length of time, and amateurs were not the only people affected. Every facility that emits electromagnetic waves was equally affected. In issuing the sudden ruling, the FCC ignored normal procedures and acted in an unusually high-handed manner. The result was a storm of protest from all sides.

The ARRL filed a request asking that the effective date of the regulations be postponed by one year, and cooler heads began to prevail in Washington. As of the writing of this article, the original deadline has passed but no attempt has been made to enforce the rules. However, after the ARRL Laboratory staff and safety committee had studied the 180-page report and regulation, it became obvious that most amateur stations already are well under the exposure limits required. In fact, the FCC presumes that stations transmitting less than 50-watts, and mobile or portable stations using a transmitter with push-to-talk control, are intrinsically safe. Even high-power stations will probably have no problem if the antenna is at a reasonable height above the ground.

It seems clear that hams will be required to make an "inspection" of their own facilities to ensure that nobody is exposed to dangerous electromagnetic fields. The FCC is in the process of publishing one or more bulletins containing instructions as to how the inspection should be conducted.

The status of the regulations at the time the article went to press was still muddled, and will probably continue in that state for some time to come. Future issues of QST will continue to advise the amateur community of further developments, as they occur. But one conclusion is sure: this regulation will not mark the end of amateur radio!

However, since it doesn't work as a filter, then it should be discontinued. One does not cure the problem with even more application of an inappropriate remedy.

> I would be in favor
> of dropping the CW requirements but ONLY if replaced by a much more
> technical set of theory/operating exams.

For what purpose? Amateur certification is not a "worthiness" test, it is a means to ensure that amateurs will not interfere with other users on on the band. Even if the examinations were toughened, so to speak, the problems will still remain the same - most of the percieved problems is due to behaviour, not to lack of technical skill. That being the case, to what end would there being in having a tougher technical examination?

> Any time I have second thoughts about this I tune to 11 mtrs and to a
> lesser extent,2 mtr.Not much difference,at least in this area.

In so far as the CB band is concerned, trying to compare it to the amateur bands is like trying to compare apples and oranges. On the other hand, if the 2 metre band has devolved into something that is unpleasant, what are you doing to make it better. It is somewhat amusing that many of my amateur brethern make a lot of complaints, but depend on the government to fix all their percieved problems.

Can someone pls (nicely:) direct me to a reference in relation to the
basics of Morse code equipment. Specifically as to the design and
construction of the old style of electr mechanical sounders.
I have an understanding of general electronics, but i do not understand the
relevance of the resistance of the sounders used in the Morse system. As i
have been asked to rewind an old sounder, i need to ensure the resistance
as well as the magnetising force (gauss?)...is there a basic formula or
software tools to assist in the winding of such coils

Any help would be greatly appreciated....

Regards,
Dale

JUDGE SAYS RADIO SUIT IS OUT OF HIS HANDS

ARTICLE IN APRIL 16 EDITION NEW JERSEY STAR LEDGER
WRITTEN BY BILL RILEY

A Superior court judge ruled yesterday that FCC regulations prevent him from declaring that interference from short wave radio transmissions in Lafayette, NJ are a nuisance.

Leopold and Karen Korins sued their neighbor, Walter Kornienkos (W2WK), last year claiming transmissions from his 1,500 watt ham radio set were bleeding into their telephone lines, blocked television reception and activated their electric garage door opener.

Attorney Kevin Kelly, representing the Korins, asked Judge Reginald Stanton in Morristown to declare the situation a nuisance and direct Kornienkos to cut back on his hobby.

Kornienko's lawyer, Richard Clark, claimed his client had a right to operate under a federal license and maintained that the Korins could do more to shield their home from unwanted radio signals.

Stanton said Kornienko has been a licensed ham since 1967 and transmitted from his home since 1983 with the highest power permitted by the FCC for amateur radio.

"There is no question that there has been meaningful intrusion into the Korins' home and their expectations of enjoying a reliable and reasonably high quality level of telephone and television reception," Stanton said before noting that there was little he could do about it.

"The FCC controls just about everything to do with the operation of ham radios under very extensive and broad laws and regulations," he said, noting that government policy is aimed at encouraging the use of short wave radio for public safety and information purposes in times of disaster and to promote international goodwill.

"Is it a good policy? I don't know," Stanton said, ruling that he had no authority to limit Kornienko's operations.

"If he is obeying the FCC rules and the Korins can't fix the situation in their home, that's tough and they'll have to lump it"

Stanton said he is not being flippant, only cognizant of his lack of jurisdiction.

"There's not much room for anyone but the FCC to deal with something like this," he added.

Kornienko expressed relief at the ruling.

"Now I hope a normal life will resume in the Kornienko household"

Legend has it that when asked to describe how radio works, Albert Einstein put it this way: "You see, wire telegraph is a kind of a very, very long cat. You pull his tail in New York and his head is meowing in Los Angeles. Do you understand this? And radio operates exactly the same way: you send signals here, they receive them there. The only difference is that there is no cat."

Lets pretend...

I'm 23 years old with summa cum laude from MIT. It just so happens I'm interested in HF antenna design. BUT - I need to learn CW to get a license so I can experiment and get published.

Hello?

What's more important - SQL SERVER, Pascal, MS C++, RITTY or CW???

What "filter" do we need? Can I learn 20 wpm of CW and be an as*ho*e on HF like some of the others, or be able to experiment? Or do I "have to pay my dues" to a 19th century communications standard?

Bonus points: Suppose I know the Electrical Standards from 1910 Cleveland, Ohio? Do I get an Electrical Contractors license through the "Grandfathers" clause? If I know how to fix "Gas Lamps" can I be an electrician? Would you hire me? At $85/hour? Would this be a "filter"?

True but perhaps not relevant. With respect to telephone RFI (in my experience the most intractable kind of RFI) the FCC has found that there is very little correllation between power and interference, once the power is above a fairly low minimum (less than 100 watts).

I have experienced incredible telephone RFI problems when I was using just 100 watts. If the lines and receivers are not properly shielded, there appears to be very little the ham can do to prevent this sort of interference, short of buying the neighbors all RFI-proof telephones, an impractical idea indeed.

Incentive licensing, in a word, sucks. Why do we need all these different levels and exams, anyway? What other hobbies have exams for the sake of exams? Sure, private pilots have different license classes, relating to the size of aircraft, IFR or VFR, etc., but this is purposeful, related to safety. Our hobby has different levels and a multitude of exams for no good reason at all. It sure hasn't invigorated our hobby.

A newcomer to this hobby is confronted with a seemingly endless ladder of exams on the horizon. Doesn't sound like much fun to me. Why can't we simply have a license exam that insures that the newcomer can operate legally, competently, and safely, and leave it at that. If the knowledge gained from studying for higher license classes is truly worthwhile, people will learn it anyway.

ARRL had this neato picture of all these happy hams, busily buying League licensing publications en route to upgrading. Instead, people dropped out of the hobby in droves, never to return. It seems to me that many or most of the no-code techs are dropping out too, discouraged by the hassles inherent in getting decent privileges.

Hey, I'm an extra myself, I got no ax to grind. But I disapprove of incentive licensing. Novice (to get people started) and General are all we need.

My sincere apologies to Walter Kornienkis W2WK for using him as a scapegoat in my post. He would appear to be the victim in this particular instance, rather than the perpetrator.

My frustration stems from also being a victim - a victim of circumstances that I did not create. There are indeed amateur radio operators who abuse their privileges in total disregard of others. It is toward those, who have helped to create an increasingly hostile environment in which a ham radio antenna is considered an eyesore - an undisputable source of every imagined type of interference, that I hold my anger.

I resent those who have abused their privileges to the point that I can no longer enjoy mine as fully as I might otherwise, and I fear we have only seen the begining. The judge's disappointment in being forced to decide in favor of the ham in this case is a depressing state of affairs.

Agreed. Normally every package vehicle has all those things, but
insofar as the electrical, I have never seen one with a tube for the
wiring from the trunk.

You are TXing on some input frequency! How can that be a problem. No
one owns a frequency. I'm not antisocial just matter of fact....Jim

In article <33560F69.55A0@sullivan.vf.mmc.com>, Jack
<@sullivan.vf.mmc.com> says...
> 4) I don't think Kornienkos is thumbing his nose at his neighbors.
> His station is probably as clean as it can technically be made to be.
> He more than likely tried to work with the neighbors, who probably
> didn't want his help. As long as he's operating within legal
> parameters, I see no reason why Kornienkos can't run QRO.

For the record. Walter's location is almost perfect. Atop a hill over looking much of western NJ and eastern Pa. He runs usually no more than a few 100 watts. The issue is and will be the fact that his amp can produce 1500 watts. It was never determined that he was ever running full legal limit. The assumption is that if it's available, he has it at his disposal. Sort of like buying a Mustang 5.0. Just because it can go 130 mph doesn't necessarily mean that the owner is going to go 130 mph.

As far a thumbing his nose. Walter did not instigate this lawsuit, his neighbors did. Walter was simply defending himself. If James wishes to condemn someone from doing that, maybe he should time travel back to the good ol days when you could hang people has witches. The point of the article is that a Superior Court judge ruled that he had no jurisdiction over this matter. Plain, simple.

Walter offered to replace (at his expense) the Korins twinlead with double shielded coax and the problematic phones. In both cases, the offers were refused. The Korins have stated that they want Walter off the air, period, end of sentence. This being the case, they deserve anything they get. Personally, from what I've heard, their complaints are largely hearsay with little if any documented technical proof

What it boils down to is, here you have a man who bought a home in a rural area, put together a station and then had some people move next door, knowing that this is in their vicinity and begin to complain. In Central NJ there is a group of people who bought $500,000 homes next to a small airport who are now suing the operator stating that the airport (operating since the late '30's) is destroying their quality of life. OHHH TOOO BADDD POOR BABIES.

They get what they deserve

>Breaking pile-ups is nothing more than consentual deliberate interference
>- gaming, parading one's electrical prowess.

I STRONGLY disagree with that assessment. (in most cases. There
are a handful of people who jump into a pile just to prove they can
break it, but they're a small minority.)

Pileups are a natural result of supply and demand. Just as the
interstates become clogged when everybody decides they need to go home
from work at 5pm, a ham frequency will become clogged when everybody
decides they need Bouvet Island for DXCC. Simply going away and
working a German or Canadian instead is not an acceptable replacement
for most of the entrants. (would you voluntarily hang around the
office until 6:00 to ease the traffic jam?)

As has been suggested by others, the real problem lies with CHEAP
consumer electronic companies. Other services are suffering too.
Broadcasters find it difficult to impossible to install needed towers.
(some of your local TV stations may disappear as a result of this,
coupled with the new DTV program which will require them to install a
second transmitter) Cellular-phone services are overloaded because
they can't build necessary towers. I've even heard of neighborhoods
rejecting local police stations after they discovered a police-radio
base station tower was necessary!

If radio amateurs are lucky, the coming proliferation of wireless
Internet access, PCS portable phones, cellular LMCS terrestrial
wireless cable, paging, cellular, digital broadcast TV, and other
commercial transmitters in the home will force consumer-electronic
companies to shield their junk. If we aren't lucky, consumers will
blame commercial interference on us...

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/records.htm

1126. Drake SW8 any good?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-17 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970417232401.TAA09446@ladder01.news.aol.com>
Source record: 200147

I would like to hear from anyone who ownes the latest version of the Drake SW8. What do you like and not like about it? Does it still only tune in 50khz steps? How good is the syncro detection? Any info will be greatly appreciated!

1127. Antenna grounding /// Communications vocabulary

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-17 00:00:00 UTC
From: skortny@aol.com
Message-ID: <19970417232400.TAA09456@ladder01.news.aol.com>
Source record: 200148

Hi Everyone,

Pleasure reading (when I get the opportunity) this NG. Pleasure reading all the opinions expressed within.

I have a question involving antenna grounding.

Would the following description qualify as a ground and does anyone see any
problems created by setting up an antenna ground in such a manner:

Instead of driving a copper rod into the earth and attaching a ground wire

to same, or attaching a ground wire to a water pipe, I was wondering if running the wire to a ground stake placed in a 55-gallon drum of wet earth

or simply water or oil would suffice.

Secondly, most likely using the above configuration, I'd like to know if a

"junction box" setup would be able to be used where I would attach multiple
ground wires running from different antennas to a metal grounding block (a

pipe, for example) and then have a single drop-wire running to Ground as described in paragraph one.

I hope I've described my idea and questions clearly.

I thank anyone and everyone in advance for any information they would provide.

While I have your attention, allow me one more:
Re: nine-er as opposed to nine.

I have posed this question to a number of people, but have never received an answer other than that it is used for the same reason the phonetic alphabet is used: for clarity during TX and RX.

Why is the number 9 spoken as nine-er?
I was told simply that it is so that the number 9 is understood and not confused with a similar sounding word such as "fine."

My question: Why is the number 9 singled out when other numbers can be confused with similar sounding words?

Thanks again.

Ham radio is a rather popular hobby with mmbers of the entertainment industry and the number of hams in our industry in growing far faster than the national rate. I think its because it offers many a way to be involved in the general public while keeping their anonomity. Kind of the same as the acress Sandra Bullock admitting in interviews that she is a "net surfer" but to date she has been able to stay unknown because her net-name in no way reflects her true identity.

As to Gary Shandling. I never met him but the story I have heard -- from rather reliable sources in the entertainment industry -- is that Gary is a ham, but values his privacy and personal life to such a degree that he will deny being a ham to anyone who might ask. Obviously, there is no way to prove this, but it makes a lot of sense to those of us even phiriphally involved in it. (I am with a local Los Angeles TV station allied to its news department the last 18 years.)

Also, there are a number of other well known "entertainers" -- young to old -- some of whom I do know -- that are hams under their "real names"

but who keep their involvement in ham radio a secret -- again to keep their private life separate from their rather public professional careers. For this reason I will not go any further, but I will say that you -- or your child -- might be watrching hams perform on TV more than one day-- or night -- a week.

1132. Re: FS: H-P 95LX Palmtop PC for Portable Packet

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-17 00:00:00 UTC
From: Phillip Nichols <maccabeus@gatecom.com>
Message-ID: <3355A44F.795B@gatecom.com>
Source record: 200185
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Dont be fooled by this... I wrote the Mar QST article and used
a 200LX. the differences are plenty. The 95 has only a 40column
width screen which will cause some problems running some of the
software I mentioned as well as not being entirely graphically
compateable. Even the 100LX is not fully CGA.

If you want to do what I did AT LEAST get the 100lx but it has
some bugs that youll not like. Go for the 200LX while you
can (this guy probably is if hes smart but dont let him tell you
it was featured in my article because I dont want email from someone
asking why his 95lx wont do it right).

A good used 200lx will run $350- $00 depending on condition.
My dad is selling his with 1200Bd modem and 5MB FLASHcard
for $500. I will include the BP-TNC and install the
software for $50.

I dont care if you dont buy my Dads HP but dont get a 95lx for
packet. I expect I will be flamed tommorrow but a few flames
are better than explaining to people why they cant do it after
they bought it.

1133. Dual Personality of Burt Fisher

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-17 00:00:00 UTC
From: kovar@zeus.ia.net
Message-ID: <5j4sn5$ff2@hera.ia.net>
Source record: 200186

I see Burt cross dressed of half Grim Reaper and half Ogar

under the bridge.

With indepth thought referenced to the following:

The Ogar under the bridge made his living scaring people as they crossed

over the top. His thought of gaining control over their thoughts gave him

sense of pride and power.

The Grim Reaper lived only to announce negative and dying concepts of life.

He attempts to steal your dreams and hopes away.

Sorry Burt, I have grown up on green side of the fence.

Ham Radio has opened so many doors for me. True friends, Jobs, Technical

talents, Fantastic Vacations.

It is a developed bond similar to a good marriage.

I just can not seem to share your pain.

I am sorry you have not been able to put your heart into your hobby and

reap the many rewards.

Cheers!

A couple of weeks ago I took part in the Shannon Erne Waterway Armada - a joint venture between EI and GI clubs to activate some rare squares. I`ve just got the photsos developed and put some of them onto the WWW. Feel free to have a look around - any comments appreciated.

Just go to http://www.geocities.com/SiliconValley/Park/7260

And follow the links to the local events calender.

I`ve just finsished operating the Ulster Titanic Society special event station so if there` s any demand I can poduce pics for that one also.

73 De Keith GI0SSA.

1137. Thank you! Here's my story on how it happened.

I want to thank ALL of you for the very interesting suggestions on how to correct my small penis problem! There were some very creative ideas that were brought out in some of the emails.

The one about the tweezers and the can of pepper was quite funny! But you see I have already tried that one! Pinched my penis with the tweezers and man did it hurt! I didn't even know a penis could sneeze!

And all the other ones about putting my penis in various places were very brilliant. But you see that would be nice, but I can't find it! It all started when my gut started to streach over my belt. People have told me its from to much hamfest food and plenty of beer parties in my travel trailer. I don't know about that part about the travel trailer, you see I only have beer parties outside of the travel trailer when I bring it to hamfests. Not enough room to swing my gut around. But thats going off in another direction. Well you see it kept getting harder to find the little fellow when I had to take a piss at the hamfest bathrooms. Pretty bad people said to me when I couldn't even find my penis because I couldn't see around my gut. But I told them to mind their own business in between bites of my hamburger and fries. I said that they really should try to keep track of their own problems wherever they might be hiding! Anyway it finally reached a point where I could set my gut on the back of the toilet and just kind of aim without even looking! Pretty cool huh? If I heard a splashing sound I knew I was making it into the bowl.

One day I noticed that my gut had finally reached down to my knees. Believe me its a real pain to operate a radio with a couple hundred pounds of fat laying on the table staring at you waiting to be fed. There I was working a station in Turkey and I had to take a piss. So I reached over and got the dolley and set it under my massive gut and wheeled it and me toward the john. Finally got my gut to balance on the back of the commode and tried to aim...nothing....nothing at all! Not even a trickle! My litte fellow had been absorbed! You know just like those Borg things on Startrek. Well it scared the crap out of me (that part still worked ok) and I thought my good friends here on rec.rado.cb could help me find a way to bring my little buddy back!

By the way, the one about a penal pump sounded pretty interesting, where could I find one of those things. A gas station?

Please I need suggestions on how to bring the little guy back!

PLEASE EMAIL ME WITH ANY IDEAS!!!!

You've forgotten the folks with sideswipers, and such, who don't have self-completing dashes/dahs, but now I suspect most of the people on here, who advocate cw couldn't send 30 wpm with a key either. I can't, but then again I can at least use a straight key up to about 15 wpm or so. Above that, no matter how I adjust the key, I seem to get "glass arm", and yes I know about setting the side tension properly so that there is some slop in the key. -art clemons-

Jim:
1) We as hams need to stick together on this and not fight amongst
ourselves as you are doing with this statement. Where it should be
pursued is with the manufacturer's of the phones and televisions;
they are the ones acting as 'illegal' or non-type-accepted receivers
for the frequencies hams use.
2) How do you know this statement to be true? It is possible to cause
rfi with qrp; you don't need an amp.
3) Busting pile-ups may not be a part of the ham radio charter, but it
is just one facet of this great hobby of ours. Just because you
either don't do it, or can't do it, doesn't mean that someone else
can't do something they want, as long as they are operating legally.
4) I don't think Kornienkos is thumbing his nose at his neighbors.
His station is probably as clean as it can technically be made to be.
He more than likely tried to work with the neighbors, who probably
didn't want his help. As long as he's operating within legal
parameters, I see no reason why Kornienkos can't run QRO. As I said

in #2, QRP can cause rfi. Pop open the back of almost any modern TV
and you'll see that there is NO shielding inside!

I guess, based on this response, AC6XG knows a lot about Walt, K2WK. Then
again, maybe not. Yes, Walt is a contester and DX'er. That's why he found
and bought a home on several (I forget how many) acres in remote and rural
North West NJ to build a modestly competitive station. He eventually got
his tower up -- WITH FULL TOWNSHIP APPROVAL. Unfortunately, a couple of
nasty, pushy people relocated from CA and bought the house next door. They
have made claims of interference to their telephones, TV and their garage
door openers. Walt tried to work with them and was supported by other
local hams. However the neighbors have totally refused to implement any
of the FCC-published recommendations to fix these problems. Instead,
they have harassed Walt and his entire family in numerous
ways (suits still pending??). They have sued the town for approving
his tower. I read their technical expert's report and found it interesting
they he found NO direct evidence of TVI. Walt's neighbors did play the expert
a video tape with interference, but he could not duplicate it while
transmitting on any band or mode even operating with 1500 watts out!

Being sued by vindictive wealthy neighbors is a real threat to all hams (well,
MAYBE not to the shack-on-a-belt types). It doesn't matter what your
particular interests are (e.g., contesting, ragchewing, SSTV, etc.). In
today's society, all it takes is one jerk who decides he doesn't like YOUR
hobby to make your life miserable unless you cave in to him/her. (The
local paper recently ran a story about a guy with 20 racing pigeons in an
upscale semi-rural town whose neighbors were fighting him keeping the
pigeons on his multi-acre property!) Walt and his family have been through
a lot (financailly and emotionally) just so he can operate a stations that
is FULLY legal under Federal, State and local laws.

By the way, if anyone bothered to look at the last SS CW results, you'd have noticed that Walt did bother to turn off his amplifier long enought to make 80K points running low power.

Come on, get real. We are legally entitled to radiate up to 1500
watts. The fact that the FCC takes a hands off attitude with reference
to electronic equipment in the house and interference does not mean we
should tuck out tail between our legs and hide.

I operate 75 phone with a group that extends from Maine to Florida.
You can no more join in such conversations with 2 watts than you can
fly off the Washington monument.

Problem is obnoxious attitudes like yours can and will result in the
laws being changed and becoming much more restrictive.

Yes, I know what you mean. However those were not manditory contacts,
were they?

In fact, there are at least three countries (BY1PK, 9M2HO,
>9M6TCR) that would be in my log if I had QRO; all three copied the
>W9.. (and there was noone else calling) but just couldn't pull out the
>rest.

Yes, absolutely. Your story is not unique. Sometimes the path just isn't
there, or the antenna is too small, or the guy on the other end has QRM,
or a crummy receiver - or is an ALLIGATOR. The more power you run, the
better chance you have of not even hearing the stations who can hear you.

>I enjoy DX and contesting. I don't enjoy RST/QTH/NAME QSOs with
>people 300 miles away. I don't enjoy trying to run a ragchew with
>someone with a 339 signal. I've tried VHF FM and packet (and can see
>where some might like it) but haven't got into it either. Being
>restricted to QRP would erase my interest in amateur radio.

Sounds like there are more things you don't like about amateur radio than
things you do like.

>In brief:
>-- QRP is not a solution for everyone. It's a good subhobby for those
>who enjoy it, but it's not a universal fix for everyone suffering from
>RFI.

I of course did not make any claims to the contrary. What I do claim is
that too many ops run considerably in excess of the necessary power.

>Cooperation is cricital, on BOTH sides. The amateur must be
>willing to help apply appropriate anti-RFI measures -- and the person
>suffering RFI must be willing to allow those measures to be applied.

I agree. It's just that too many operators seem to forget that with the
privilege of operating 1500 watts comes a responsibility to operate without

generating interference to others. They seem to take the attitude that the FCC says I can run 1500 watts, so nobody is going to stop me. This is not a cooperative attitude, and it is one that will ultimately lead to problems for us.

tnx and 73,

Used to be the general public count not purchase a new auto with a
police packageas. The auto manufacturers would not sell that package
to you. that may have changed these days.
Generally there are provisions for radio wiring, better suspension,
engine, transmission, alternator etc. The police packages I've seen
were also real well bonded, so an HF radio sould work great also.

I tried to speak the truth Jack. Sorry you took offense to it. I agree
we should not fight amongst ourselves - I was not fighting, just making
some observations. The sooner we see the writing on the wall, the better
off we will be as a lot. We cannot continue to be a burr under the
saddle to those in our communities indefinately. We must actively work
toward engraciating ourselves to our neighbors. We are out numbered.

>2) How do you know this statement to be true? It is possible to cause
>rfi with qrp; you don't need an amp.

I'm sure you're aware of the relationship between ERP and and signal
strength. Yes, it's true - to every rule there is an exception, but in
general, the higher the power, the higher the probability of RFI.

>3) Busting pile-ups may not be a part of the ham radio charter, but it
>is just one facet of this great hobby of ours. Just because you

Breaking pile-ups is nothing more than consentual deliberate interference
- gaming, parading one's electrical prowess. Not something that
would necessarily substiantiate a need to use 1500 watts to anyone
outside of amateur radio.

>4) I don't think Kornienkos is thumbing his nose at his neighbors.

Well, as I've read ahead to the other posts by now, his neighbors needed
to have a nose thumbed at them. In general though, it's not a practice
which will endear us to those who hold the power over us.

What needs to be done is to make consumer devices that have reasonable
immunity to RF, not legislate hams off the air. The FCC has dropped the
ball on this one.

> disparity in siting requirements.

I think you're jumping to conclusions. We have no idea what the situation
is. Who said he's a DXer? Maybe he's a contester, a traffic handler, a
ragchewer, who knows? The article didn't say. Sounds like you are anti DXing.
Not all DXers run high power.

I have a neighbor that goes ballistic if he gets interference one time a
year. I used to wipe out cable channel 18 for blocks around with only *one*
watt on 2 meters. Am I supposed to stay off of 2m because the cable system
is messed up?

With almost every RFI problem I've had over 27 years the neighbor was totally
unwilling to do anything with their equipment to solve the problem. They
just wanted me off the air. It sounds like this might be the case with
these people who sued. Fortunately it doesn't work that way in this country.
I, for one, am glad to see the judge recognized this.

After seeing that Walt had tried to work with his neighbors to fix there
'unproven' interference problem I'd say it's time for Walt to sue for damages,
harrasment, infringment upon his rights to freedom of speach, and anything
else a smart lawyer can come up with. The ARRL should be backing him too
if they really use their legal department to protect the rights of hams.

I noticed that too. There is a larger point though. I'm sure you know
the type - they're on the air every night, and they never have the amp off.

>Staying within legal limits is defiant?

Staying within the legal limits is manditory, and is beside the point
here. Using in excess of the necessary power is the point. Making no
attempt to use your station with prudence, or mitigate the interference one
may cause is defiant.

>>...and more
>
>Who? The defendant? The beginning of your sentance implys as much.

I applies to anyone to whom it applies. I don't know the defendant, and
my remarks are not necessarily directed toward him. They are of course
directed to r.r.a.p.

: > Hello. I was testing moon bounse and see if I could get
: > someone out there, but it failed. I have 2M 45W output with a small
: > antenna. do you think it is good enough ?
:
: No. Your expectations from such a modest arrangement are not
: realistic. EME is one of the most demanding modes for hams. Although
: moonbounce can be done using a couple of Cushcraft boomers and some high
: power and a very low noise receiver at one end, a more typical setup is
: like this:
:
: From 1990 to 1994 the AF9Y 2 Mtr EME station consisted of:
:
: Antenna - 6 x 22 element, 42' Boom Yagis
: Amp - 4CX1500, 1500 Watts Out
: Preamp - MGF 1302, 0.25 dB NF
: Tx Coax - 300 foot run of 1 5/8 Hardline
: Radio - Microwave Module & ICOM 781

IMO this setup is a bit better than typical.

To make an initial few contacts with the big stations you can just get by with the following. A single long yagi with ~30 foot boom (CC 17B2, M^2 2M5WL, etc) mounted horizontally and a 160w brick. A low noise sensitive receiver with a low noise preamp mounted near the antenna will help alot. With this setup you could work some of the big guns like W5UN, KB8RQ and SM5FRH on a schedule at your moonrise/moonset. You would need to have an idea at what elevation angle your antenna has lobes and have a fairly clean shot at the horizon. Antenna modeling programs can get you fairly close on figuring out where the lobes are located. I made my first few 2m EME contacts on a single Cushcraft 17B2 with 1200w output and no preamp. Programs using MiniNEC and NEC were almost right on in predicting the angle of my lobes (I have flat ground and no obstructions). On 2m EME contacts are almost exclusively CW as signals are generally very weak.

With two ~30 foot boom yagis and 1KW (with elevation control and preamp) you will be able to hear your own echos most of the time. I would pretty much consider this a entry level serious EME setup. With four 30 foot boom yagis and 1KW+ you get into the class of station that can to call CQs and effectively make random QSOs. I would consider this a typical/average 2m EME setup.

The best of the newer radios have a higher intercept, and a lower
noise floor. You really can hear more with them than with the old
Drakes. Other than that, the C line are still fine radios. Tubes are
getting
harder to find, but there are still enough of them out there to keep
you going for a while.

>What needs to be done is to make consumer devices that have reasonable
>immunity to RF, not legislate hams off the air. The FCC has dropped the
>ball on this one.

Very good idea. I want that, too. That would be the right result.
However, subject to the Constitution, ham radio is only a privilege
and we exist because of the will of congress [the people].

Do you suppose for one minute that the majority of
Americans, given all the information, would choose to pay a little extra
for all their consumer electronic devices just so we hams can operate
without bothering them? I suspect not, but you may be more optimistic.

Ham Radio is NOT A CONSTITUTIONAL RIGHT. If the majority
in congress decided one day, because of all the irate citizens (who
LOST in court because we hams were legally "right") wanted it - they
could legislate us right out of existence. No more ham radio by an
act of congress. No Court could save us. It is the will of the people.
We NEED the sympathy of the majority of citizens by and large to keep
the hobby going. I think that is the point being made here.

The specific case we discuss here is not important to the point.
This ham could be a very nice fellow
and the neighbor a nut case just trying to hassle him. That is wrong,
and I am glad for the result. BUT, if we have LOTS of these cases going around
where the neighbor gets real angry and it spreads, we have a real
problem on our hands, even if they are malicious, technically
incompetent, and vengeful neighbors. They can put pressure on the Federal
government just like the good, harmless, technically competent ham
community can. Unfortunately, the non hams outnumber us vastly. We
need to remember that, that's all.

>With almost every RFI problem I've had over 27 years the neighbor was totally

>just wanted me off the air. It sounds like this might be the case with
>these people who sued. Fortunately it doesn't work that way in this country.
>I, for one, am glad to see the judge recognized this.

See above. I understand the anger, since we hams are by and large a
very good lot. However, if we get enough of those neighbors and they
learn to hate us enough, we are history, even if we are completely
right. That is the hard lesson of Jim's post here. Be happy that
we are technically correct. Try to fend off nasty neighbors. BUT

remember that any effort to keep neighbors happy (even when they are wrong) helps to preserve our hobby.

I don't know if I can agree with the assumptions you're making, Mr. Kelly.

Whether realistic or not, Kornienkos has a license to use 1500 watts. He should be allowed to use it. Like you, I get the feeling that most of the RF power may not radiating from the antenna as much as from his coax. But that's just intuition. We don't know the details of his station, so we can't really pass judgment as to whether the antennas, and the power he uses are appropriate or not.

Another thing: his antennas might be limited by covenant, or city ordinances. His neighbors may also be real cheapskates who will never spend any money to get rid of RFI.

It only takes one obnoxious creep to end up in court. We don't know who was being the creep in this case. It could have been either or both parties. Legality alone does not make one a Gentleman or a Lady.

What I find scary is the judge agreeing with the plaintiffs but making the statement that "his hands are tied." Would he have said the same thing had it been an AM broadcast station doing the RFI? I wonder...

>I guess, based on this response, AC6XG knows a lot about Walt, K2WK.
>Then again, maybe not.

I'll save you the trouble of guessing - I don't know Walt. But then
again, why would I have to know him in order to make a general observation
about the state of current political climate, and the habits of a
signification fraction of the ham community? There was a larger point
being made there. Your sensitivity on the subject perhaps prevented you
from taking note of it. Walt's unfortunate circumstance points out a
problem that I perceive awaits us on the horizon.

I am, like most of us, sensitive to the problems our neighbors can create
for us, and those we can create for them. The point here is that things
are likely to get worse for us, and although this one went the right way,
it went that way very grudgingly. In literature it is called forewarning.

Walt was held harmless in court, I also hold him harmless. There are
others who I do not hold harmless, and you can hear 'em on the bands every
single night.

Thanks for filling in "the rest of the story" Gerry. K2WK sounds like a
great operator - maybe one day I'll be able to match some of his
accomplishments in ham radio.

Situated on a hilltop overlooking NNJ. I believe he has approx. 3 acres.

> It would
> certainly be unreasonable to run 1500 watts in an apartment or small
> lot.

He runs alot less than 1500 watts. The Korins made an issue that his amp could produce 1500 watts, not that he ran that amount. It's like a car. Just because it can go 100 mph, does not mean that you do.

> But I've seen RFI in larger lots, due strictly to inadequate

Yes, you could do that.

> However, it appears to send CW at a reasonable rate or to use a
> keyer, I need some sort of a paddle or bug or Iambic paddle or
> something.

There are basically three types of common "keys" for sending Morse. One is the straight key you mention above.

A second method is via a semi-automatic manual key, more commonly called a speed-key or "bug". This key also plugs directly into your radio. In operation, you move a "lever" from center to either side to form characters. In one direction (to the left) you manually send dashes as you would on a straight key but with a sideways motion. When the key is pressed in the other direction, a weighted spring mechanism "vibrates" to form dots. You simply hold the key in that position long enough to get the right number of dots formed. Note that each dash must be formed by a discrete motion, but the dots happen "semi-automatically" from a single motion.

A third method is via an electronic keyer (some newer radios have these built in). This device accepts key input from what are usually called "paddles". Paddles look much like a speed key or "bug" but rather than a single lever, usually have two. Pressing one causes the electronic keyer to send a string of dashes until released, and pressing the other causes the electronic keyer to send a string of dots until released. The keyer takes care of timing, spacing, and all those issues, so the code is "technically" perfect and well formed. The output of the keyer is plugged into your radio key jack.

Which way you learn is totally up to your preference. The electronic keyer/paddle method is probably the easiest to learn Some purists would argue that the "perfect" code generated is too "sanitary" or machine-like and lacks "character", but I guess I recommend learning this way and as you use Morse you can always experiment with other methods.

so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
April 20th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

A discount sellers SEASON PASS is available for
$50 per space if purchased by April 20th.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

SB QST @ ARL $ARLB020
ARLB020 ARRL calls on FCC to privatize handling of malicious interference
complaints

ZCZC AG20
QST de W1AW
ARRL Bulletin 20 ARLB020
From ARRL Headquarters
Newington CT April 17, 1997
To all radio amateurs

SB QST ARL ARLB020
ARLB020 ARRL calls on FCC to privatize handling of malicious interference
complaints

Citing ''a substantial need to improve and increase the quantity and
quality'' and timeliness of enforcement in malicious interference
complaints, the ARRL has called on the FCC to ''create a streamlined,
privatized enforcement process'' to handle and adjudicate the most
serious Amateur Service rules violations. In a petition for
rulemaking filed March 28, the League asked that the FCC change its
rules to permit members of the volunteer Amateur Auxiliary to bring
evidence of malicious interference violations directly before the
FCC's Chief Administrative Law Judge. The Chief ALJ would be
authorized to determine if the complainants have a valid case, to
issue show-cause orders, and to designate complaints for hearing.

The League recommended that the FCC capitalize on the volunteer
resources available through the Amateur Auxiliary to relieve the
evidence-gathering burden in such cases. If the rules changes are
approved, the League said it would likely assist members of the
Amateur Auxiliary in preparing and submitting complaints and in
presenting cases at administrative hearings. ''The increased use of
volunteer resources would seem to be entirely appropriate in the
Amateur Service, which involves avocational use of radio only,'' the
ARRL concluded.

While noting that most hams obey the rules, the League said Amateur
Radio needs the Commission's help ''in a very few, persistent,
serious enforcement cases'' but has not been getting it in recent
years because of the FCC's staff and budgetary limitations.

''Indeed, notwithstanding the best efforts of the Commission over the
past several years, there has been no resolution of the four or five
most serious cases brought to the Commission's attention,'' the

League said in its petition. Even in some of the cases the FCC did act upon, the League said the Commission did not go far enough to make the problems go away permanently. The League cited a case in New Orleans where fines against several amateurs were reduced but remain unpaid and uncollected. ''There is a widespread, and growing, perception that administrative forfeitures are not collectable,'' the ARRL said, pointing to the complex, time-consuming method of collecting fines that is required by federal law.

The ARRL noted that while the FCC suspended one ham's license in that city in 1996, it failed to look into malicious interference charges against at least two other hams in that area. The League said examples like these send a message that the FCC won't enforce Amateur Service rules in malicious interference cases. ''Malicious interference problems, if left unchecked, tend to spread and increase in intensity,'' the League said. The ARRL suggested that a series of ''visible, successful enforcement actions'' would deter rules violations and promote self-regulation.

The ARRL also suggested that some FCC policies get in the way of timely, effective enforcement. Current Wireless Telecommunications Bureau policy requires the Commission to independently corroborate evidence gathered by Amateur Radio volunteers. ''The policy often acts as an absolute obstacle to any enforcement activity whatsoever,'' and it demoralizes volunteers who view their efforts as wasted.

While noting that malicious interference cases often attract a lot of attention within the amateur community, the League said ham radio can be ''justifiably proud'' of its history of voluntary rule compliance. ''The overall level of compliant behavior among amateurs has not deteriorated over the years,'' the League emphasized, citing fewer than 10 active malicious interference cases in the US at present.

>to electronic equipment in the house and interference does not mean we
>should tuck out tail between our legs and hide.

I'm afraid it is real. Just because we are legally entitled to run 1500 watts, doesn't mean we should run 1500 watts. To borrow an analogy from another post, just because our car will go 100 MPH, doesn't mean we should drive that fast.

>I operate 75 phone with a group that extends from Maine to Florida.
>You can no more join in such conversations with 2 watts than you can
>fly off the Washington monument.

Boy you aren't kidding! If you don't have at least a 20 over S9 signal, those guys will just talk about you like you aren't even there.

>The more rulings we get like the one under discussion the better for
>all of us. It establishes a right and point of law that needs to be
>recognized

Only one ruling is required to establish precident. Quantity does not enter into the figure of merit I'm afraid. My hope is like yours, that we continue to be held in a favorable light. Having a lot of cases like this showing up in court though will ultimately work against us.

Hello everyone,

Does anyone out there have any experience with converting a single tube 3-500 type HF amp to a single bander for 6 meters?

I'd appreciate any comments. Please send Email so as not to clog up the newslist. And include a copy of any response to my friend Paul who is trying to do this--paulhe@juno.com

Thanks in advance.

I bet static is the cause. That's the frequency old cordless phones
use. Remember how noisy they are(the phones). Or do they have an old
cordless phone in the house? Just a thought.

Jack <@sullivan.vf.mmc.com> wrote:

>Pop open the back of almost any modern TV
>and you'll see that there is NO shielding inside!

This is an unfortunate fact of life that most neighbors do not want
to hear.

I live next door to the neighbor from hell. When I first moved in seven
years ago, and operated a lot more than I do today, this guy was over
almost every day complaining that I was coming through his TV, his
phone, his radio, his VCR, and (get this) the screen on his bedroom
window. (of course, this guy also complains about my grass not being
cut too, so what do you expect? And, here's a good one: once my dog was
barking, so his wife walked over to my parents' house 1/2 mile away to
complain to my parents :-)

Anyway, I attempted to be reasonable with this guy. I tried to explain
how his equipment was acting as a radio receiver. I referred him to the
disclaimer in the front of the user's manual on every piece of equipment
he owned. I explained how we could install some RF chokes on the
different pieces of cabling to help reduce RFI, if indeed that was the
point it was getting in.

Basically, even when shielding was installed, nothing helped. 1) His
equipment is your typical consumer junk, and 2) his house is only 20'
or so from mine (I live on a typical 40x100' city lot. Even at 100
watts, I still overload the front end of his VCR and TV.

Since my antennas are all roughly the same height, mounted off the roof
of my house 10' or so, I explained that if I installed a tower it would
have a good chance of reducing the RFI since my radiator would be higher
and the effective field would be different. No good on that idea, he
didn't buy it (just thought it would make the problem bigger PLUS reduce
his property values.)

Eventually, it got so bad and he became so abusive that I literally told
him if he didn't stop coming over and harassing me I would call the police.
We haven't spoken four sentences to one another in 3 years. His problem
"cleared up", mainly because I don't have the same amount of time as I did
5 years ago to get on and operate.

If RFI was harassing me, I'd probably be pissed too. Sometimes, though,
there is nothing you can do, except move.

Hey Bud,
Before you shoot down someone else's equipment just to sell your
own,
keep in mind that besides being a really self-serving and inconsiderate
person, that you're misconstruing what was written in the original
message you shot down. What was written is that the 95LX is good for
portable packet (and I have proven this to myself over the last two
years with a Tiny-2 TNC and my HT), like what was shown on the cover of
the issue of QST in question. It doesn't say "the same unit featured in
the article". Look before you leap - the precipice may be greater than
you think.

If your unit is the one exact same identical 200LX featured in the article, why are you selling it? According to the article, you sound very happy to take it anywhere. I guess not, huh? why do you self-cenetered folks have to take your frustration out on others? I couldn't stop you from selling your 200LX if I wanted to. You forget that there are more than enough people interested in your palmtop to where I am not threatening your all-important sale. I was going to list my HP Omnibook 100 (hi-res LCD VGA display, built-in mouse, PCMCIA, infrared, HDD, etc., etc., with AC adapter and serial cable for $250, but I haven't had the time to do so yet. How does your fancy 200LX stack up against that, bud? This is a notebook, but in addition to running Windows, it sure can run packet "at least as good" as your "celebrity" 200LX.

Get a life. I'm selling my 95LX palmtop for portable packet. That's it. It WILL do packet with a TNC, no matter what drivel you wish to share. I'm just sorry that you probably assumed I was trying to head your sale off at the pass.

Okay, gang. Listen up.

Stop trying to monkey around with the jumpers in the Yaesu 530s or any other rigs from Japan for the past 7-8 years. It will do no good.

Here is why.

First, you need to understand that Japan is a controlled society. What the Japanese government and industry want (and the two are inseparable) is what happens.

Now, for the story. In Japan, 2 meters is 144 - 146 and 70 cm is 430 - 440 mhz. But, lots of Japanese wannabes were buying vhf and uhf handhelds, changing the jumpers, and opening them up to bands above the ham bands. In Japan, those freqs belong to public service, the military, and some business bands. So, the Japanese FCC did what the Japanese government always does: They called in the industry boys and laid down the law. And the law is this:

There is a different CPU in Japanese VHF and UHF radios for the radios meant for domestic use, for European use, and for US use. When an

American ham arrives in Japan, the first thing he learns is to look for the dreaded "J" mark on radios. If, on the data plate, there is a triangle with a J inside, that means it has a Japanese CPU in it and you cannot modify it for operation even one hertz outside the Japanese band. No, you cannot and I don't care what your Uncle Henry from Sheboygan tells you. The only way a J-marked radio can be opened up is to change the CPU.

So, what does this have to do with monkeying around with the jumpers? Used to be, back in the days before the J mark, the Japanese put the same CPU in all radios and set the freq range with jumpers. This meant that you could change a couple of jumpers and make your ham handheld cover unbroken from 107 mhz to 1.3 gig, or some such foolishness.

No more. Now, you can mess around with the jumpers and make the DISPLAY show weird freqs but it ain't gonna transmit outside the ham bands.

Only exception is Japanese HF rigs which use the same CPU for amateur, military, and commercial. That is why, after some minor surgery, my ICOM 729, which I purchased in Akihabara in 1992, transmits from 2.1 mhz through 30 mhz, non-stop. But the handhelds that I purchased in Japan at rock-bottom prices had to be sent to ICOM USA for CPU replacement so they cover the US bands.

Of course, I expect that I will be flamed by some know-it-all who doesn't know sushi from sashimi. Oh, well, believe what you want.

Date: 1997-04-17 00:00:00 UTC
From: rclark2004@aol.com
Message-ID: <19970417030900.XAA29687@ladder01.news.aol.com>
Source record: 200271

Have been a tech for about three years and added the plus about two years ago. Have a Kenwood TS-450 S but have only listened a bit. With retirement 14 days away, would like to start to get on HF with CW. Have looked at the catalogs, the manual that came with the radio and consulted ARRL's Handbook and Operating Manual, but still do not understand the equipment options for sending CW. Any guidance you can give me on the following would be appreciated.

It looks like I could just use a straight key plugged into the radio and send CW (if that isn't correct, let me know). However, it appears to send CW at a reasonable rate or to use a keyer, I need some sort of a paddle or bug or Iambic paddle or something. Since I haven't started to learn to send CW, it would seem it would be best to just start with one of these rather than a straight key. Is that correct? What are each of these, what are the advantages/disadvantages, and do you have a recommendation for someone just starting? What is a keyer, what does it do, do I need one, what features should I be looking for in one, do you have any recommendations in this regard? Can you send CW from a computer by typing on the keyboard? If so, how is that done? Would it be possible with the TS-450? I'm afraid I don't know enough to even ask the questions I should. What else should I have asked and what other recommendations would you make.

Any assistance will be greatly appreciated. If it would be ok to ask you a follow-up question or two, it would be appreciated if you would indicate that in your reply. For me, a reply direct to me at RClark2004@AOL.com would be best since it took me three nights to find this area (Yea, I'm new to internet too, but have managed to learn how to get my e-mail).

Thanks

Ralph H. Clark, KB5UGX

>stick, and no sun spots for chrise sake - and work plenty of DX too.

I can cite at least a dozen DX QSOs (and a handful stateside) I could have made if I owned an amplifier, and didn't make because I don't. (yet) And that doesn't count the ones I didn't make because I couldn't break pileups -- just the ones I didn't make because the propagation just wasn't there, or because noise was masking my signals. In fact, there are at least three countries (BY1PK, 9M2HO, 9M6TCR) that would be in my log if I had QRO; all three copied the W9.. (and there was noone else calling) but just couldn't pull out the rest.

I enjoy DX and contesting. I don't enjoy RST/QTH/NAME QSOs with people 300 miles away. I don't enjoy trying to run a ragchew with someone with a 339 signal. I've tried VHF FM and packet (and can see where some might like it) but haven't got into it either. Being restricted to QRP would erase my interest in amateur radio.

Access to QRO is also important for some VHF operations. It's usually required for EME, and usually valuable for meteor-scatter. (also for ATV because of the very wide bandwidth)

I don't know Mr. Kornienkos' lot size or antenna situation. It would certainly be unreasonable to run 1500 watts in an apartment or small lot. But I've seen RFI in larger lots, due strictly to inadequate consumer gear. (some of this stuff suffers serious interference from a HT!) Luckily, in the cases I've seen cooperative neighbors allowed me to apply countermeasures, and everyone was happy. Unfortunately, in one case it took the inability of one neighbor to get an antenna ordinance through the city council to get his cooperation..

In brief:
-- QRP is not a solution for everyone. It's a good subhobby for those who enjoy it, but it's not a universal fix for everyone suffering from RFI.

-- Cooperation is cricital, on BOTH sides. The amateur must be willing to help apply appropriate anti-RFI measures -- and the person suffering RFI must be willing to allow those measures to be applied.

To whom is above tirade directed? You previously acknowledged that I had done my code so it can't be me. More mouth muscle memory? Lots of us have done it. Unfortunatly it didn't make us unthinking codebots so despite the fact that we have upgraded and can play on HF to our hearts content we still don't see a point to continuing a stand alone CW test.

If, as I suspect, CW is the only acomplishment you can look to in your life, then I can understand your heated defense of the skill. Reflex actions in response to aural stimuli are savant skills at best, not really indicative of commitment or work or any other admirable trait.

I am not selling mine... In fact I am working on running JNOS on it.
I have been happy with my 200 for 4 years and use it often. My
DAD though has decided he hates DOS. Therefore he purchased
a PB pentium. I cleared this up in my initial post. You setup is
SIMILAR to mine but dont imply its the same thing. It is infact a
scaled down version(no offense for my station is a scaled down
version of a packet BBS itself). I make no profit if my dad sells
his HP therefore I am NOT self-serving anything.

As for your omnibook, all those features eat up batterries. How long
would
it run packet on batterries. The omnibook vs Palmtop is a battle of
apples
and oranges. each has a specific strength. The Omnibook would lose
out to the palmtop in my needs but may win out in yours. They can not
be put against each other in a fair way.

As for the 95lx. My packet station pushes the 200lx to its limits...
LITERALLY. JNOS is going to be a tough solve. The 95 simply is not
capable of meeting my setup. No offense it just does not have the
capabilities. Even the 100 would be pushing it. I have gotten alot of
email
on 200lx users and seekers trying to duplicate my results. And with the
95
I simply can not guarrantee the same. ANd I dont have the time to explain

that to 100 people. This is why I know of people trying to sell their 95
for a
200. This demand is causing 200s to be pricy. Also HP-s stupid decision
to
end DOS palmtop production isnt helping seekers any.

and again, my dad dropped his email account and therefore can not sell his
palmtop on the internet where I can. Perhaps I will forward anymore
95users
seeking portable packet operations to you. Just as I forward portable
pacsat users to another. I knew Ild be flamed and frankly it still saves
me
a lot of wasted email from people I can not help.

If I offended you i am sorry but when you have someone comparing their
similar
station to yours and then you get email from people with less similar
stations.
I get email from psion users and I had to create a general FAQ for non-hp

users who think every palmtop is the same.

I suggest you write about your station. Perhaps you know enough about JNOS

and can tell me where I can find the whole source code of KA9Q NOS. I
also
dont need mail from people running TNCs I know nothing about. I wrote
what I am
doing and am happy to help others do the same. Beyod that...

73 and hope to hear your success story. Would you like me to add it to my
web page? Ild be more than happy to. I already added N1RWYs palmtop
packet page.

A comment regarding omnibooks - you might be tempted to connect the
omnibook power jack to an external DC power source in this situation...

Based on material I've read in the past, this is quite hazardous if you
also plan to connect something to one of the I/O ports (as in using the
serial port for a packet radio connection) - it seems there are unexpected
DC paths involving the power jack and the I/O ports that can result in
damage to the omnibook.

Hi Doug,

I agree that the interference issue will only grow.
It's time hams lobby for formulation/publication
of standards of "good engineering design" standards
to be used by consumers buying equipment and for
the FCC to use in it's regulations.

At the very least, some standards of shielding and filterings
leads coming out of the shielded enclosure.
Hams need these standards, so that in EMI cases, the hams
can say they follow them, and ask for the other parties for
assurances of that their equipment also follows the standards.

The fact that so much computer cables and networks came out with
unshielded cables is very unfortunate. It is time the
telephone lines were twisted pair within shielded cable.
All coax sold for TVs, VCRs etc should be at least 100% shielded.
Seems to me, those are the beginnings of good design.

And it is time that those claiming interference be required
to document the interference and the good engineering design
of the equipment being interferred with.

>make a Real HF written Test, and let all these peoplewho want to use
>Modern Digital Techs, operate only Modern Digital Modes, and prohibit
>there use of Ancient Modes such as CW or of Course Phone.

Get rid of the archaic 300 baud speed limit and the 1 kHz occupied
bandwidth limit for digital methods on HF and I bet you'd get lots
of takers.

We can do robust digital voice in 2400 bps (better performance than
SSB in noise and interference, but only occupying 1.2 kHz of spectrum).
Let us use SS at whatever speed we can fit into the band, and we can do
not only robust, but also very high fidelity, voice, really decent rate
data transmissions, and even MPEG-II video movies (and suffer less
mutual interference doing it than with present methods).

Of course, RF is RF, regardless of information encoding method used,
so we need a "Real HF written Test" for *every* HF operator anyway.
There's no reason that demonstrating Pavlovian conditioning in regard
to tone sequences should exempt you from that. If you want to take an
additional Morse speed exam in order to run archaic old OOK Morse, I
guess you can, though it seems to me that the only Morse test that
matters is the one you pass or fail every time you attempt to make
an OOK Morse contact.

In the post-WWII history of amateur radio, I haven't heard of even one
NAL being issued for slow or sloppy Morse (though NALs have been issued
for chirp and hum, but Morse conditioning doesn't address that, radio
knowledge does). So I doubt Morse conditioning is a matter of real concern
to the government (especially today when it no longer has any training value
to the nation).

It's really a very self-limiting issue. If you can do Morse well, you will.
If you can't, you'll either improve or quit trying to use Morse. Either way,
you don't present a problem to the government, or other spectrum users, so
formal speed tests are redundant and serve no useful purpose.

The only purpose Morse speed testing serves today is the welfare state
purpose of artificial life support for a text encoding method which its
supporters apparently believe can't stand on its own merits. Such subsidies
are always counterproductive. They impede progress by distorting natural
darwinian competition. That distortion, and the attitudes from which it
derives, has already reduced amateur radio (as the lone Morse holdout in
the modern world) to the status of communications backwater.

Our licensing system incentivizes Morse speed to the extent that it is the highest aspiration toward which an amateur can reach. That's clearly absurd, and directly counter to the charter purposes of the amateur radio service.

>Im told he is a "big gun" multi-multi contester.

Yes, we were all told the same thing.

>No you can all go and argue over a matter that does not concern you but
>do it with the correct information.

If it didn't "concern" us, we wouldn't be discussing it Bill. If you
were not concerned, I assume you wouldn't be discussing it either.

The discussion veered toward one ham in particular because I unfortunately
directed one of my comments to him. Quoting my own post: "why doesn't he
turn his damn amp off once in a while." This was a mistake, and I have
apologized to Mr. Kornienko.

Whether or not Mr. Kornienko uses prudent amounts of power is actually
peripheral to the issue. The fact that too many hams use excessive power,
and that such practices harm the image of ham radio is precisely the
issue. The point is brought to a focus by the comments made by the judge
in his ruling.

I don't want to be legislated off the air because of some knucklehead who
doesn't have enough sense to know when to turn off the amp or change bands.
We seem to be getting precariously close. If the judge had decided to rule
the other way, we'd be looking at a whole new ball game.

The FCC has now said that if our stations run more than 50 watts, they
need to be evaluated. The next step could be permits, or complete
prohibitions in urban areas. I don't like this any better than anyone else
here.

10 meters is going to be kicking some serious butt for DX over the next
few years, but it has an even greater potential for RFI and TVI than 11
meters. We run the risk of seriously pissing off a lot of folks between
now and 2000. What price do we really want to pay for finally getting
that last island prefix?

Is our privilege to operate really more important in the grand scheme than
our neighbor's right to use his telephone or watch the World Series on TV?
About equal I'd say. Only difference is, he can watch his TV without
affecting our enjoyment of our favorite passtime. There is an inherent

inequity in this balance, of which we must be cognizent.

It is certainly much easier for us just to say - interference? hey, that's the other guy's problem. Well, the other guy is now beginning to search for ways in which to solve his problem. Let's think real hard for a minute.....what would be the easiest way for him to do that?

> 73's Eric KB9QAI viking@add-inc.com

Eric --- there are two things that you can do that may prevent some
RFI. Be sure all your equipment is grounded to one point. That point
could - for example - be a piece of buss bar or copper water pipe at
the rear of your desk. Then run as short a ground a as possible from
there to a good ground rod.

A low pass filter in your transmission line for freq. up to 30 might
make a difference - but not likely. Xmtrs do not put out harmonics
like they use to.

Go ahead and get on the air and it is very likely that you will cause
no trouble at all with your neighbors 50 yards away.

Come back and tell us how it all worked out.

From ARRL Headquarters
Newington CT April 18, 1997
To all radio amateurs

SB QST ARL ARLB021
ARLB021 Ham radio excluded from CB enforcement bill

At the request of the ARRL, Amateur Radio has been specifically exempted from a bill submitted April 17 by US Sen Russell Feingold (D-Wisconsin) that would give states and municipalities authority to enforce the FCC's CB regulations. Feingold's bill, designated as Senate Bill 608, originated with efforts by the Beloit, Wisconsin, City Council--responding to long-standing CB interference complaints--to pass an ordinance allowing local authorities to enforce FCC regulations. The bill is aimed at reducing radio frequency interference stemming from the use of unauthorized equipment or frequencies by CBers.

In presenting his bill, Feingold told his Senate colleagues that he has received RFI complaints over the past several years from numerous Wisconsin communities ''in which whole neighborhoods are experiencing persistent radio frequency interference.''

If approved by Congress, Feingold's bill would amend the Communications Act to allow state or local governments to enforce regulations that prohibit the use of CB equipment not authorized by the FCC (such as high-power linear amplifiers). As it now stands, no license is required to operate on the 11-meter Citizens Band, but the FCC does have strict requirements on the type of equipment that CBers can legally use. Feingold's bill would preserve the federal preemption of all other telecommunications matters. It would exclude FCC-licensed services, including Amateur Radio, from state or local oversight.

Also at the ARRL's request, the bill calls upon the FCC to provide ''technical guidance'' to states and municipalities in detecting and determining violations. Those affected by a state or local enforcement decision would be able to appeal to the FCC. ARRL asked Feingold to add this provision as final safeguard for amateurs who

might be erroneously prosecuted despite the bill's other exemptions for amateurs. Feingold's bill also would not preclude the FCC from enforcing its own regulations as they apply to CB.

Feingold called his bill ''a common-sense solution to a very frustrating and real problem which cannot be addressed under existing law.''

QST de W1AW
Special Bulletin 8 ARLX008
From ARRL Headquarters
Newington CT April 18, 1997
To all radio amateurs

SB SPCL ARL ARLX008
ARLX008 Edward P. Tilton, W1HDQ, SK

ARRL Headquarters was saddened to learn that VHF pioneer and former QST VHF Editor Ed Tilton, W1HDQ, of Spring Hill, Florida, died March 1. He was 89. In December 1939, Tilton inaugurated the first QST column devoted to VHF. Originally called ''On the Ultra Highs,'' it eventually became ''The World Above 50 Mhz.'' Tilton edited the VHF column until he retired from the ARRL staff in 1960, reporting on-the-air activity and encouraging experimentation initially on the then 56 and 112-MHz amateur allocations and, later, on all VHF and UHF bands. The UHF DX Records box--the precursor of today's standings boxes--debuted in 1940.

During World War II, Tilton worked as a field engineer for the military on radar projects--mostly at Pearl Harbor and Guam, and became acquainted with the great technological progress the military was making in the VHF-UHF spectrum. Even while occupied with his military duties, he still managed to file occasional columns throughout the war years.

In 1947, Tilton established the first WAS standings box for 6 meters. In 1955, he proposed establishing the first calling frequencies for the 6 and 2-meter bands. Following his retirement, Tilton remained a QST Contributing Editor. He was the author of the ARRL's first VHF Manual and wrote numerous articles for QST.

Tilton's column inspired an entire generation of VHF and UHF enthusiasts and encouraged such activities as EME, meteor scatter and auroral propagation. He was considered an authority on sunspots and solar flares and their effects on propagation. As ARRL Executive Vice President David Sumner, K1ZZ, put it: ''Ed Tilton was one of the outstanding amateur scientists of his generation. Perhaps more than any other individual, he led the exploration of the extended-range properties of the VHF and UHF bands.''

Tilton was a life member of the ARRL. He also belonged to the QCWA and the Spring Hill Amateur Radio Club. He was a native of Springfield, Massachusetts. His wife, Leitha, died in 1995. His sister, Ruby, is among the survivors. He is to be interred in Canton, Connecticut. Donations in Ed Tilton's name may be made to the Hospice of the Florida Suncoast, 300 E Bay Dr, Largo, FL 34640.

Seattle, WA April 18, 1997
To all radio amateurs

SB PROP ARL ARLP016
ARLP016 Propagation de KT7H

Average solar flux was down a little with sunspot numbers up a bit over the past week. The most significant event was the delayed reaction to the big solar mass ejection, which drove the Planetary A index to 38 and K index up to 7 on April 11.

Over the next few days watch for a retreat in the solar flux from the high seventies down to the low seventies until the end of the first week in May, when it will start creeping up to the eighties again. Solar flux is expected to be above 80 by May 10. Look for geomagnetic disturbances to appear again around April 24 and 25. All of this forecast is based upon activity seen during the last solar rotation, and of course new activity could appear at any time.

Sunspot Numbers for April 10 through 16 were 47, 31, 30, 34, 45, 39 and 33 with a mean of 37. 10.7 cm flux was 77.6, 77.1, 76.4, 78.8, 77.4, 78.7 and 75, with a mean of 77.3, and estimated planetary A indices were 10, 38, 9, 8, 4, 4, and 12, with a mean of 12.1.

e-pubs, software support; Hams to operate from Biosphere 2

ARRL CALLS ON FCC TO PRIVATIZE HANDLING OF MALICIOUS INTERFERENCE COMPLAINTS

Citing "a substantial need to improve and increase the quantity and quality" and timeliness of enforcement in malicious interference complaints, the ARRL has called on the FCC to "create a streamlined, privatized enforcement process" to handle and adjudicate the most serious Amateur Service rules violations. In a petition for rulemaking filed March 28, the League asked that the FCC change its rules to permit members of the volunteer Amateur Auxiliary to bring evidence of malicious interference violations directly before the Chief Administrative Law Judge. The Chief ALJ would be authorized to determine if the complainants have a valid case, to issue show-cause orders, and to designate complaints for hearing.

The League recommended that the FCC capitalize on the volunteer resources available through the Amateur Auxiliary to relieve the evidence-gathering burden in such cases. If the rules changes are approved, the League said it would likely assist members of the Amateur Auxiliary in preparing and submitting complaints and in presenting cases at administrative hearings. "The increased use of volunteer resources would seem to be entirely

appropriate in the Amateur Service, which involves avocational use of radio only," the ARRL concluded.

While noting that most hams obey the rules, the League said Amateur Radio needs the Commission's help "in a very few, persistent, serious enforcement cases" but has not been getting it in recent years because of the FCC's staff and budgetary limitations.

"Indeed, notwithstanding the best efforts of the Commission over the past several years, there has been no resolution of the four or five most serious cases brought to the Commission's attention," the League said in its petition. Even in some of the cases the FCC did act upon, the League said the Commission did not go far enough to make the problems go away permanently. The League cited a case in New Orleans where fines against several amateurs were reduced but remain unpaid and uncollected. "There is a widespread, and growing, perception that administrative forfeitures are not collectable," the ARRL said, pointing to the complex, time-consuming method of collecting fines that is required by federal law. The ARRL noted that while the FCC suspended one ham's license in that city in 1996, it failed to look into malicious interference charges against at least two other hams in that area. The League said examples like these send a message that the FCC won't enforce Amateur Service rules in malicious interference cases. Informal mediation attempts also have failed. "Malicious interference problems, if left unchecked, tend to spread and increase in intensity," the League said. The ARRL suggested that a series of "visible, successful enforcement actions" would deter rules violations and promote self-regulation.

The ARRL also suggested that some FCC policies get in the way of timely, effective enforcement. Current Wireless Telecommunications Bureau policy requires the Commission to independently corroborate evidence gathered by Amateur Radio volunteers. "The policy often acts as an absolute obstacle to any enforcement activity whatsoever," and it demoralizes volunteers, who view their efforts as wasted.

While noting that malicious interference cases often attract a lot of attention within the amateur community, the League said ham radio can be "justifiably proud" of its history of voluntary rule compliance. "The overall level of compliant behavior among amateurs has not deteriorated over the years," the League emphasized, citing fewer than 10 active malicious interference cases in the US at present.

MIREX ROUND 2 SCHOOL CONTACT A SUCCESS

With spare parts now on hand to repair an ailing carbon dioxide scrubber aboard the Russian Mir space station, ham-astronaut Jerry Linenger, KC5HBR, took a few minutes to share some pleasant thoughts Monday, April 14, with some elementary school pupils in Michigan. The youngsters, at Alaiedon Elementary School in Mason, Michigan--near the state capital of Lansing--posed 18 questions to Linenger during the on-the-air visit, which was occasionally interrupted by QRN. The Michigan contact used AMSAT's "telebridge" network, and was made via AMSAT member Graham Ratcliff, VK5AGR,

in Adelaide, Australia. The telebridge patches a remote amateur satellite ground station through a telephone loop provided by MCI/Darome Telecommunications in Chicago to an Amateur Radio station set up at the school. Alaiedon Elementary science teacher John Barry headed up the successful effort in Michigan. Leading the school technical committee was Jeff Broughton, WB8RJY, assisted by Brent Williams, WB8TRL, and John Imeson, N8JFB.

During the QSO, Linenger spoke of his very young son, John, and how he likes "talking" with him on a regular basis via tape-recorded letters (some of which have been aired on National Public Radio). Some 50 people assembled in the Alaiedon Elementary media center, about half of them pupils. Another 350 or so more participated in the MIREX QSO via a public-address link to the school's gymnasium, and a remote audience heard the contact on the WB8RJY repeater on 443.700 MHz FM. US Rep Debbie Stabenow (D-MI), a member of the House Science and Technology Committee, was in the Alaiedon school audience during the contact.

The school enjoyed a lot of live media attention, as two TV stations and a daily newspaper showed up to cover the event. The telebridge hookup worked well, and Linenger commented more than once on how well he could hear the school.

Last week, a Progress rocket carrying spare parts for Mir's CO2 scrubber plus other supplies successfully docked with Mir. The scrubber shut itself off earlier this month when a coolant leak caused it to overheat. Both NASA and Moscow say there is no danger to the crew.

Meanwhile, comments this week by NASA Space Shuttle Program Manager Tommy Holloway gave rise to optimism that the space agency will refly the curtailed STS-83 mission this year. The mission, which would be designated STS-83R, would carry the microgravity science laboratory (MSL) and could again include SAREX. In Holloway's words: "The shuttle manifest for the remainder of the year, while tight, appears able to accommodate a reflight of Columbia and its MSL payload in early July with reasonable impact to shuttle launch dates for the rest of calendar year 1997." NASA managers were to make a final decision on flying STS-83R April 18.--Pat Kilroy, WD8LAQ/NASA

HAMS RELAX A BIT AS MINNESOTA FLOOD WATERS RECEDE

With the exception of Northwestern Minnesota and North Dakota which are now seeing the effects of melting snow, the major threat of rising water in and around Minnesota has passed, reports Minnesota Section Manager Randy "Max" Wendel, N0FKU. "We're seeing light at the end of the tunnel with our flooding," he added. A blizzard April 5 left over a foot of snow in the Fargo/Moorhead and Grand Forks/East Grand Forks areas of the Red River Valley, and freezing temperatures encased already flooded communities. Renewed flooding in the Red River Valley was reported late this week. In Fargo, North Dakota, hams were reported to be working with relief workers to track the rising waters.

As flooding threatened, an ARES HF Flood net met on 75 meters, activated daily in late afternoon, for ARES ECs and other radio amateurs in affected areas to provide flooding updates and report any anticipated communications needs that might arise. While there was no significant loss of commercial communication service, telephone service and power were out in some communities. In the Twin Cities (Minneapolis-St Paul), the MARS system was activated at the request of the Salvation Army office. MARS assisted in relaying messages from the flooded communities of Montevideo and Granite Falls, where the Salvation Army was transporting supplies from its warehouse in the Twin Cities. State Army MARS Director Claudine Will, N0HQB, reported that members of the Robbinsdale ARC in the Twin Cities traveled to Montevideo/Granite Falls to assist in the field. They set up communication back to the Salvation Army warehouse which was staffed by Matt Stepaniak, N0TNL, who dedicated several long days as a net control station to assist MARS and Salvation Army relief efforts. ARES members from Willmar (Kandiyohi County) also provided communications in Montevideo/Granite Falls. In Moorhead (Clay County), ARES EC Ken Covey, W0ZQJ, reported that several hams offered help with relief efforts. Radio amateurs also assisted the Salvation Army by communicating needs for sandbaggers, food, dike patrols, transportation, and other general volunteer duties. The same occurred in the Twin Cities and other areas of Minnesota.

Throughout the state, flood levels often equaled or exceeded any previous flood crests ever recorded. Half of Minnesota's counties were officially designated by President Clinton to qualify for federal disaster-relief funding. Vice President Al Gore visited the state last week and expressed his concern.

"I would like to express my personal thanks to all radio amateurs, MARS members and ARES members who provided communications throughout the floods in Minnesota," Wendel said. "Radio amateurs were able to provide a needed resource." He said hams can never be ready enough to respond to an emergency and urged all hams to register as ARES members.

SOUTH DAKOTA FLOODING BRINGS OUT BEST IN HAMS

Watertown, South Dakota, lived up to its name this past week. After record flooding struck the town, the call for help went out early on April 5. Twenty-five hams, most members of South Dakota's Lake Area Radio Klub members (LARK) provided support communication while more than a quarter of the town's 20,000 residents were evacuated. Before standing down April 13, LARK members manned radios, coordinated food deliveries, hauled and filled sandbags, and passed information among the various governmental and private agencies that were involved.

The effort drew thanks from a variety of officials, including Watertown Mayor Brenda Barger (who oversaw the flood-relief effort), Gov William Janklow and US Senate Minority Leader Tom Daschle (D-SD). Daschle accompanied Vice President Al Gore when the vice president visited Watertown April 11 to view the destruction. Daschle later toured the Codington County Emergency Management Center, the hub of the flood relief effort.

Bob Hoaas, K0ZBJ, spent the longest time on duty after being displaced from his Lake Kampeska home by floodwaters early April 6. Still out of his home early this week, K0ZBJ manned the radio gear at the Codington County Extension Center, which served as the main evacuation center. Denny Warrick, KF0HL, spent more than 30 hours April 5, 6 and 7 at the emergency operations center, passing information and answering questions. Kurt Engel, NT0Q, pulled the night duty there April 5 and was busy on two radio systems when it became necessary to evacuate more residents in the wee hours of April 6. He was joined by his daughter, Rachel Engel, KB0NOG, for a few hours late April 6. LARK President Laurel Foss, KB8HMR, logged the second most number of public service hours during the flooding, much of that at the extension center shelter.

At another evacuation shelter in Watertown Senior High School, Wendell Lunde, KB0NOE, was the primary operator the three days the facility was open. Henry German, KB0NOF, handled some overnight duty. Officials closed the shelter April 8.

With a radio in hand to receive instructions on April 5, Boyd Joens, KF0YX, found himself in the sandbag business. He hauled 29,000 sandbags from the South Dakota Department of Transportation office to Codington County for use by individuals. Joens transported another 30,000 sandbags, and volunteers (with help from some 200 prison inmates) worked during a blinding blizzard and sub-zero wind chill to fill and place the bags in a last-ditch effort to save hundreds of homes from flooding. The effort proved successful. Later in the week, when flood waters threatened nearby Lake Pelican, KF0YX transported still more sandbags for residents to use.

Flood waters limited the participation of at least two LARK members. Merle Kolden, N0GKZ, and Burdette Wibeto, N0GHM, had helped man the station at the extension center evacuation site on April 5. They managed to get to their homes at Wallace late that day, but the high water closed all routes between Wallace and Watertown by the next morning, preventing them from returning to provide additional assistance.--Denny Warrick, KF0HL

HAM RADIO EXCLUDED FROM CB ENFORCEMENT BILL

At the request of the ARRL, Amateur Radio has been specifically exempted from a bill submitted April 17 by US Sen Russell Feingold (D-Wisconsin) that would give states and municipalities authority to enforce the FCC's CB regulations. Feingold's bill, designated Senate Bill 608, originated with efforts by the Beloit, Wisconsin, City Council--responding to long-standing CB interference complaints--to pass an ordinance allowing local authorities to enforce FCC regulations. The bill is aimed at reducing radio frequency interference stemming from the use of unauthorized equipment or frequencies by CBers.

In presenting his bill, Feingold told his Senate colleagues that he has received RFI complaints over the past several years from numerous Wisconsin communities "in which whole neighborhoods are experiencing persistent radio frequency interference."

If approved by Congress, Feingold's bill would amend the Communications Act to allow state or local governments to enforce regulations that prohibit the use of CB equipment not authorized by the FCC (such as high-power linear amplifiers). As it now stands, no license is required to operate on the 11-meter Citizens Band, but the FCC does have strict requirements on the type of equipment that CBers can legally use. Feingold's bill would preserve the federal preemption of all other telecommunications matters. It excludes FCC-licensed services, including Amateur Radio, from state or local oversight.

Also at the ARRL's request, the bill calls upon the FCC to provide "technical guidance" to states and municipalities in detecting and determining violations. Those affected by a state or local enforcement decision would be able to appeal to the FCC. ARRL asked Feingold to add this provision as final safeguard for amateurs who might be erroneously prosecuted despite the bill's other exemptions for amateurs. Feingold's bill also would not preclude the FCC from enforcing its own regulations as they apply to CB.

Feingold called his bill "a common-sense solution to a very frustrating and real problem which cannot be addressed under existing law."

NJ JUDGE RULES HAM INTERFERENCE OUT OF HIS HANDS

A New Jersey Superior Court judge has ruled that federal law prevents him from declaring ham radio interference a nuisance. Judge Reginald Stanton made that determination in a case reported April 16 in the New Jersey Star Ledger, in which a couple sued their neighbor, Walter Kornienko, K2WK, of Lafayette, New Jersey, claiming his transmissions interfered with their telephone, TV, and garage door opener. The couple, Leopold and Karen Korins, was trying to get Stanton to declare the situation an nuisance and to direct Kornienko to cut back on his hobby. But Kornienko's lawyer claimed his client had a right to operate under a federal license and suggested the Korins do more to shield their appliances from RFI. According to the news report, Kornienko, who's been licensed since 1967, runs the maximum 1500 W PEP.

"There is no question that there has been meaningful intrusion into the Korins' home and their expectations of enjoying a reliable and reasonably high quality level of telephone and television reception," Stanton is quoted as saying in the Star Ledger report by Bill Riley.

Stanton conceded, however, that the FCC had jurisdiction and he had no authority to limit Kornienko's hamming. "If he is obeying the FCC rules and the Korins can't fix the situation in their home, that's tough and they'll have to lump it," Stanton reportedly said.

Kornienko is said to have expressed relief at the ruling. Hudson Division Director Frank Fallon, N2FF, said he'd discussed the problem with Kornienko, an avid contester. He described the area as rural, rather than suburban, and expressed the hope that Kornienko could somehow recover his legal expenses.

RADIO SHACK TAKES HTX-204 DUAL-BAND HT OFF THE MARKET

Radio Shack notified its stores April 17 that it's immediately recalling unsold stocks of its new HTX-204 dual-band handheld transceiver because of what a source at Radio Shack headquarters called "a regulatory compliance issue" involving the transceiver. Radio Shack said it plans to take the HTX-204 off the market and has no immediate plans to offer another dual-band HT. The HTX-204 started showing up in the chain's 7000 retail stores about six weeks ago.

A Radio Shack official at the company's Ft Worth, Texas, headquarters said the company was concerned about the "potential for illegal use" of the HTX-204. He declined to be specific, but he did emphasize that the HTX-204 is perfectly legal for use on Amateur Radio frequencies.

Radio Shack expressed disappointment with the turn of events surrounding the HTX-204 and directed any questions to local Radio Shack retail stores.

INTERNATIONAL MARCONI DAY

Special event operations are planned for this weekend to commemorate International Marconi Day, Saturday, April 19. One of the more unusual is W6KB/IMD, which will transmit from Bolinas, California, from the site of commercial radio station KPH, and--using a remote-control wire link with commercial site WCC on Cape Cod, Massachusetts--will listen from both coasts! Operation will commence April 19 at 0000 UTC and conclude 24 hours later. Frequencies will be 7.037 and 10.121 MHz. For more information, contact Adam McLaughlin, KD6POC, e-mail kd6poc@jps.net or kd6poc@qsl.net; Web http://www.jps.net/jmclaugh.

Radio Austria International will operate special event station OE1M on International Marconi Day, April 19, 0000-2400, all bands, SSB and CW. A special QSL is available for QSOs and SWL reports. Operating modes and frequencies of OE1M will be announced by Radio Austria International each hour following the news. QSL with sase and one IRC to Radio Austria International, A-1136 Wien, Austria. For more information, see http://www.ping.at/rai/ on the Web.

A list of other IMD stations can be found at http://www.etruria.net/associazioni/ari/imd.htm on the World Wide Web.

SOLAR FLUX DOWN, NUMBERS UP

Sun watcher Tad Cook, KT7H, Seattle, Washington, reports: Average solar flux was down a little with sunspot numbers up a bit over the past week. The most significant event was the delayed reaction to the big solar mass ejection, which drove the Planetary A index to 38 and K index up to 7 on April 11. Over the next few days watch for a retreat in the solar flux from the high 70s down to the low 70s until the end of the first week in May, when it will start creeping up to the 80s again. Solar flux is expected to be above 80 by May 10.

Look for geomagnetic disturbances to appear again around April 24 and 25. All of this forecast is based upon activity seen during the last solar rotation, and, of course, new activity could appear at any time.

Sunspot numbers for April 10 through 16 were 47, 31, 30, 34, 45, 39 and 33, respectively, with a mean of 37. The 10.7-cm flux was 77.6, 77.1, 76.4, 78.8, 77.4, 78.7 and 75, respectively, with a mean of 77.3, and estimated planetary A indices were 10, 38, 9, 8, 4, 4, and 12, respectively, with a mean of 12.1.

EDWARD P. TILTON, W1HDQ, SK

ARRL Headquarters was saddened to learn that VHF pioneer and former QST VHF Editor Ed Tilton, W1HDQ, of Spring Hill, Florida, died March 1. He was 89. In December 1939, Tilton inaugurated the first QST column devoted to VHF. Originally called "On the Ultra Highs," it eventually became "The World Above 50 MHz." Tilton edited the VHF column until he retired from the ARRL staff in 1960, reporting on-the-air activity and encouraging experimentation initially on the then 56 and 112-MHz amateur allocations, and later on all VHF and UHF bands. The UHF DX Records box--the precursor of today's standings boxes--debuted in 1940. During World War II, Tilton worked as a field engineer for the military on radar projects--mostly at Pearl Harbor and Guam, and became acquainted with the great technological progress the military was making in the VHF-UHF spectrum. Even while occupied with his wartime duties, he still managed to file occasional columns throughout the war years.

In 1947, Tilton established the first WAS standings box for 6 meters. In 1955, he proposed establishing the first calling frequencies for the 6 and 2-meter bands.

Following his retirement, Tilton remained a QST Contributing Editor. He was the author of the ARRL's first VHF Manual and wrote numerous articles for QST.

Tilton's column inspired an entire generation of VHF and UHF enthusiasts and encouraged such activities as EME, meteor scatter and auroral propagation. He was considered an authority on sunspots and solar flares and their effects on propagation. As ARRL Executive Vice President David Sumner, K1ZZ, put it: "Ed Tilton was one of the outstanding amateur scientists of his generation. Perhaps more than any other individual, he led the exploration of the extended-range properties of the VHF and UHF bands."

Tilton was a life member of the ARRL. He also belonged to the QCWA and the Spring Hill Amateur Radio Club. He was a native of Springfield, Massachusetts. His wife, Leitha, died in 1995. His sister, Ruby, is among the survivors. He is to be interred in Canton, Connecticut. Donations in Ed Tilton's name may be made to the Hospice of the Florida Suncoast, 300 E Bay Dr, Largo, FL 34640.

IN BRIEF:

* This weekend on the radio: EU Spring Sprint, Michigan QSO Party, and the YU DX Contest. On April 22, the ARRL VHF/UHF Spring Sprint for 222 MHz is also scheduled. See April QST, page 98 for details.

* Welcome to the ARRL staff: Walter E. Ireland, WB7CSL, accepted the position of Technical Specialist in the ARRL Washington Office, effective April 1. He directly assists Technical Relations Manager Paul Rinaldo, W4RI. Walt was first licensed as K1FUW in 1963. He has just taken early retirement from the federal government, his most recent position being Chief, Spectrum Management and Regulatory Affairs Division, International Broadcasting Bureau, US Information Agency, a position he held for six years. Prior to that he worked for the Board for International Broadcasting (RFE/RL) and the Voice of America in various technical management capacities.--David Sumner, K1ZZ

* Welcome to HQ: Dan Miller, K3UFG, joined the ARRL Educational Activities Department on April 17. His primary duties will involve deciding on new videos to add to the EAD tape library, working on the Novice/Tech Instructor Guide, working with NASA on the evaluation system for SAREX lesson plans, and other activities. Dan, 51, is from Erie, Pennsylvania, and holds an Advanced class license. In the past, he has done school demonstrations involving SAREX, taught licensing classes, edited a club newsletter, been an active traffic handler, and served a president of Radio Amateurs of Erie. Dan*s HQ telephone number is 860-594-0340.

* Open late to serve you! To better serve our members and customers, the ARRL Publications Order Desk has extended its hours! Now you can reach an ARRL customer service assistant from 8 AM to 9 PM Eastern Time, Monday through Friday. Call toll-free: 888-277-5289 (US only). Our friendly staff will be available to help you place your order, renew your membership, or find an ARRL dealer in your area.

* New e-mail address for e-pubs, software support: Effective immediately, the e-mail address for support of ARRL electronic publications and software is epubs@arrl.org. The tis@arrl.org address remains valid for technical information service (TIS) inquiries.--Jon Bloom, KE3Z

* Hams to operate from Biosphere 2: Amateur Radio will have a central role as the Biosphere 2 Center in Oracle, Arizona, celebrates Earth Day April 20 with special event station K7RST. The Earth Day special event will take place on the lawn of the human habitat where the former Biospherians lived. Frequencies include 7.117.5, 7.238, 14.245, 21.138, 21238, 28.405, and 50.130 MHz, plus a two-meter repeater on 147.140 (+600 kHz). The special event station with operate with the cooperation of the Southern Arizona DX Association, the Radio Society of Tucson, the Tucson Repeater Association and the Old Pueblo Radio Club. Operation begins at 1300 UTC April 20 and concludes at 0000 UTC April 21. A commemorative certificate is available. Send a QSL and a 9x12 sase to K0DVH listing signal report and contact number on your card. For more information, contact Dave Kalahar, KD4HXT, e-mail cool-fm@theriver.com. For more information on Biosphere 2, contact Bryan Thorpe, KE6TCF, tel 800-992-4603, ext 1; e-mail bthorpe@bio2.edu; WWW http://www.bio2.edu.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J.

Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Jeez Len, except for a few facts you got it almost right.

You use the same tired old arguments.

First...my real point (you seemed to miss it) is that there are

lots more than one whiners on the *various* newgroups that are no code

or

the 5wpm wonders that REFUSE to try to upgrade..please note this does

not

mean all or any other such.

They are missing a lot of fun by taking a 'moral' stand. The pragmatic approach is to take the #$%^ code test, upgrade, get on HF ....and keep fighting to change the world or at least the ARRL WARU and any other organizations. eg they don't want to get involved...they just want to whine.

BTW Len when you're checking your 'facts' you might notice I was KC3GT before I was KF0NC... and the 1990 event you represent as 'fact' was an address change. I had changed the call 2-3 years before.

And I don't even remember when I got my advanced, someone could check the
old callbooks I suppose.

BTW my first license was '58 or so. I did have a lapse in there while I served in viet nam but I got back in there later.

So I guess I should be more respectful of an older ham even if he makes unwarrented assumptions, misrepresents facts, etc.

Incidentally my code speed is still about 15wpm today. I don't think much of the code, slthough I do use it, but I'm not going to sit around, and waste my time bitching about the piece of HF I'm not allowed to use.

If I want it I'll work on my code and pass 20 WPM. But it's my choice.

Here's one for you... the only valid argument you or anybody else I've heard so far is that you can fail by failing the code element while it only takes 70% for all the rest... lets make
code, PACTOR, AMTOR, Fast Scan, SLO Scan, Packet, SS, Microwave, high power and the rest of the modes ALL SEPARATE ELEMENTS, 70% required to pass any element.

Fail any element and you don't get a license. That should level the playing field.

Next someone will bitch because they don't see the relevance (a common argument)

I'll say it again...'I want it' don't cut it.

73,

Stan KF0NC (license address CHANGED in 1990 you might want reexamine

your other assumptions)

1232. Likelyhood of RF interference?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-18 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc4b99$5f9dfc40$3c08aacf@viking.add-inc.com>
Source record: 200150

Hello,
I will be running up to 100watts on 2-80M with new equipment (Icom 706 and GAP Challenger DX, ground mounted) and I was wondering what the chances are that I will interfer with my neighbors TV/phones/stereo and what I can do on my end to decrease my potential for such interference. My house is about 50 yards from the nearest neighbor and my planned location (which minimizes the view of the antenna from the road) for the antenna is about 30ft from my house and 50 yards from the nearest neighbor. I am trying to avoid problems ahead of time since that seems easiest.

>Korins responses were, "Off the air, not curtail"

I didn't realize we were talking about K2WK. I've worked him quite a
few times. While I don't know him personally, I do know he's *NOT*
some kind of arrogant idiot.

I've seen this kind of "neighborly" approach in other people's
situations before. One guy, I helped him install two TH7s and a
90-footer. We had a few RFI problems around the neighborhood; a
handful of Radio Shack toroids left everyone happy. With one
exception. Guy didn't want us in his house, he just wanted the tower
removed. Went so far as to have his alderman introduce a 35-foot
tower ordinance. (the ham representing a district across town got it
promptly quashed..) Luckily, he wasn't prepared to resort to the
courts; after his ordinance failed, he let us fix his phones. (and is
at least civil to his neighbor)

Unfortunately, this is a potential problem for EVERY amateur. For
that matter, it's a potential problem for every citizen. The same
people who won't accept a tower on their neighbor's lot are likely to
not accept your kids' toys left in the back yard, or that handful of
dandelions in the side yard, or your cat, or...

BTW 3 acres is certainly enough to get the antenna far enough from
neighbors for 1500 watts.

PRICE IS $350.00

I have a Privatear Pocket Radio for sale with it's original box.

mgf: 1951 Privat-Ear Corporation, New York 60, N.Y.
type: tubes. (two very small tubes) the tubes are about the size of
small christmas lights
condition: in my opinion VG+
color: off-white (beige)
size: about two packs of cigarettes tall
audio: uses an earplug (no speaker) with a built-in cord of 3 ft.
power:batteries (long ago dead) 22 1/2 volts dc (M-215) & two 1.5
volts AA dc.
antenna: telescope
box: the original box is in VG condition

I give a 100% satisfaction on this radio or gladly return your money.
I have references from other parties that I've done business with if
needed.

ST>People who've passed the code and upgraded I am perfectly willing to
ST>listen to even if they can't come up with any new arguments. Those that
ST>think they should be given the full HF privileges just because they
ST>*want* them are just plain sad 90's welfare mentality cases.

Please express a reason for retention of the code test for an amateur license other than "you have passed a code test, therefore all others must also pass a code test." All the tough-guy talk, the name-calling of "no-coders" (actually, no-code-TEST advocates) does nothing but color your version of the amateur HF-access license as nothing more than a Hazing Ritual. You wish to lord it over others who haven't been able to master the code or don't think that a code test is necessary for licensing...fine, that makes you feel good. It does nothing for your side of the argument...nor does the use of negative ideological attributes against "no-coders."

ST>"I want it' don't cut it.

WHY is the code test STILL NECESSARY? Logical reasons, please, not the Morse Myths. Should the governments support Hazing Rituals just to please those who've had to pass a code test? Shall the code test remain in place in perpetuity just because it has never been removed since the first radio regulations?

ST>If this Ham radio is supposed to be something fun to do, and the HF
ST>privilege desireable to have, then get the damn upgrade and keep
ST>fighting to change, don't just sit in the middle of the floor and
ST>shine.

All the no-code-TEST advocates in rec.radio.amateur.policy except one have already passed a code test for a higher-class license. Most of them have "upgraded" to Advanced just as you did in 1990.

On the "90's mentality" phrasing: Morse code was a valuable commodity in the 90s for business and government communications. The 1890s. By 1900 the teleprinters were making serious inroads into landline telegraphy and by the 1920s had already displaced telegraphy as a text communications medium. About the only thing that saved the telegraphic skills was the advent of Radio...the first radios were consigned to on-off keying communications out of low-tech necessity. In 1912 it made

sense to have a telegraphy skill test for a radio license. In 1997 it does not...yet the telegraphy test is still the only operating test given to applicants for a radio amateur license having HF-access.

There are a number of rationalizations made in favor of the code test. There is only one legal requirement and that is based on national foreign policy. All the rest of the rationalizations are based on old, outmoded reasons or on the "we had to take the code test, therefore everyone else has to also" variety. Government regulations are not applicable to fraternal hazing rituals nor the sour grapes of old-timers claiming some "toughness" rating above younger generations. All the bad names in the world may be written against "no-coders" but it does not change the fact that the code test is no longer a logical reason for an amateur license examination requirement to satisfy the government that a license would be able to operate and maintain a station.

>
>Pat K5AO

Please explain. What is enough? Specifically how much should I pass and why? I have the HF access I need for my interests. I certainly don't feel a urge to expand my horizons in the CW portions of the bands. The little snippets of the phone portions reserved for Extras seem for the most part to be abandoned.

When I came into this hobby I had an interest in CW as a part of the hobby. Attitudes like yours and Ronland's and others have taught me the error of my ways. If the people you meet on CW are anything like the procode fools that inhabit these news groups why on earth would anyone ever want to converse with them. You boys failed to run me off of amateur radio but you sure did one fine job of running me, and I am

sure a number of others, off of CW. Keep up the good work then there will be more of use to straighten out the band plan and give phone the additional bandwidth it truly deserves.

<> <> <> <> <> <> <> <> <> <> <> <> <> <> <> <>

The enclosed information is something I almost let slip through my fingers. Fortunately, sometime later I re-read everything and gave some thought and study to it.

My name is Christopher Erickson. Two years ago, the corporation I worked at for the past twelve years down-sized and my position was eliminated. After unproductive job interviews, I decided to open my own business. Over the past year, I incurred many unforeseen financial problems. I owed my family, friends, and creditors over $35,000. The economy was taking a toll on my business and I just couldn't seem to make ends meet. I had to refinance and borrow against my home to support my family and struggling business. I truly believe it was wrong for me to be in debt like this. AT THAT MOMENT something significant happened in my life and I am writing to share my experience in hopes that this will change your life FOREVER....FINANCIALLY!!!

In mid-December, I received this program via email. Six months prior to receiving this program I had been sending away for information on various business opportunities. All of the programs I received, in my opinion, were not cost effective. They were either too difficult for me to comprehend or the initial investment was too much for me to risk to see if they worked or not. One claimed I'd make a million dollars in one year...it didn't tell me I'd have to write a book to make it.

But like I was saying, in December of '95 I received this program. I didn't send for it, or ask for it, they just got my name off a mailing list. THANK GOODNESS FOR THAT!!! After reading it several times, to make sure I was reading it correctly, I couldn't believe my eyes. Here was a MONEY-MAKING PHENOMENON. I could invest as much as I wanted to start, without putting me further in debt. After I got a pencil and paper and figured it out, I would at least get my money back. After determining that the program is LEGAL and NOT A CHAIN LETTER, I decided "WHY NOT".

Initially I sent out 10,000 emails. It only cost me about $15.00 for my time on-line. The great thing about email is that I didn't need any money for printing to send out the program, only the cost to fulfill my orders. I am telling you like it is, I hope it doesn't turn you off, but I promised myself that I would not "rip-off" anyone, no matter how much money it cost me!

A good program to help do this is Ready Aim Fire,
an email extracting and mass mail program
@ http://microsyssolutions.com/raf/

Another more advanced one can be found at:
http://www.extractor.com/ads.htm

In less than one week, I was starting to receive orders for REPORT #1. By January 13th, I had received 26 orders for REPORT #1. When you read the GUARANTEE in the program, you will see that "YOU MUST RECEIVE 15 TO 20 ORDERS FOR REPORT #1 WITHIN TWO WEEKS. IF YOU DON'T, SEND OUT MORE PROGRAMS UNTIL YOU DO!" My first step in making $50,000 in 20 to 90 days was done. By January 30th, I had received 196 orders for REPORT #2. If you go back to the GUARANTEE, "YOU MUST RECEIVE 100 OR MORE ORDERS FOR REPORT #2 WITHIN TWO WEEKS. IF NOT, SEND OUT MORE PROGRAMS UNTIL YOU DO. ONCE YOU HAVE 100 ORDERS, THE REST IS EASY, RELAX, YOU WILL MAKE YOUR $50,000 GOAL." Well, I had 196 orders for REPORT #2, 96 more than I needed. So I sat back and relaxed. By March 19th, of my emailing of 10,000, I received $58,000 with more coming in every day.

I paid off ALL my debts and bought a much needed new car. Please take time to read the attached program, IT WILL CHANGE YOUR LIFE FOREVER! Remember, it wont work if you don't try it. This program does work, but you must follow it EXACTLY! Especially the rules of not trying to place your name in a different place. It doesn't work, you'll lose out on a lot of money! REPORT #2 explains this. Always follow the guarantee, 15 to 20 orders for REPORT #1, and 100 or more orders for REPORT #2 and you will make $50,000 or more in 20 to 90 days. I AM LIVING PROOF THAT IT WORKS !!!

If you choose not to participate in this program, I'm sorry. It really is a great opportunity with little cost or risk to you. If you choose to participate, follow the program and you will be on your way to financial security.

If you are a fellow business owner and you are in financial trouble like I was, or you want to start your own business, consider this a sign. I DID!

Sincerely,
Christopher Erickson

PS Do you have any idea what 11,700 $5 bills ($58,000) look like piled up on a kitchen table? IT'S AWESOME!

"THREW IT AWAY"

"I had received this program before. I threw it away, but later wondered if I shouldn't have given it a try. Of course, I had no idea who to contact to get a copy, so I had to wait until I was emailed another copy of the program. Eleven months passed, then it came. I DIDN'T throw this one away. I made $41,000 on the first try."

Dawn W., Evansville, IN

"NO FREE LUNCH"

"My late father always told me, 'remember, Alan, there is no free lunch in life. You get out of life what you put into it.' Through trial and error and a somewhat slow frustrating start, I finally figured it out. The program works very well, I just had to find the right target group of people to email it to. So far this year, I have made over $63,000 using this program. I know my dad would have been very proud of me."

Alan B., Philadelphia, PA

A PERSONAL NOTE FROM THE ORIGINATOR OF THIS PROGRAM

By the time you have read the enclosed information and looked over the enclosed program and reports, you should have concluded that such a program, and one that is legal, could not have been created by an amateur.

Let me tell you a little about myself. I had a profitable business for ten years. Then in 1979 my business began falling off. I was doing the same things that were previously successful for me, but it wasn't working. Finally, I figured it out. It wasn't me, it was the economy. Inflation and recession had replaced the stable economy that had been with us since 1945. I don't have to tell you what happened to the unemployment rate...because many of you know from first hand experience. There were more failures and bankruptcies than ever before.

The middle class was vanishing. Those who knew what they were doing invested wisely and moved up. Those who did not, including those who never had anything to save or invest, were moving down into the ranks of the poor. As the saying goes, "THE RICH GET RICHER AND THE POOR GET POORER." The traditional methods of making money will never allow you to "move up" or "get rich", inflation will see to that.

You have just received information that can give you financial freedom for the rest of your life, with "NO RISK" and "JUST A LITTLE BIT OF EFFORT." You can make more money in the next few months than you have ever imagined.

I should also point out that I will not see a penny of your money, nor anyone else who has provided a testimonial for this program. I have already made over FOUR MILLION DOLLARS! I have retired from the program after sending out over 16,000 programs. Now I have several offices which market this and several other programs here in the US and overseas. By the Spring, we wish to market the 'Internet' by a

partnership with

1244. FS: Alinco DR-610T dual band mobile

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-18 00:00:00 UTC
From: stewart@wt.net
Message-ID: <3356f770.2366053@news.wt.net>
Source record: 200162

I have an almost brand-new Alinco DR-610T for sale. It is in absolute mint condition, with all original box, packing supplies, manuals, etc. I'm asking $450.00 plus shipping.

If you are interested, reply to: stewart@wt.net

In case you're not familiar with the radio, it is the top of the line Alinco dual band and comes jam packed with all sorts of amazingly cool features. For example:

120 channels (30 UHF, 30 VHF, and 3 "sets" of 20 channels each which can be mixed UHF and VHF.

Remote control of most of the functions of the radio (e.g. cross-ban repeater functions) with DTMF tones from a handie-talkie (and from the mic as well, of course).

Full and flexible cross band repeater.

9600 baud packet ready.

"Channel Scope" technology allows you to monitor adjacent channel OR frequency activity (VHF only, UHF only, or both at once!!!).

Detatchable remote-mount faceplace.

Can be used UHF/VHF, VHF/UHF, UHF/UHF, or VHF/VHF.

Internal duplexer.

CTCSS encode.

Expanded VHF and UHF receive.

Cross band repeat:

Power: VHF 50/10/5, UHF 35/10/5.

This is a GREAT radio... Let me know if you want it!

Stewart

>Gerry, W1GD

Bravo! Bravo! We need more people like you defending this nice hobby of
ours (mine for 10 monthes now). Such calm, intelligent information and
debate is extremely helpful.

Even with my HT on 5 watts, it causes nasty TVI with my TV (rabbit ears,
no money to waste on cable (grad student)). One of my neighbors
complained of interference to me recently, and I told her about my
hobby. She saw me outside in the rain a couple nights talking into my
hand and asked if I was a "pirate station"! I told her about amateur
radio and SKYWARN (spotting in the storm) and how to protect from
interference. FOund out most was caused by my 10m rig, and the
random-length wire strung aroung the apartment! I told her I'll keep my
10m activities down (not hard!) until she can get some fixes. I even
told her I'll help her if she has any questions.

So, interference _CAN_ happen QRP. All you need is to talk. If the other party is reluctant to listen, well, in this sue-happy country (USA), you pray the courts will be on your side!

> every imagined type of interference, that I hold my anger.

well, i don't think amateur radio antennas are singled out -- people may call them "ham antennas" but thinking about the larger picture..

there used to be a need for every TV to have a good antenna to get a good picture from a broadcaster. things like CATV and satcom have changed that but for those who moved to cable, many left the antennas up to rot.

same with the end of the CB boom in the 1970s.

so now, people just assume that if an antenna goes up that it will rot and be allowed to decay and fall and damage stuff and look bad. if amateur radio was to do a single public relations operation, it would be to catalog antennas that are in disrepair and contact their owners to either help them dispose of them if they're not being used or help to get them fixed up such that they're safe and effective...

Uh-oh. Voice of authority about to speak....

>Stop trying to monkey around with the jumpers in the Yaesu 530s or any
>other rigs from Japan for the past 7-8 years. It will do no good.

You're obviously mistaken. I have, firsthand, modified both an IC-2000H
and an FT-530 for out-of-band transmit. In the case of the FT-530, it
also enabled increased out of band receive. I've also examined an FT-50,
also purchased in the last few years, and verified that it was
modified for out-of-band transmit, as well as a TH-78A.

>Here is why.

Well, the explanation need to be *really good* to convince me and several
pieces of test equipment that what I'm seeing isn't really happening.

[Interesting J-mark story deleted]

>So, what does this have to do with monkeying around with the jumpers?

Well, my experience is "nothing", but I'll read on...

>Used to be, back in the days before the J mark, the Japanese put the
>same CPU in all radios and set the freq range with jumpers. This meant
>that you could change a couple of jumpers and make your ham handheld
>cover unbroken from 107 mhz to 1.3 gig, or some such foolishness.
>
>No more. Now, you can mess around with the jumpers and make the DISPLAY
>show weird freqs but it ain't gonna transmit outside the ham bands.

Oh. I see. Hmmm.... I suppose I'm not really seeing a IC-2000H transmit
at 174MHz, or an FT-530 transmitting at 476MHz? Perhaps the IFR is
confused, too? There really are still radios being made in Japan and
sold in the USA that *will* transmit out-of-band after modification. In
the case of the IC-2000H, a diode is removed and the CPU reset. The FT-530
requires a jumper to be cut (wire loop) and two keypad reset sequences.
The other radios mentioned were similar.

>Only exception is Japanese HF rigs which use the same CPU for amateur,
>military, and commercial. That is why, after some minor surgery, my
>ICOM 729, which I purchased in Akihabara in 1992, transmits from 2.1 mhz

>through 30 mhz, non-stop. But the handhelds that I purchased in Japan
>at rock-bottom prices had to be sent to ICOM USA for CPU replacement so
>they cover the US bands.

I suspect you're dot-on correct with respect to the J-mark, but I
know that the radios mentioned above that I bought in the USA really
were trivial to modify, and no amount of flaming....

>Of course, I expect that I will be flamed by some know-it-all who
>doesn't know sushi from sashimi. Oh, well, believe what you want.

... like this is going to change reality. It seems that radios intended
for non-Japanese markets are still often easily modified for out-of-band
transmit. I mean, I've *verified this* myself - so, rather than believing
what I want, I'm believing what I've seen. Hey, I believe you about the
J-mark, but I must ask you to believe me when I sya that you can still buy
modifiable radios in the USA.

** Of course, all transmit tests were done into non-radiating dummy loads **

A correction. The origional poster gave the wrong spelling of the hams name and incorrect call sig,

Correct name is

Correct name: Kornienko (no s)
Corrdct Call Sign: K2WK

Im told he is a "big gun" multi-multi contester.

No you can all go and argue over a matter that does not concern you but do it with the correct information.

If you're interested in research you don't need a license. Just find a ham nearby to assist you with on-the-air testing. (I suspect very few researchers at Icom, Kenwood, Yaesu, MFJ, et al, are licensed hams.)

>What's more important - SQL SERVER, Pascal, MS C++, RITTY or CW???

To whom? Out of the above list, CW is the most important item to me.

It's called the General class. It gives one access to all amateur
bands and all modes.

>ARRL had this neato picture of all these happy hams, busily buying
>League licensing publications en route to upgrading.

There was only one licensing pub - the ARRL License Manual. It contained
all necessary study info for all classes of licenses. With or without IL,
pub sales would have been about the same.

Well since CW is out dated Mode, then Im sure you would agree Phone is outdated Mode, why not just have you guys go ahead and take a real written test and just give you Modern up to Dated Modes to use, of course CW and Phone would not be Allowed with your new License since both our Outdated, and you really wouldnt want to use them anyway right?

I dont understand why these guys would want to ever use Phone on HFits ancient also and Im sure they would Prefer Digital Modes. So lets just make a Real HF written Test, and let all these peoplewho want to use Modern Digital Techs, operate only Modern Digital Modes, and prohibit there use of Ancient Modes such as CW or of Course Phone.

Hank!
Don't forget that domain names and IP adresses are two different matters.
Nothing says that there need to be an IP-address for every domain name
and vice versa.

So - the answer to the second part of your question is 'no' !

[lotsa good stuff snipped]

On a somewhat related topic, is there anyone who has surveyed which
non-amateur transmitters (or radars for that matter) can be heard
via moonbouce (or even moon bounse :))? I've been told that the
NAVSPASUR VHF (216.98 MHz, I think) transmitter at Lake Kickapoo, TX
is easy to hear when the moon passes through the beam.

Marty, what is getting bad? Is the equipment getting bad and hams want
to sell it? Is the introduction of new radios getting so bad that hams
have to sell their 4-month old "state-of-the-art" stuff to buy this
weeks Yae-com-wood intruduction? Maybe we should just buy radios and
not sell them - like guns, you can never have too many!
I would rather see folks selling stuff than the inane "whats the mod (so
I can transmit on COP frequencies or listen to cellular phones) posts?
And let us not forget the "Teddy Bear" posts that just wouldn't stop.
So, gosh, someone is trying to sell a radio. Should we also be
concerned that others are trying to find or buy, as in WTD and WTB,
radios as well?
I'll probably feel a little guilty for responding to this, but sometimes
you feel like a nut...

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #212 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 25-Apr:
-
1. NJ Superior Court Judge Tells RFI Victims to "Lump It"
2. Radio Shack Pulls Popular New Dual-band HT from Shelves
3. ARRL Asks for FCC Rules Change to Allow Privatized Enforcement
4. New Bill in US Senate Seeks CB Enforcement at State/Local Level
5. Weekly Propagation Forecast
6. "The RAIN Dial-up" from Chicago
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Special Event Station Calendar
9. "Tower Climbing Safety" - with Greg Stoddard, KF9MP
10. Ed Tilton, W1HDQ, SK; Originated QST VHF/UHF Column
-
Funding to defray our transmission and production expenses has been
provided by a grant from Chris Huber, N6ICW, of Sacramento,
California, where "This Week in Amateur Radio" is heard Saturdays at
6:00 PM on the N6ICW repeaters, on 147.195 MHz in Sacramento, and on
145.15 MHz in South Lake Tahoe, serving Sacramento, the San
Francisco Bay area, Tahoe, Reno, and Carson City.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
amateur radio club or repeater operator if "This Week in Amateur
```

Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

>would necessarily substiantiate a need to use 1500 watts to anyone
>outside of amateur radio.

Pile-ups and busting through them was a normal occurance on the HF CW marine bands. In fact, a worldwide pile-up occured every 6 hours, as ships would race to pass time-sensitive WX reports to any shore station whose CQ they could copy. While working at NMO I'd have 4 and 6 MHz in my left headphone, and 8 and 12 MHz in my right (during daylight hours I'd have 8, 12, 16, and 22 MHz in the 'phones). The strongest signals would of course get to pass their WX first. As soon as one WX OBS was copied both headphones would be filled with more ships calling. Calling this "deliberate interference" is probably how an outsider would wrongly observe it, but to those actively participating it was a natural form of communicating; within the 30 minute window that was available everyone would get their turn to pass their WX, and I would have collected about 150 coded reports and passed them on via TTY to OBS METEO WASHINGTON. This ho-hum event occured at every shore station 'round the world simultaneouly every 6 hours for longer than most of us have been living.

Whether on the ham or the marine bands I honestly can't think of a more efficient way to handle a large number of stations who are focusing their attention onto a single op.

The weak of heart should not participate. (But a few cups of *stong* Coast Guard coffee sure helped to get the fingers dancing on the type-writer.)

> The 95 simply is not capable of meeting my setup. No offense
> it just does not have the capabilities. Even the 100 would be
> pushing it.

There's been enough misinformation and prejudice displayed in this thread that I just can't resist jumping in and attempting to bring at least a bit of rational, unemotional discussion to the topic.

I have run KA9Q NOS on my 100LX without any problems at all, and I know several folks who have run it on the 95LX without any problems. I can't comment on JNOS, but the suggestion that the 95LX and 100LX aren't packet capable is simply untrue. The major differences (as a packet terminal) between these three palmtops are in the display size and the built-in terminal emulation software.

The 95LX has a 40 column display, which many folks find frustrating when using it with a BBS designed for an 80 column display. The 100LX and 200LX both feature 80 column displays, but some people find the font so small as to be unuseable. Pick your poison.

When using the built-in terminal emulator, many people find display writes very jerky and annoying on the 100LX (and, I believe, the 95LX.) This is due to the fact that the built-in monitor program steals cycles to check for certain events unrelated to datacomm. This can also be a problem if you run your favorite terminal emulator in DOS while DOS is running as a task under the built-in monitor. This problem can be solved by terminating the monitor and giving DOS total control over the system. FWIW, the old shareware version of ProComm runs like a champ.

> I have gotten alot of email on 200lx users and seekers trying
> to duplicate my results. And with the 95 I simply can not
> guarrantee the same. ANd I dont have the time to explain
> that to 100 people.

The version of KA9Q that I run on my 100LX was adapted for use on the 95LX, and can be found at "ftp://eddie.mit.edu". If you already have experience using any NOS variant, you should be able to get this version of KA9Q NOS up and running on a 95LX or 100LX without any problems.

I haven't run packet on my 100LX for quite some time, but I still depend on KA9Q NOS when I need to hang my 100LX on a SLIP connection to my Linux system. Bless you, Phil Karn. ;-)

>act of congress. No Court could save us. It is the will of the people.
>We NEED the sympathy of the majority of citizens by and large to keep
>the hobby going. I think that is the point being made here.
>

Amateur radio is established by INTERNATIONAL treaty. It would take an
INTERNATIONAL law to legislate it out of existence. If the government
banned amateur operations in this country, there would still be 250+
countries permitting it at this time.

A few years back a tornado devestated part of Plainfield, Illinois.
Many amateurs volunteered for emergency communications. I spent a day
assigned to the Will County Sheriff's command headquarters that was
the overall command post for the relief effort. Three different
times an officer told me that without the hams, they would NOT have been
able to do their jobs; we were the only communicators who could provide
communications between ALL agencies involved. Also, those with cell
phones learned they don't work well after the cell sites have been
destroyed, power has been knocked out, phone lines destroyed, etc.

In emergencies and disasters, many agencies are involved: local, state
and federal agencies, the American Red Cross, the Salvation Army,
private
business (someone has to provide fuel trucks for generators, food for
victims and volunters, etc.) and many others. We amateurs are in a
unique position as we are the ones able to provide personnel with
radios to all those involved enabling every agency/group/business to
communicate with everyone else. Technology will not eliminate our
importance to emergency communications.

Good point, Zack, however, have you noticed how closely the US
government follows international law and treaty when it does not
suit them? I am happy about the international framework for ham
radio - however, it does not moot my point - that ham radio is
NOT A RIGHT under our US Constitution, and we exist at the
whim of the 'will of the people' (you can extend that internationally
if you like, it still works).

Notice that some of our bands have shrunk because someone else
wanted them. Notice the other threats. I don't see international
opinion in the way.

The real point - we hams need to remain aware that our continued
existence requires some goodwill from the majority of citizens
here (and abroad too). I do not think we have an iron clad hold
on the frequencies just because we innately deserve it. I am happy
when we win minor battles against nasty people - but want us to
win the war in the long run with lots of ham radio friends and
supporters among ordinary non hams worldwide.

Source record: 200049

In article <wa2iseE8v9sy.5vI@netcom.com> wa2ise@netcom.com (Robert Casey) writes:
>One reason for requiring CW testing is to have that ability for emergency
>communications. That you'd be able to womp together a crude transmitter
>and send code.

Yeah, but don't forget about womping together a *receiver*. Without
that, you're just transmitting blind, and could be doing more harm
than good.

>Maybe true 40 or 50 years ago, but today's HT's and
>modern rigs are likely to survive a disaster, and be available for
>emergency use. And voice is faster than CW. Also, non hams could use
>the radios during the duration of the emergency in voice mode. Modern
>radios don't drift that much that a licensed ham must continiously
>monitor the adjustments of the transmitter. The ham could get some
>sleep and whatever while others handle emergency traffic. The ham
>would teach people to "push to talk", shouldn't take more than a few
>minutes to learn how to handle traffic.

Bad idea, and probably illegal too if the disaster communications isn't
directly related to an *immediate* threat to life. There's more to emergency
communications than operating the "push to talk". Without some training and
knowledge of proper emergency operating procedures, the net can deteriorate
into CB-like chaos. This generally can't be taught in "a few minutes".
And being licensed doesn't assure it either. Amateurs need to participate
in ARES drills and nets to garner the necessary skills *before* the balloon
goes up (some NTS skills won't hurt either).

>Point is that today's portable HT's and mobile mounted HF rigs are
>sufficiently rugged to survive and be avaliable for emergency service
>when a disaster hits.

True, but having the ability to affect repairs or jury rig something
is still pretty important. Knowing Morse isn't of much use, however,
if the problem is a damaged FM receiver. Receivers are generally more
delicate than transmitters, and are more likely to suffer damage in
a disaster. Antennas are even more likely to be damaged. An amateur
needs the skills to quickly evaluate damage and effect necessary
repairs (or to know when give it up as a bad job and start looking
for alternative equipment).

>And if the only ham at the disaster site needs
>to be relieved, others could easily handle the PTT mic key and use
>voice and listen to voice. I'd tell them to not mess with the
>tuning and such, and say "Mayday" and stuff.

That might be Ok if you're in a downed aircraft or drifting at sea,
but don't even think about it for the more normal types of emergency
communications amateurs do. The bulk of amateur emergency communications
falls under the headings of tactical and logistical support communications.
To do either effectively requires operator training in the *cooperative*
techniques of ad hoc network communications. This is *very* different
from some other amateur activities, such as Dxing. The only effective
ways to acquire these skills are to practice them *before* the balloon
goes up. It isn't something you can pick up in a few minutes.

>Part of the FCC's reason for having ham radio around is to have a large
>number of stations, some of who would survive and handle disaster
>traffic. Say 10% of ham setups survive and are usable, given enough
>hams, you can have emergency comm links.

If that were a big part of the FCC's reason for amateur radio, CB handles
it better since there are lots more of them. But you don't have a real
emergency communications system unless you have trained operators competent
to operate it. All you have is a mob yelling into radios. That's even
true when the mob holds amateur licenses. Effective emergency communications
requires specific operator training. Our license exams don't address that
in any realistic way. It is something you have to learn *after* you're
licensed. Join ARES, join NTS, participate in packet networks. Learn how
to work in a cooperative and orderly fashion with other amateurs. That's
the heart of emergency communications.

>
>Jeff KH2PZ / KH6

Gee, that's an absurd and inefficient way to handle tactical traffic.
When we do Wx spotting nets, net control requests stations with

severe Wx to report to call first, those who've experienced other *significant* changes in Wx conditions since the last report to call next, and those with only routine information to queue up last by call sign order. For trained operators, that moves smoothly and quickly, getting the most significant and time critical information passed first, and filling in the lesser information in an orderly manner.

Undisciplined brawls are not an efficent way to accomplish a task. Orderly groups perform much more effectively. That's why armies aren't run like a mob. For net operations, most stations will know their relative position in the queue since mostly the same stations report at each poll, so unnecessary transmissions are reduced, and information flows quickly.

If what you describe was normal operating procedure for Coasties, no wonder that they abandoned it for digital systems where channel discipline and order are enforced by the machine protocols. One would have thought that operator discipline would have been sufficient, but apparently not. I suppose coasties never heard of queueing theory, but I'm surprised that, as a math major, you aren't familiar with it. There are optimum ways to handle information flows, but the chaos you describe isn't one of them.

In spite of your personal preferences, the various rec.radio.* newsgroup
charters specify that the WTB and FS ads are supposed to go into
rec.radio.swap. It helps to keep the noise level down.

Not small enough. There are a lot of very well-known big guns who
dive into the pile-up every time to work their rare DX "buddy" for
maybe the 18th time, ignoring the fact that there are several dozen
other guys waiting on the frequency for a chance to work a new
country.

In the UK, the regulations actually state that although the ham is
routinely licensed to run up to 400 watts output, there may be some
situations in which it will not be possible to do this (e.g. very
close proximity to neighbors, living in condominiums, etc).
Therefore, the license does not confer an *absolute* right to run
maximum power in every circumstance.

On a more positive note, new legislation has just been introduced in
European Union (EU) countries (including the UK) whereby all consumer
electronic equipment sold in the EU must have a specified level of
immunity to rf breakthrough as well as satisfying certain safety
standards.

The true purpose behind the morse code test elimination crowd is to coddle the welfare-state "I want it all for nothing" mentality. Want to watch something funny? Suggest elimination of all code examinations below 20WPM, requiring 20WPM for any class of amateur license and watch the "gimme" crowd outcry faster than a welfare recipient without a check on the 4th of the month.

The requirement exists, so "just do it" to get the privileges, or don't do it and don't get the privileges -- its that simple.

MD wants to assciate those of us that oppose continued
code testing as "welfare state" proponents yet he fails to
see that it is only the welfare state mentality of affirmative
action (by mandating code) that keeps the interest and use alive.
If that isn't true, then there is NO reason for code testing because
it will continue to be used and learned after an end to code testing.

>Want

If code testing at 5wpm makes no sense, why would you
expect anything but a more adamanet opposition if
20 was suggested as the requirment.

>The requirement exists, so "just do it" to get the privileges, or don't
>do it and don't get the privileges -- its that simple.

Translation, the rule exists and it thus is self justified.
As to doing it, how many times does MD need to have
it said that the majority of us opposing code testing
have already done it.

> 73 & gud dx de Paul, W1PR, ex-W1ETH

Paul,

My 1988 Callbook lists W1PR as follows:

Boston College Amateur Radio Club
Devlin Hall - Room 500
Geology Dept - Boston College
Chestnut Hill MA 02167

73 es BCNU

Paul - K9ERG

*** More ***

I checked my archives (us pack-rats have extensive archives) and found
the same listing in the 1967 call book. Your new call belonged to a now
defunct radio club.

Radio clubs typically do not have an envelope on file with the bureau.
I'm surprised that the W1 bureau held them for so long - usually they
purge their cards anually.

73,

Paul - K9ERG

PLEASE SPREAD THE WORD ON THIS TO ANYBODY THAT YOU THINK MIGHT BE INTERESTED.

Ham gear, test equipment and electronic parts from the estate of John Gruss, W1ACR will be sold at a tag sale on Saturday and Sunday, April 26-27 from 10 am to 4 pm in Danbury, Connecticut (near the CT/NY border.)

The location is 20 Edgewood St., Danbury at I-84 exit 4. Turn left off of the exit ramp, and take an immediate left onto Shannon Ridge Rd. Go past the stop sign to the 2nd house on the right.

There is literally tons of equipment and parts, and EVERYTHING MUST GO! Come on out for some great deals. For additional information, contact Brian Gruss, N1IXI, (203) 743 0914.

>Gee, that's an absurd and inefficient way to handle tactical traffic.

As I mentioned above, an outsider with absolutely no experience in handling 100s of ships calling him at once will not be able to comprehend this ITU-sponsored event. But of course Gary will believe he knows more than the ITU and the worldwide marine community.

>When we do Wx spotting nets, net control requests stations with
>*severe* Wx to report to call first, those who've experienced other
>*significant* changes in Wx conditions since the last report to call
>next, and those with only routine information to queue up last by call
>sign order. For trained operators, that moves smoothly and quickly,
>getting the most significant and time critical information passed first,
>and filling in the lesser information in an orderly manner.

You are so out of touch with what I was discussing I know not where to begin.

Our planet is about 75% water; the only weather-observation facilities on this portion of the earth's surface are the hundreds if not thousands of boats and ships transiting the ocean lanes. Thus, to provide for more accurate sea surface forecasts, the WMO encouraged all shipping worldwide to collect WX and sea data every six hours and encode it. No shore station was to charge for taking these obs. This *routine* data consisted of sea and swell height, water and air temperature, humidity, WX, cloud type and height, barometric pressure, et cetera. Upon receiving this data, the shore station passed it by TTY to WMO headquarters and computer forecasts would be made for the next 6 hours, and passed to shore stations to be broadcast.

This was a worldwide event, not some little local net.

>Undisciplined brawls are not an efficent way to accomplish a task.

The untrained amateur will never be able to understand. The ships would gather on the ship calling bands (each maybe 30 kHz wide) while shore station receivers automatically scanned each 30 kHz segment (on the 4,6,8,12,16,22 and 26 MHz ship bands). A ship would park on a particular freq'y and for minutes call a particular shore station who's CQ tape they could copy 599. As a shore op with my four rcvrs scanning up and down the calling bands I'd hear dozens of ships calling NMO NMO NMO NMO ... I'd stop a scanner, send DE, then pick out a dozen callsigns; I'd line up about 20 of them (5KWS UR NR1 WJMP UR NR2 FPLW UR NR3 ...), take their WX obs, then turn the CQ tape and scanners back on, and do it all over again. It was very orderly. This was all done at a minimum of 25 wpm.

>Orderly groups perform much more effectively.

And this every 6-hour worldwide event couldn't have been run any more effectively than how I've described.

>For net operations, most stations will know their
>relative position in the queue since mostly the same stations report at
>each poll,

"...same stations report..."??? Ships do not remain stationary and neither does HF propagation. A ship I took traffic from at 0600Z might be calling XSU (China) at 1200Z and VIB (Australia) at 1800Z.

It's obvious you have no HF traffic handling experience on the scale we routinely encountered (every 6 hours).

>If what you describe was normal operating procedure for Coasties,

It was SOP for *all* ship and shore stations worldwide. USCG radio stations number less than a dozen - that amounts to less than 1% of all shore station radio facilities 'round the world. With proper training (something which you obviously lack) the system ran smoothly and served the global community for longer than you've been on this good earth.

Too bad you didn't actually read what Gary wrote. It was one of the
most logical, rational, and evenhanded things I've ever read on this
topic.

>The true purpose behind the morse code test elimination crowd is to
>coddle the welfare-state "I want it all for nothing" mentality. Want

Nonsense. You're ranting from emotion, not debating from reason.
Nothing you say is even worth reading, much less responding to.

>-- Ted Kennedy has killed more people with his car than I have
>-- with my guns.
>--
>-- If you don't like my opinions, that's just too damn bad.

I find your boilerplate .sig particularly interesting. There seems to
be quite a correlation between this type of bigotry and the "CW
Forever" types.

A lot of newcomers may or may not know this. Hell, they may not know
hat a FAQ is, or where to look. The title of the group should be
rec.radio.amateur.equipment.discussion or something similar. If you
were new, and saw the title as it is now, wouldn't you think this is
the place to sell equipment? Also some servers may or may not access
all the groups.

On the subject of "noise level", some would think that the HRO and cat
pee threads, as well as old what's his name the teacher (Who
thankfully has been absent of late) might well be considered noise
level by many.

It would be a simple matter to set up a killfile for any ads
containing "FS, WTB",. etc.

Source record: 200077
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew

Under terms of the Report and Order in ET Docket 96-8, released April 10, 1997,
the FCC has announced that it will allow high gain antennas
for unlicensed transmitters operating in the 2400 and 5800 MHz
Part 15 allocations. These bands are shared with the Amateur Radio Service.

Under the new rules, very high gain antennas may be deployed at 2400 and
5800 MHz. Certain transmitter power reduction restrictions apply at 2400 MHz
but unlimited gain systems may be installed at 5800 MHz. These systems will
enable high speed Internet access using unlicensed systems. You can expect to
see these systems deployed rapidly as soon as 1998 to provide non-commercial
and commercial services on these frequencies.

The complete story, including the Report and Order, is now available online at:

Hello, I am still looking for a Motorola UHF Duplexer to buy for the 440-450 MHZ Band. It is model T1504A which is a 4 cavity unit. I am also interested in a two cavity unit, but I don't know the model number. Maybe it is a T1502A ? Please give location and asking price.

Thanks and 73, Bill DiCarlo- KA2QEP

1315. About no code and no common sense

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-19 00:00:00 UTC
From: Ed Legenza AA6NI <atued@best.com>
Message-ID: <3358DE94.332F@best.com>
Source record: 200079

My father died when I was quite young leaving my mom to raise the family of 5. She did but things like radio gear were out of the question.

I majored in TV and radio broadcasting but never went into the field. Unfortunately math was a limiting factor in changing my major to electronic engeneering.

So until I was in my late thirties I just ignored HAM radio even though it had seemed interesting when I was a kid. However, one day I was driving in Burlingame CA and saw a Ham Radio Outlet store. I had read how there was now a 5 wpm code requirement which seemed prety easy. So I said to myself, it will never get easier and went in and bought some study material. 30 days later I had passed my novice test. But greater things were in store.

The bug had bit, and in the next six months I devoured, yes devoured, anything about ham radio. I joined a local radio club which had code practice sessions twice a week. By the end of the six months I had passed my EXTRA class exam. The hard thing was not the code, but the mathematics I needed to learn for the Advanced test. Here I was lucky, as my brother in law has a masters in mathematics and works for Lawrence Laboratories in Berkeley.

My basic education was typical for US kids in the 60's, other than that I have no realy advantage of super brains or such. The point is, when the bug strikes, reasonably intelligent people can qualify to become hams.

So carping about the code or the written tests doesn't make much sense. You see, before the bug struck me, I don't think I would have made a good ham. It didn't interest me enough at that time to learn the code, the theory and most of all the on the air courtesy.

You know, that is the one subject I never hear discussed. All I hear is weather there are enough new hams licensed to keep the hobby going, and from the prospective hams, how difficult the present process is. Rarely do I hear what, for me, HAM radio is mostly about, communicating. That requires knowledge and courtesy!!!!!

Even though I will catch some flack, since no code went into effect there have been some lower grade amateurs entering the hobby. No sir, I did not say that all no coders are bad hams, I know many who are electronic types who never wanted to bother with the code. But there are also some no brainers who can simply memorize a few questions and really don't get the point of the hobby.

So now I've started it huh....ok flames on!

One reason for requiring CW testing is to have that ability for emergency communications. That you'd be able to womp together a crude transmitter and send code. Maybe true 40 or 50 years ago, but today's HT's and modern rigs are likely to survive a disaster, and be available for emergency use. And voice is faster than CW. Also, non hams could use the radios during the duration of the emergency in voice mode. Modern radios don't drift that much that a licensed ham must continiously monitor the adjustments of the transmitter. The ham could get some sleep and whatever while others handle emergency traffic. The ham would teach people to "push to talk", shouldn't take more than a few minutes to learn how to handle traffic.

Point is that today's portable HT's and mobile mounted HF rigs are sufficiently rugged to survive and be avaliable for emergency service when a disaster hits. And if the only ham at the disaster site needs to be relieved, others could easily handle the PTT mic key and use voice and listen to voice. I'd tell them to not mess with the tuning and such, and say "Mayday" and stuff.

Part of the FCC's reason for having ham radio around is to have a large number of stations, some of who would survive and handle disaster traffic. Say 10% of ham setups survive and are usable, given enough hams, you can have emergency comm links.

DIVSIONAL NEWS

AGM PRELIMINARY REPORT

The VK2 Division's Annual General Meeting and Council Elections were held at Amateur Radio House yesterday. A full report will appear in a subsequent broadcast, but for now, here are the succesful candidates:

Michael Corbin VK2YC
Eric Fossey VK2EFY
Own Holdwood VK2AEJ
Peter Jensen VK2AQJ
Brian Kelly VK2WBK
Pat Leeper VK2JPA
Geoff McGrorey-Clark VK2EO
Eric Vandeweyer VK2KUR
Ken Westerman VK2AGW

Of the special resolutions and motions on notice, motions 1 and 2 were passed unanimously, motion 3.1 failed to gain the 75% majority required; a new motion to revise the proposed Memorandum of Association, and review it at a later date, was carried.

Because motion 3.1 was lost, motions 3.2 and 3.3 lapsed.

EXAMINATIONS

The next examinations will be held at Amateur Radio House on Sunday 4 May 1997. Applications close on this Thursday 24 April - acceptance of applications received after the closing date cannot be guaranteed. Candidates should report at 12 noon.

WICEN NEWS

Renewals were due at the end of March, so if you had not paid up by then (a mere $10) then you will be unfinancial. Naturally, you can pay for several years in advance.

The date of the Bridge to Bridge Speedboat Classic has changed; instead of 4th May, it is now on 6th July. The coordinator, as before, is David VK2KLX.

There is an Emergency Management course, at Hornsby RSL Club on tomorrow and Tuesday; please contact Barry VK2AAB for further details. Next month sees the Hawkesbury Emergency Expo, run by Kevin VK2CKD, over 16th-18th May; and another Emergency Management course will be held at the Terry Hills Emergency Centre on the weekend of 17-18th May, for which Barry VK2AAB is the contact.

Events further away include the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG on the 7th June; the Bridge to Bridge Speedboat Classic, run by David VK2KLX, is on 6th July; the Colo 24-hour Horse Enduro is run by Neil VK2XNF on 12th July; and the Oberon Car Rally, also run by Neil, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217. WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a somewhat-late summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the April issues of the various magazines.

"Electronics Australia" looks at a plastic battery; one of the best-kept secrets of the Second World War, Bletchley Park and its historical computer, is reviewed by our own Peter Jensen; the varieties of electronic warfare are discussed; an ingenious light dimmer is built for the mobile shack; those with some knowledge of electronics (don't we all?) can put their skills to a rewarding use; the Arbitrary Function Generator, described earlier, has its frequency resolution extended, and the software used to drive it is described; those involved in wiring up serial connections will find an RS-232 Utility Box of some use; a new section, dedicated to circuits that can be built for under $10, starts; the DDS-based HF to UHF signal generator is continued; and MPEG digital video is described.

"Silicon Chip" builds a "Picture-in-Picture" which could find use on ATV; Amiga 500 owners can install an IBM floppy drive with a simple

modification; a low-tech timer suitable for mounting in engine bays is built, along with a battery voltmeter; an old signal tracer is restored; and the series on digital oscilloscopes is continued.

"Amateur Radio" describes the Heard Island DXpedition; a simple 80m SSB/CW QRP transceiver is constructed; 2m mobile radios are compared for high-speed packet operation; a field strength meter, a crystal checker, and a capacitance meter, suitable for Novice projects, are built; and the Morse Mouse is corrected.

"Radio and Communications" builds a Beverage antenna; aviation acronyms are explained; a desk microphone is home-brewed; the Heard Island story appears here as well; US Naval Air callsigns are described; life on 50 MHz 50 years ago is mentioned; the FT-50 undergoes many modifications; and more abbreviations are explained.

Be listening next month for another summary of the local magazines.

-- Dave VK2ZTB

(Non-members who would like to see what's in the WIA society journal, Amateur Radio magazine, can get a sneak preview on Internet, at http://marconi.mpce.mq.edu.au/wia/federal/armag.html)

SPACE NEWS

MIR PROBLEMS

Ground controllers of the Mir space station have ordered the crew to minimum activity status after the partial failure of yet another oxygen generating system.

Three weeks ago a fire on the Mir took out one of the back- ups. Another system was reported overheating late on Thursday April 3rd and had to be shut down. A supply rocket with spare parts was launched toward Mir on Sunday the 6th but do not expect any live ham radio signals from the Mir crew until at least one of the systems is fixed. News reports say that could take several weeks to a month or more to accomplish.

--AMSAT-NA BBS, via Amateur Radio Newsline #1026

DX NEWS

SCARBOROUGH REEF - It is reported that the 1997 BS7H Dxpedition to Huang Yan Dao, Scarborough Reef, will start on April 28.

EASTERN MALAYSIA - 9M8/DF8AN can be found using CW on 20 meters. His length of stay unknown.

RWANDA - 9X4WW is currently active from central Africa.

ANGOLA - OH3MEP is active on CW , using the callsign D2M.

LIBERIA - ND3A/EL2 will be active until April 25.

JUAN DE NOVA ISLAND - FR5DJ/J and FR5KH/J will be active on all bands, using CW and SSB until May 15.

SCOTLAND - Special Event Station GS4TMS will be active April 19 and 20 from the heart of Braveheart Country.

SOLOMON ISLANDS - H44MS will be active, probably from Renell Island, Islands On The Air (IOTA) OC 127.

MIDWAY ISLAND -. KH4/K1NT will be active from Midway Island on 40 to 15 meters, until April 23. He will listen for European stations from 0430 to 0630z.

BRAZIL - A group of Brazilian amateurs will be operating from the Ecological Protection Park Reserve located on Sao Sebastiao Island, IOTA SA 028, until April 21, using the callsign ZY2IB.

GIBRALTAR - ZB2FX will be active until May 6. His operations will include activity on 160 meters and RS-12.

SAINT HELENA - ZD7WRG is active on 6 meters with a magnetic loop. He has been able to hear the V51 beacon and some South American stations.

--ARRL DX Bulletin 18, dated 17th April, 1997

Meanwhile, the city of Limerick in Ireland (home of the poetic form of that name, and the birthplace of your Divisional Broadcast Officer) is celebrating its 800th anniversary this year.
To commemorate this occasion, the special event station EI8OOL is now in operation and will be active until June the 30th.

The station is being organised by Brendan EI0CZ and all QSL requests should be routed to him.

--Irish Radio Transmitters Society News, 13th April

REQUEST FOR HELP

Many of you may recall Arie VK2AVA, who was very active on 40m SSB several years ago, and was usually found working into Europe via the long path each afternoon. It appears that Arie's health deteriorated in recent years, and he has since relinquished his callsign.

One of Arie's on-air friends has been trying to get in touch with him, but so far without success. If anyone knows the whereabouts of Arie, ex-VK2AVA, and how he is, would they please get in touch with Ron, G6LX. Ron's address is in the callbook, and he can also be reached via email at: com.tech@virgin.net

--Peter Nesbit VK3APN

FIRST SOLAR FLARE

In the USA, the National Oceanographic and Atmospheric Administration has confirmed the first Major Flare of the new solar cycle took place on 3rd

April.

The ham radio supply industry, which has been in a bit of a slump recently, has been waiting for sunspot activity to develop. The sale of desktop high frequency gear is at an all time low. The industry hopes that improved D-X conditions will lead to increased sale of the more profitable desktop high frequency transceivers.

--Amateur Radio Newsline #1026

CLUB NEWS

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton.

Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

Upgrade your morse. Classes on Thursday nights.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events,
==========
26th of April. Lecture on home brewing by Richard, VK2ARS.
3rd of May . Working Bee on the Antenna system. Weather permitting.
Thirty First of May. Lecture on TYV By Dave V.K2GIO.

--The Publicity officer Michael VK2EK

HORNSBY & DISTRICT ARC.

The next meeting is the Formal monthly meeting taking place, on the 22nd April 1997, at 8:00 pm. Meeting place is Mount Colah Community Centre. Pierre Close. Mount Colah. (Near the Eastern Entrance to the Railway Station). When all business has been taken care of, there will be a lecture on DXing by Stephen Pall VK2PS. the author of the DX articles in Amateur Radio. Visitors are most welfcome.

Training Classes.
==========
The training classes are still being held each Thursday Night, please ring Tony VK2BTL on 9487 3383, for further information.

The Club conducts, a net every Monday night, at 8.00pm. on VK2RNS.
The frequency is 147.250 with a positive offset. Please join in, all are welcome, listeners set your radio or scanner to 147.250 Mhz.

Should you wish to know more about the Club, or its activities, write to the Hornsby and District Amateur Radio Club Inc. PO Box 362. Hornsby

2077., or contact the Publicity Offtcer, John VK2WRT. on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer.

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE ON THE THIRD TUESDAY IN MAY, THAT'S MAY 20, AT AMATEUR RADIO HOUSE, PARRAMATTA. THE MEETING WILL BE DEVOTED TO THE CONSTRUCTION OF TEST EQUIPMENT AND - JUST AS IMPORTANT - HOW TO USE IT. THE PRESENTATION WILL BE THAT WELL KNOWN HOMEBREWER, VK2ARS.

THIS MONTH'S AMATEUR RADIO MAGAZINE CARRIES THE RESULTS OF THE 1996/97 ROSS HULL VHF CONTEST. WHILE THE WINNER WAS VK2FZ/4, THE SECOND HIGHEST SCORE CAME- FROM OUR VERY OWN GORDON MCDONALD, VK2ZAB. GORDON COMMENTS THAT WELL OVER 100 DIFFERENT STATIONS WERE AVAILABLE ON THE BANDS ABOVE 144 MHZ DURING THE CONTEST PERIOD,

AFTER SOME DISCUSSION THE GROUP HAS DECIDED TO MOVE ITS SUNDAY MORNING NET TO A REPEATER. THIS MAY SEEM AT ODDS WITH THE GROUP'S OBJECTS, SINCE THE REASON FOR THE NET IS TO PROVIDE A POINT OF CONTACT BETWEEN FM AND NON-FM OPERATORS. THE USE OF A REPEATER WILL MAKE THE NET MUCH MORE ACCESSIBLE TO THE FM FRATERNITY.

ACCORDINGLY WE WILL SHORTLY MOVE THE NET TO A TWO METRE REPEATER, TO BE ADVISED IN A FUTURE BROADCAST.

UNTIL THEN THE NET WILL REMAIN ON 146.55 MHZ SIMPLEX. DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

MID SOUTH COAST AMATEUR RADIO CLUB INC.

GREETINGS FROM THE MEMBERS OF THE MID SOUTH COAST CLUB! OUR NEXT QUARTERLY SOCIAL GATHERING IS TO BE HELD AT HANCOCK'S "H RANCH", LITTLE FOREST ROAD MILTON, ON SATURDAY 3RD MAY 1997.

TO REACH THE RANCH, TURN OFF THE PRINCES HIGHWAY 3KM NORTH OF THE HISTORIC VILLAGE OF MILTON AND FOLLOW THE SIGNS.

WE LOOK FORWARD TO A GOOD ATTENDANCE. THE SITE IS A
SPECTACULAR ONE, OUR SOUTHERN HOSPITALITY IS FAMOUS
AND WE WELCOME VISITORS.

ARRIVALS ARE FROM 10.30 HRS ONWARD. BRING YOUR FAMILY
AND YOUR LUNCH. THE CLUB PROVIDES THE TEA, COFFEE, ETC.
BARBECUE FACILITIES ARE ALSO AVAILABLE.

OUR GUEST SPEAKER IS TED WALKER, WHO WILL SHOW SLIDES
OF SOME OF THE MOST SPECTACULAR SCENES OF OUR AREA,
TAKEN DURING HIS BUSH WALKING TRIPS.

ALL YL'S AND XYL'S ATTENDING WILL BE ELIGIBLE FOR A LUCKY
DOOR PRIZE. HOPE TO SEE YOU THERE.

and just what is wrong with having a radio station that is capable of
operating at full legal capacity?

it's part of the privilege, and things that work fine at a low power,
aren't sufficient for when you're running that 3 kW input...

Too bad the USCG discontinued the 500 kHz CW watch; they missed another
distress call on that freq'y.

Russian-registry ship uses Morse Code after becoming disabled
off the Netherlands

The Vera (Russian-registry 1,750-dwt dry cargo ship) was disabled
recently when a bridge window broke during bad weather.
Water that entered through the hole shut down electrical equipment on
the bridge, and the ship drifted towards Terschelling Island, the
Netherlands. The only communication equipment working was a 500 KHz
broadcasting unit, which the crew used to send a CW (Morse Code)
distress signal. A station in Ostend, Belgium, received the signal and
the ship was assisted by tugs.

Hi.

Channel 19 is the CB Calling Channel, right ? In the UK, we use
S20 (145.5 MHz) as the Calling Channel for FM Simplex contacts. Also,
channel use tends to be highest on the channels closest to the
designated calling channel, as most amateurs will decide to QSY (change
frequency) up or down 1, 2 or three channels.

Martin.

SB DX @ WW $OPDX.301
Ohio/Penn DX Bulletin No. 301

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 301
BID: $OPDX.301
April 21, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR & The Daily DX, WB2YQH & 59(9) DXReport, N4GN, W5IJU & Island/DX News, K7JJ, W9UI, CT1EE, 9K2HN, DJ5AV & DX News Letter, F6AJA, G4BUE & DX News Sheet, HA0HW, JA1ELY, JH1NBN and LZ4BU for the following DX information.

3A, MONACO. No signs or QSNs were reported on the special event station 3A7A which is celebrating 700 years of the Grimaldi Dynasty. Activity is supposed to be until April 30th. QSL via the bureau. Meanwhile, 3A7G has been active and is reportedly celebrating the same event and will be active during the same time period. Activity has been reported on 20 meters. QSL via 3A2LF or via 3A bureau.

8R, GUYANA. Yuki, JH1NBN, will be active as 8R1ZB from April 25-29th. Activity will be on CW, SSB and RTTY with operations on 14-10 meters. QSL via JH1NBN.

A5, BHUTAN (Keep Your Fingers Crossed On This One!). The "DX News Sheet" reports Charlie, K4VUD, will try to be active in July while visiting Nepal (9N).

BS7H, SCARBOROUGH REEF (Excerpts Of An Update by Tim, N4GN). The BS7H 1997 DXpedition to Scarborough Reef is still on target to hit the airwaves in approximately two weeks. Team leader BA1OK met with JA1BK in Tokyo this week to finalize several key details of the operation. The U.S. members of the operating team--N7NG, W6EU and W6RGG--met at the recent International DX Convention in Fresno to review logistics issues with N4GN, a member of the two previous BS7H DXpeditions. Here are some details which will be of interest to the DX community:
* All necessary licenses, operating permits, landing permission, visas, and other documents are now in hand.

* BS7H will be on the air for approximately 7 days, starting 30 April. As with most DXpeditions of this type, the exact schedule is dependent

on weather, transportation and other variables.

* The following transmit frequencies will be used by BS7H:
CW--1826.5, 3505, 7005, 10105, 14024, 18073, 21024, 24895, 28024
and 50110 kHz
SSB--1826.5, 3790 (3750 secondary), 7065, 14195, 18115, 21295,
24935, 28485 and 50110 kHz
RTTY--14083 and 21083 kHz
- BS7H will also be QRV on the Russian RS satellites.

* DXers in Japan should QSL via JA1BK. All others should QSL via W4FRU.

For additional information, please visit the BS7H 1997 Home Page
(http://www.iglou.com/n4gn/sr/) or contact Tim Totten, N4GN, at e-mail
n4gn@iglou.com or fax +1-502-239-7766.

ADDED NOTE: OPDX InterNet Subscribers will receive an unedited version
of Tim's (N4GN) press release as an additional bulletin.

BV, TAIWAN. The "59(9) DXReport" states Johannes, DL5AUJ, will visit
his friend Hans, BV3/DL4AMJ, in Taiwan from May 5-13. He will be active
as BV3/DL5AUJ on all bands. He will also take part in the CQ Mir DX
Contest May 10-11th, as BV0THU along with members of the University
Hsin-Chu. QSL via DL5AUJ.

C6, CROOKED ISLANDS (Bahamas). Look for C6AJR to be active May 30th
to June 2nd. The Crooked Island has an IOTA of NA-113 and is located
in the South Bahamas Group. Operations will be on 80-6 meters. QSL via
Joe Pater, WB8GEX, 1894 Old Oxford Rd., Hamilton, OH 45013 U.S.A.

HB0, LIECHTENSTEIN. The "DX News Letter" reports that DJ9SI, DJ8KI and
DL8SET will be active from Triesenberg on 80-2 meters from May 7-11th.
QSL via DL8SET.

HZ1AB GOLDEN ANNIVERSARY CELEBRATION. The HZ1AB license was issued in
late 1946, and to commemorate 50 years of being on the air providing HZ
QSOs and QSLs, the the present and former members of this historic DX
club station announce a Golden Anniversary celebration for HZ1AB. The
present HZ1AB members at Dhahran, Saudi Arabia, will be active in all
major international and regional contests during the period May 1997
through April, 1998.
A special QSL card will be designed and provided for contacts during
this period. Review future issues of ham radio publications and DX
bulletins for exact details. It is likely that all contest QSOs will
be QSLed via the bureaus, with other contacts being via the normal SASE
via K8PYD, the HZ1AB QSL manager. For more updates, check the web site:
http://www.netcom.com/~k7jj/hz1ab.html

IOTA NEWS. A short DXpedition to Matthew Island (IOTA OC-218) will take
place this week. Operators will be Eric/FK8GM, Robert/FK8AH and Claude/
FK1RF. They will use the callsign FK5M (same as the December, 1996
activity). The QSL will be via F6AJA. They are landing by helicopter
on Tuesday, April 22nd around 2200z and depart Wednesday, April 23rd

around 2000z. Activity will be on SSB and CW on the IOTA frequency.

J8, ST. VINCENT. After his activity in 8R-land Yuki, JH1NBN, will be active as J83ZB from April 29th to May 4th. Activity will also be on CW, SSB and RTTY with operations on 14-10 meters. QSL via JH1NBN.

KH0, MARIANA ISLANDS. The "Island/DX News" reports KH0SI is active from Saipan, often between 1000 and 1200z on 14175 kHz.

OD, LEBANON. The "Daily DX" reports Gaby, OD5NJ, has been active on the lower bands. Check 3800 kHz between 0130 and 0300z and then afterwards check 160 meters fir Gaby.

PACIFIC DXPEDITION. Tada, JA1WPX, will once again be active from the Pacific. Look for him to be active from the Marshall Islands, April 25-26th as V73WP. Then from April 27th to May 5th, he will be active from Western Kiribati as T30WP. He will return to the Marshall Islands May 5-6th. Operations will be on 160-10 meters and the WARC bands. Activity will be on SSB/CW using a TS-50 and a small AMP (300W). QSL via JA1WPX direct to CBA or JARL bureau.

QSL INFO AND NEWS..... It was reported by Peter ON6TT/5X1T, that all printed QSL cards for VK0IR, TO0R and TO0R/MM arrived safely at W4FRU's QTH earlier this past week.

SPECIAL EVENT STATION. This year's 2nd IARU High Speed Telegraphy Championship will take place in Sofia, Bulgaria, from October 6-10th. The special event station, LZ0HST, will be active from now until October 30th. QSL via the Bureau or direct: P.O.Box 830, Sofia-1000, Bulgaria.

ST, SUDAN. Sayed, ST2SA, has been active. Best times to work him is on Saturdays and Sundays between 2000 and 2400z on 20 meters. He does have an antenna for 10, 12, 15, 17 and 20 meters. QSL via the CBA.

SV5, DODECANESE. A group of Hungarians will be active from the Island of Rhodes from June 3-17th. Operators will be Laci/HA0HW, Tomi/HA4GDO, Laci/HA6NL, Zsolt/HA6PS and Tibi/HA6ZV. They will use their home calls with a SV5/ prefixes and /p behind the calls. The team will work on all HF bands from 160-10 meters on CW, SSB and RTTY. Suggested frequencies are:
CW - 1831, 3511, 7011, 10101, 14011, 18071, 21011, 24891 and 28011
SSB - 1841, 3789 (3611 for HAs), 7089, 14189 (14260), 18141, 24941 and 28489
They also want to be active on the satellites such as RS-10, RS-12 and RS-15. Their down link will be 29421/29441 and 29321/29341 kHz. Two stations will be active.

SWODXA DX DINNER BANQUET UPDATE. Bob, W9UI, President of SWODXA, reports the program for this year's SWODXA DX Dinner (Friday of Hamvention weekend) is VK0IR. Also, they are on the schedule for Saturday's SWODXA sponsored DX Forum at Hara Arena. Normally, if they are scheduled for both events, groups show something different at the DX Forum from what is presented at the DX Dinner.

T33, BANABA ISLAND. Ron, ZL1AMO, is currently active as 3D2RW from
Fiji and plans to go to Tawara some time this week. If he can find
passage on a fishing boat, he will be on Banaba the following week. Ron
likes to work mainly on CW and can be usually found on the lower bands
and also the WARC bands.

YI, IRAQ. Sanyi, HA7VK (ex. XU7VK), will be active as YI9VK starting
May 12th. He will be there for a couple of months and will be operational
on the HF bands with 500 watts on CW, SSB and RTTY. QSL via HA0HW. He
will later be joined (if possible) by Laci, HA0HW, signing YI9HW during
the second part of July. QSL via CBA.

I have a '96 4runner with an Alinco DR605T installed. I have never heard
any ignition noise on the recieve, and have never had reports of noise on
transmit. There are no filters installed either. This is just one case
though.

Tim -- you have described your question quite well and is a fair one
to ask. The answer is that GROUND MEANS GROUND -- and that is THE
EARTH. If you were to use the 55 gal durm you mentioned there would
be several hundred if not thousand ohms between your "ground rod" in
the drum and the real earth.

Sorry you can't use this approch - it would be much easier - wouldn't?

In a message dated 97-04-20 07:57:22 EDT, you write:

<< Maximum power for amateur radio is 400
watts. >>

In Australia Yes. In the USA No

<<If nothing else works the Korins should make life so hard that their
neighbours will move away. Councils have the power to create and enforce
tower rules.>>

1.) The properly licensed amateur was there first.

2,) From what I understand the location is outside that of a local council.

<<The FCC should lower the maximun power permitted to hams to 100 watts.

For what purpose ?.

<<What is the big deal about talking to some clown in another country.
<<The way some hams go on about it you wonder why they don't get a life.

Whats your hobby, you obviously know nothing about Amateur Radio ?
I would suggest you do your homework before making such comments

Cross-posted to:
rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.info,rec.radio.amateur.swap

I purchased a Yaesu FT-416 2M handi at a hamfest yesterday. This is either the A1 or B2 version, (I don't know how to find out), with a TX/RX of 144-148Mhz.

What I would like to do is mod the radio to RX from 130-174. (match the A2 version) I know this is possible, but don't know how.

One note: I DON'T want to TX out of band, just RX. However, I am sure that any mods will affect both.

If anyone can help me, please contact me.

I am VERY unfamiliar with the newsgroups and how they operate; so it might be better if any responses are directed to mstaff@enhcom.com

Thanks to all, and 73!

You quite in error regarding the grandfather clauses,
in my city a few years ago a commercial site
(30 repeaters) was dismantled when the zoning laws changed.
Yes, it was appealed and they lost.

Hi Cec - I'm reading your remark on r.r.a.boatanchors, and as I recall,
the charter for .boatanchors does allow for BA ads.

I wonder who the goofball was (M.A. maybe?) who originally included so
so many newsgroups? Neither .misc nor .homebrew have a problems with
lots of ads - only .equipment does, so followups should be directed
just to that group.

think the primary diff is that some w5yi, not all, allow multiple
choice questions for the test. I not sure if the ARRL does not allow
it, but I have yet to find a ARRL test session that does it. Multiple
choice s becoming practically non-exsistent anyway.

Multiply the decimal part by 60: that will give you the minutes.
Multiply THAT decimal part by 60: that will give you the seconds.

Sorry but I confess that I disobeyed your command to find out about
PICON. Maybe you will tell me whether it is a special Civil Service
dictionary which confuses a necessity a need.

(Hint: A necessity is something which satisfies a need.)

>Why not just re-boot in the DOS mode and run a DOS morse program?

Because its not feasible, with all the other things a Windows PC can be doing, why would someone want to close down Windows, specially Windows95 just to run a lame Morse tutor. As is, MorseAcademy runs fairly well in Windows 95, but it could certianly be a bit better if it was a native app not to mention all the other features a Windows program could have... like screen saver tutors, background tutoring while you work, etc...

Lets all move a giant step forward, or amateur radio goes nowhere.

My son and I are both ham operators. He and his wife and sons
sailed from Florida, thru the Panama Canal, and across the Pacific.
I "worked" him across the ocean on 20 meters. On more than one occasion,
when weather was bad or propogation poor, we reverted to CW to keep
in touch. It was a lifesaver, knowing they were well. Hurray for
CW!

Nothing. S97.313(b) give us that privilege. But (a) instructs us to use
only as much power as necessary to carry out a desired communication.
Next time you listen to one of the NCDXF 20m beacons note what little
difference in readablilty there is between the 100W and 10W levels.

Visit the nocode web site and then tell us that we are just whiners.
Every article posted there is by a general or above. We are working
towards change...AND that includes the constant responce to the
tired old bull that pro-coders keep putting forth...such as that all
we are a whiners who should just do it.

>Incidentally my code speed is still about 15wpm today. I don't think
>much of the code, slthough I do use it,

You readily admit you don't think uch of the code yet you refuse
to see it ended as a mandatory, separate test elemnt. Amazing.

>but I'm not going to sit around,
>and waste my time bitching about the piece of HF I'm not allowed to use.
>If I want it I'll work on my code and pass 20 WPM. But it's my choice.

So have almost all of us that are in the forfront of the argument on
the nocode test side.

>Here's one for you... the only valid argument you or anybody else I've
>heard so far is that you can fail by failing the code element while
>it only takes 70% for all the rest... lets make
>code, PACTOR, AMTOR, Fast Scan, SLO Scan, Packet, SS, Microwave, high

Boy, is that a load of horse poop.

In preparation for our hurricane season (1 June to 30 November) we
just had a message handling workshop. Part of the practice was passing
formal voice messages. To do that effectively you have to speak at
writing speed. Using code would have gotten the messages passed
much quicker, with a much more accurately received hard-copy.

YOu won't hear any flames from me, Ed, as I agree with what you've said.
I've been looking at the ec manual and have been lurking around the edges
of the hobby for many years before I was licensed.
I don't think we have enough questions on the exams about procedures. I
hear more bad operating practice than I care to, and it's not just among
folks with no-code tickets.
Part of the reason we exist is emergency preparedness, and that means
communicating effectively. A lot of the buffoons I hear on my local
machine don't communicate effectively. I don't think they know how.
Our county Ares group doesn't do drills or regular nets, and it's too bad,
because I hear everything from Q signals on voice to ten codes. These are
definite no-nos when it comes to emergency comms.
In fact, our local EC is one of the worst offenders. I don't care how much
theory you cram, or how fast you can copy cw, but I do care that you can
communicate effectively if you're handling an emergency situation.
Before anybody chooses to flame me when they see my call sign in my sig,
I've handled nts traffic, and know the format. I can also help someone
with the appropriate license class get a station on the air in the field
quickly, as I learned the theory, not just memorized the answers <grin>.
It's a great hobby and deserves to exist long into the future, but operator
training has to be upgraded if we intend to keep it.

Good evening Cliff. If I am not mistaken, the legislation applies to
privately owned (IE: personal towers) and not towers used in commercial
or for commercial applications. This would be more in line with Barry's
and Burt's postings concerning legislation to make amateur operator
towers illegal or fall under restrictive rules.

There are a number of cases where towns have passed legislation limiting
the height of a tower to 35'. In each case, existing towers where
grandfathered, despite having heights ion average of 60-80'.

Commercial towers fall under a different set of circumstances.

Not true, with the advent of SAME/EAS, it is likely that in 2 years time
the NWS may be MANDATED to move to a dual tone alert tone. They have been
permitted to remain with the 1050hz tone for old equipment for now, and
whether they will be forced to change depends on the market.

We manufacture EAS/SAME equipment for amateur radio use.

I've heard hams who actually do this. You're right, they're idiots.
The scary thing is that one of the worst offenders was a retired Air
Force Lt. Col. who used to be a fighter pilot in Korea. It's no
wonder we lost that war.

HI HI. Not.

> that permitted for amateur radio? Maximum power for amateur radio is 400
> watts.

Maybe where *you* live ... but here in the US, the maximum power limit
is 1500W PEP output ...

Now that limit is over-used and abused by large numbers of hams who
clearly *always* run the "footwarmer" despite rules that require the use
of the minimum power necessary to carry out the desired communications
... for some of these lids, if the report isn't "60 (dB) over" (S-9) they
figure
something's wrong and try to retune to get more "margin" ... they're the
"pileup-busters" ... the ones for whom ham radio is simply an exercise in
electronic machismo, where they get their jollies by demonstrating that
"theirs is bigger than yours" by stomping any and all comers into the dust
with their excessive signals ...

This mentality of "brute force dominance" is not a healthy mentality, but
it's
all too common ... it also demonstrates the technical ignorance of its
adherents who are simply too technically backward and ill-informed to even
begin to grasp the undeniable reality that they could get FAR better

system
performance in terms of "getting the message through" by simply using
better
modulation and coding techniques than by adding humongous PAs.
And it would be FAR cheaper in monetary costs, too ... with hams being the
notorious cheapskates that they are, I'm really surprised that this aspect
of
newer, better technololgy alone doesn't attract more converts from the
backward, Luddite side ... if we could only find a way to get through to
them
and make them realize the technical realities, but since they fear that
which
they don't understand, it's inherently difficult to persuade them to even
listen
with a half-way open mind to any idea involving anything more modern than
the aural decoding of beeping patterns ...

There have *always* been some low grade amateurs entering the
hobby ... witness the I_can_beep_fast lids on 80m and 20m.
Witness the "extras" who don't understand Ohm's Law or how to
cut a dipole to resonance or any of a number of other totally
trivial technical things ...

As Rich points out, the ads here are a violation of the non-*.swap
group charters.

I suppose that those who want the ads here could file the needed
actions to get the charter changed, but I doubt that will ever
happen... If they are too complacent to post in the appropriate
groups, it is doubtful that they will bother with the paperwork.

Just did a little checking of a number of the inappropriate WTB and
For Sale ads being posted...

Most are being cross-posted to rec.radio.swap and/or
rec.radio.amateur.swap as well as spamming them to the wrong groups.

Seems that the idea of the *.swap groups not being on someone's server
just don't hold water.

I'm fairly ambivalent concerning the whole code debate. That is,
I have my opinions, but I'm not gonna contribute to the chaos
that's taking place. However, if that last statement is indicative
of the logic that no-coders use, then I suspect that it will be
a longlonglong time before code is done away with...

Bizarre. Please - no more strange twists of logic! Our brains
might fry (and not from RF radiation either! :).

This is actually a good thing.

First semantics, in a physics sense there is no such thing as a "gain
antenna" the best an antenna can do for you is to reshape the pattern
putting more of the energy radiated into a smaller cone.

A very high "gain" antenna directs most of the radiated energy towards
the intended receiver lessening the chance for inadvertant
interference. The long and the short of it is this order is to the hams
benefit. We will also benefit from the research and engineering that go
into these systems.

Selling my HTX-212. It is back in the box and is complete. I bought it and didn't use it enough. It is a great Ham that every one has been talking about. If youdo not know exactly what this is I will send you a detailed list.

$200.00 US + shipping.

GSutton@aol.com

1386. Morse code used by ship in destress recently

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-20 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE8xA50.3tF@netcom.com>
Source record: 200001

The following post was included in this week's Maritime News
on misc.transport.marine.

As a little background:

The US Coastguard discontinued Morse watchkeeping on Aug. 1, 1993
The Morse Distress Watch will be discontinued on a worldwide basis
on December 31 this year. This has been in use since 1912.

---
misc.transport.marine

Russian-registry ship uses Morse Code after becoming disabled
off the Netherlands

The Vera (Russian-registry 1,750-dwt dry cargo ship) was disabled
recently when a bridge window broke during bad weather.
Water that entered through the hole shut down electrical equipment
on the bridge, and the ship drifted towards Terschelling Island,
the Netherlands. The only communication equipment working
was a 500 KHz broadcasting unit, which the crew used to send
a CW (Morse Code) distress signal. A station in Ostend,
Belgium, received the signal and the ship was assisted by tugs.

Sure is surprising that after CW Morse has become
obsolete, it still pops up a couple of times per year;
still saving lives and property from danger, loss,
and distress at sea.

They might if they at least understood that their lifes might depend on hams
the next hurricane of earthquake.
Just suppose all this stuff was happening in FL or CA. I guess that the next
hurricane 'Andrew' might look a bit different without the so much needed ham
equipment and experienced communicators.

That alone is moore than enough reason to take hams into account.
How much more expensive would electronics become anyway...

>We NEED the sympathy of the majority of citizens by and large to keep
>the hobby going. I think that is the point being made here.

That's right. Most people don't even know we exist. I meet lots of people in
my job (interior decorating) and during lunch I always talk to stations with
my HH. This is enough to get a few questions about our hobby and most people
find the possibilities of ham radio facinating.
Good PR never hurt anyone.

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

>John (KC5VEI)

When I was first licenced I put up a 10m (33ft) tower with a dualband colinear and used 15 watts FM on 2 meter. One year later I upgraded my licence and was allowed packet. Then the trouble started. A neighbour living about 70 meter (70 yards) away came to complain about interference to his TV (ALL CHANNELS!!) and his phone (all numbers....).
I talked to him for a while and told him I would decrease power and if he would come back and tell me if it made a difference. I switched to 4 - 5 watts and when he came back he said there was no change in the interference.
He then said that his he was not hooked up to cable (all others in my neighbourhood are hooked up) and he had his antenna in the attic with a broadbanded receive amp. He was not willing to change anything to that setup.
I told him that I would switch back to 15 W and that in fact we were allowed 150 W so that in future he might experience more interference, but that he was allways welcome to complain to the authorities (our local FCC) and that they would come and check my equipment (all approved) and that they would then come over to his place and check HIS TV/phone.
I never heard from him again... seemes that he didn't pay a licence to watch TV (We are taxed for everything but breathing here in Belgium). That's why he had no cableTV (crosscheck TVlicence / cable subs).

I guess he now has no more problems since he doesn't even complain when I'm on HF (150W) or packet (25 W, antenna 19 m AGL).

Most RFI problems are because of lack of shielding in the receiving equipment... It's time there is a type approval for consumer electronics with standards as high as for hamtranceivers... that will cure a lot of problems .

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

>
>If you're interested in research you don't need a license. Just find a
>ham nearby to assist you with on-the-air testing. (I suspect very few
>researchers at Icom, Kenwood, Yaesu, MFJ, et al, are licensed hams.)

And as usual, you'd be wrong. The RF design field is very small,
particularly the HF part of it. And it isn't a highly profitable
field to enter. Many who work in the field come to it through
their love of amateur radio. Most of those to whom it is just a
job quickly move on to more profitable endeavors.

In this field, if you stay, you're either a back marker who can't do
better for yourself, a cut and paste hack content to use the same
stale old designs year after year, or you love it so much you willingly
sacrifice career advancement and better pay to stay in it. Most of the
latter are hams. It wouldn't be very satisfying at all to such a person
to design something new and not be permitted to actually use it as it
was intended to be used. That's the real pay off.

If you look at the companies providing amateur equipment, in the
past and today, you find a ham or hams behind the products. You
really should get to Dayton some time and talk to these people.
I've met a lot of them over the years, from Art Collins to several
of the men who design today's Icom, Kenwood, and Yaesu radios.
Of course they get paid for what they do, but most of them could
earn more designing other things.

For a private person without a commercial contract, the *only* pay
one gets for designing something new for amateur radio is often
the thrill of actually using it on the air, and the satisfaction
of knowing it works just as you've predicted it would. Lots of new
amateur stuff gets its start that way, from someone who can't leave
electronics at the office, but who must do it at home in his spare
time too. Amateur packet started that way. The basis of the TNCs
sold by MFJ and PacComm came from people working at home, after
hours, because they just couldn't stop the ideas from coming.
The same for the amateur satellite builders.

Of course you can't understand that. You're so mired in the past
that you've never felt the feeling of bringing something new into
the world. It might not be much, just a particularly clever hack,
or a subtly more elegant circuit, but it is yours, something no
one else has done exactly that way before. The first time it works
is a rush that has to be experienced to be understood. But you'd
deny that rush to those who don't beep Morse.

A lady at a cocktail party once asked Issac Asimov, "How can you
think of all those crazy ideas?" He answered, "How can you not?"
To a good designer, the ideas just won't stop coming. He's driven
to build and test them. If he can't do that in amateur radio, he'll
do it somewhere else. People who would have created new things in
amateur radio now turn instead to other cutting edge fields where
there aren't artificial and irrelevant barriers thrown in their paths,
and where the watchword isn't "That's not the way great grandpappy
did it."

Thankfully, a few do hang on in amateur radio, but think how much
more we could be doing if we weren't actively trying to discourage
these people. The best pay of all is when someone says, "Neat, how
does it work?" That's heard all too infrequently today among amateurs.

>>What's more important - SQL SERVER, Pascal, MS C++, RITTY or CW???
>
>To whom? Out of the above list, CW is the most important item to me.

Figures.

>>What "filter" do we need? Can I learn 20 wpm of CW and be an as*ho*e on
>>HF like some of the others, or be able to experiment? Or do I "have to
>>pay my dues" to a 19th century communications standard?
>
>You might note that those behaving as a**holes are using a 20th
>century communications mode called SSB, not CW.

You're so smug. But you still haven't explained the strings of dits
and swishing carriers that your oh so pure CW operators use to attempt
to interfere with machine text mode transmissions. Or those who send
FU FU FU in Morse (very fast) over ongoing QSOs. It is a daily occurance,
but they must really be SSB operators in disguise, eh Jeff? They just
couldn't be Morse tested CW operating assholes now could they?

Yeah they could. SSB doesn't have an exclusive on this sort of
behavior. You find them operating every mode, including OOK Morse.
And if you fingerprint their transmitters, you can often find them
later signing their calls in a QSO down at the very bottom of the
band. Morse tested, Extra Class, CW operating, *assholes*.

I'd like to send a HARM missile chasing down the carrier of one
in particular who lives down in Florida. He delights in trying to
disrupt digital QSOs, then going down to the bottom of the band
and bragging about it to his CW cronies. He's one reason I'd like
to be able to use SS on HF. That would frustrate the hell out of

him, if he knew there was a SS QSO going on and he couldn't even
find it to try to jam it.

He's a lot like you, Jeff. Eavesdropping on his conversations
with his cronies (machine decoded), I've learned he's ex-merchant
marine, and hates everything newer and better than Morse. He's
also apparently ignorant as a post about newer technologies
because he thinks he's broken up a lot of digital QSOs. But
all he's really done is slow them down. The machines just
patiently keep trying until they get the message through.
He and you probably have a common ancestor in Ned Lud.

SAREX/ARISS WORKING GROUP ATTEMPTING TO RESCHEDULE QSOS

When the space shuttle Columbia prematurely came back to Earth on Tuesday, April 8, so did the soaring hopes of students and teachers at 18 schools that had been scheduled to talk via Amateur Radio with the astronauts aboard the shuttle as part of the Shuttle Amateur Radio EXperiment, or SAREX. NASA decided to bring the Columbia back early after one of the spacecraft's three fuel cells malfunctioned and had to be shut down early in the STS-83 mission. The flight began a day late on Friday, April 4, and had been scheduled to last 16 days. Although the shuttle can function on one fuel cell, NASA flight rules specify that the shuttle must have three operational fuel cells. However amateurs made a valiant effort to get NASA to break the flight rules. The hams figured the chances of a death were small whereas thousands of hams were looking for a beloved QSL card.

The astronauts were able to complete only a fraction of their scientific experiments during the curtailed flight but the ARRL pressured NASA to curtail even those experiments in favor of more time with SAREX. Three hams were aboard STS-83: Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTJ; and Donald Thomas, KC5FVF. The SAREX schedule had included contacts with schools in the Communist Red and Okinawa, Japan.

It's not yet known if or when any of the SAREX contacts might be rescheduled on other missions, although the ARRL has indicated if SAREX is not quicly rescheduled the ARRL will seek to reduce NASA funding. After hearing that NASA has indicated it would like to "refly" the entire STS-83 mission--with the same crew--at a later date, possibly as early as July. The SAREX/ARISS Working Group (SAWG) has requested that SAREX be included if the mission is reflown. In the meantime, the SAWG will be in contact with NASA to find ways to give each school every possible chance to be assigned to future flights.

To help assuage some of the disappointment, NASA Payload Specialist Ron Parise, WA4SIR, took time out from his work schedule Monday at Goddard

Space
Flight Center to speak with some 300 thrilled students at the County College
of Morris in New Jersey, one of the schools on the STS-83 SAREX schedule. Other schools might get a chance at special QSOs with the STS-83 crew members via ham radio (W5RRR) once the crew is back at Johnson Space Center.
NASA is very sensitive to the power of the ARRL but there is rumor that NASA has had enough with this lobbying and may seek to have some ham frequencies reassigned.

At least one of the hams aboard STS-83 managed a few spare moments to turn on the ham gear aboard the shuttle. Al Lark, KD4SFF, of Greenville, South Carolina, was able to chat with Don Thomas, KC5FVF, aboard Columbia on Saturday, April 5. "I told him that I was the one that sent him the talking
Woody QSL on his last mission. He said he remembered! It was great to speak
with a fellow Cleveland boy in space!!" Lark said. Rusty Hack, NM1K, in Enfield, Connecticut, also reported hearing KC5FVF aboard the shuttle on the
same day, apparently a few minutes after the QSO with KD4SFF. April 5 QSOs also were reported by KA3HPQ and N1JEZ during the same pass.

In the meantime, four out of a scheduled round of ten MIREX school contacts
have taken place so far with ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station. At least three more school contacts remain on
the schedule--Alaiedon Elementary School in Mason, Michigan, Holy Angels School in Dayton, Ohio, and Jerling Junior High School in Orland Park, Illinois. The remaining QSO schedule may be pared back in deference to Linenger's heavy research workload, but efforts are under way to carry out as many of the previously schedule school contacts as possible under the threat of the ARRL seeking to reduce NASA funding.

Problem is that the FS and WTB ads in the r.r.s group are SO NUMEROUS!

A few specialized ads in boatanchors for example, are VERY welcome by
the majority of readers.

We do not want to wade through 150 ads for dual band VHF/UHF whatsits
and packet terminals trying to find a DX-100!

Why not take this thread to r.r.a.policy?

>
> Surely the FCC could charge the operator for using a power grossly over
> that permitted for amateur radio? Maximum power for amateur radio is 400
> watts.
>

Per FCC Part 97.313 subsection B No station may transmit with a
transmitter power exceeding 1.5kW PEP.

Maybe in AU they're allowed 400 watts, but in the US, we're allowed up to
1500.

Besides, the contention by the "hurt" party was the operator had the
ABILITY to use 1500 watts, not that 1500 watts were used. As stated
before, just because a car can do 100 mph does not mean that the operator
will ever drive that fast. Should the driver be ticketed for excessive
speed under the premise that he may do so?? Maybe in AU they do, but not
here

I suggest you research a little harder before making brash erroneous
generalization

Roland,

There is a well known story as to how H.M. King Hussein became JY1. He issued a royal decree proclaiming himself such. Also proclaiming other members of the royal family to be hams as well.

It goes back many, many years when King Husseim invited 73 Magazine publisher Wayne Green to come to Jordan and introduce ham radio to that nation. Green claims to have written the Jordanian ham regs (and as readers of his editorials know -- he never lets anyone forget it) and was with the King when the proclaimation decreeing the creation of the Jordanian Amateur Radio Service was issued. He has both pictures and tape of that.

Does the call conform to ITU regs? Maybe yes, maybe no. But even if it did not, I do not know anyone who is going to tell King Hussein to change his call sign.

For more information, contact Green directly with e-mail to design73@aol.com

The W5YI test is easier and more sensible.

Tests I took there were all farnsworth and they allowed
used of laptop to copy code.

The ARRL test was a pain.

Tests I took at ARRL may or may not be farnsworth and they
never allow use of a laptop to copy code.

Needless to say, I always go to W5YI if I have a choice.

Guess this post didn't get the ham's all sign...or was this just
another non-ham example. The above offers NO reason to
mandate hams know morse code. Nothing about the above
involved hams or even may have needed a ham with morse.
The 500 KHz emergency cw monitoring is going away and
the day will come when no one is listening on 500 KHz anyway.

Sorry Barry, maybe that's the case in AU, BUT....
Councils (i.e. the local governments) can NOT in the USA
make the existing tower illegal. The US zoning ordinances
operate under a pricipal of "grandfathering" any struture
or non-conforming use if a new law is passed which would
otherwise make it (i.e. the tower) illegal.

Additionally, the federal (US) government (FCC) has passed
PRB-1 which preempts any local councils from passing
outright bans on all towers. Typically, that would generally
cause almost any council to have to accept a tower at
least 35 feet tall and upwards of 50-60 feet.

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1027 for release on Friday April 18, 1997 to follow.

(*****

The following is a QST

Ham radio operators continue to provide assistance as raging rivers crest in the upper mid west. Also, a ham satellite is lost in orbit and a repeater gets an operating curfew in the UK. These stories and more on Newsline report number 1027 coming your way right now.

(*****

UPPER MIDWEST FLOODS

Guided in many cases by ham radio operators, rescue workers in the upper mid-west used helicopters and other all-terrain vehicles to carry thousands

of people from flooded homes. This, as rivers swollen by rain and melting snow devastated parts of Minnesota and North Dakota.

In the city of Fargo, volunteers including students worked around the clock to prevent the Red River from inundating the city. Ham radio operators, working with rescue operations kept track of the rising waters. Dale Cary, WD0AKO is Newslines Webmaster right across the river in Moorhead, Minnesota:

"This past week the hams have been stationed at the volunteer center, which has been the Civic Center downtown, also at the Red Cross offices, and the office of the Salvation Army.

They have been dispatched out to different areas around the F-M area, and checking with the different areas in the community to see how things have been going with constructing the dikes, if they needed more supplies, more manpower. And all the information has been relayed back to the volunteer center." WD0AKO

According to reports from the ARRL, a statewide Minnesota ARES High Frequency net was activated to assist the Salvation Army in the Minneapolis - St. Paul area. The Salvation Army is bringing in relief supplies for the Granite Falls area.

Hams are also providing communications to local Salvation Army chapters coordinating delivery of relief supplies to affected areas. Other amateurs are still busy reporting new flooding areas to the National Weather Service.

An informal ARES High Frequency flood net is being activated each evening at 5 PM Central Time on 3990 kHz. It's still on the air as this newscast is prepared.

A measure of relief was felt when the river's projected crest was lowered because of a previous reading of a stuck gauge.

(*****

NO COMMUNICATIONS EMERGENCY

If you are planning to travel to Minnesota to offer assistance in providing flood relief ham radio communications, please don't come unless you are specifically invited state emergency officials. This, according to Minnesota ARRL Section Emergency Coordinator Gary Peterson, N0ZOD. Gary says that operators from other states are not needed at this time.

According to his posting on the ARRL Section Emergency Communications internet remailer, somebody has put out a nationwide call for radio operators to report to Minnesota for flood relief communications. The problem is that this request was not cleared through or coordinated with state level emergency management and other operators from out of state are just not needed at this time.

Peterson adds that hams in Minnesota appreciate your willingness to serve, but right now there is no need for outside communications help.

Peterson adds that if you received a call up to come to Minnesota, please e-mail back to him an acknowledge this recall.

Also, if you can pinpoint the who started this unnecessary out of state call up, please let him know the source. Gary Peterson's e-mail address is:

n0zod@deskmedia.com

FCC DATABASE TEST

For a limited time, hams and others will have real-time access to the FCC's amateur database under a beta-testing program. The Wireless Telecommunications Bureau has made the three databases available to the public at no charge for approximately 30 days.

Among the information available is the amateur application. It allows real-time query capability of the Commissions ham radio database.

The other programs include a frequency search program for 929 and 931 MHZ and the database transaction downloads. The three applications will be available until May the 12th at:

http://gullfoss.fcc.gov/beta.htm

MEXICO-OSCAR 30

The recently launched Mexico Oscar 30 ham radio satellite is now officially dead. This according to project managers who now say that the bird has apparently been lost for good due to a catastrophic on-board failure.

The satellite did make it to orbit and transmitted telemetry for about one day. It appears as if a crystal oscillator in the uplink receiver's first local oscillator never started oscillating. In other words, the satellite was totally deaf. Because it could not hear the commands on the uplink, battery charging parameters suitable for the unanticipated cold temperatures could not be loaded, and the satellite ran out of power. Later attempts to revive it were unsuccessful.

The satellite was built at the Autonomous University of Mexico in Mexico City by Professor David Liberman, XE1TU, and his students.

(*****

RS-16

Better news for the newest Amateur Radio satellite. RS-16 should be ready for general use in about two months. This, according to Russian space enthusiast Leonid Labutin, UA3CR, who says that this latest ham radio satellite is undergoing final testing right now. Once tests are complete it's expected that the Mode A transponder will be switched on.

RS-16 was launched as part of a compound satellite package called Zeya. In addition to the RS-16 package, the Zeya spacecraft is made up of an experimental navigation system, a number of experimental reflectors, solar panels and batteries.

"ROCKOON" LAUNCH FOILED BY RFI

An RFI problem has led to scrubbing the planned North Carolina launch from a balloon of an amateur rocket carrying amateur fast scan television and APRS systems.

The project is known as Rockoon. That's an acronym for a combined rocket and balloon. According to Bill Brown WB8ELK, at three minutes before the scheduled March 22nd liftoff, three loud pops were heard from the rocket gondola. It turned out that RFI in the gondola caused automatic descend system to fire prematurely.

Rockoon is a project of the Huntsville, Alabama L 5 Society and is made up of hams and space enthusiasts. That group spent the past two years developing and testing components for the rocket balloon flight. No new date has been set to try again, but one will be announced as soon as the RFI problem has been solved.

NJ HAM WINS RFI CASE

A major court win for a New Jersey radio amateur. A Superior court judge has ruled that FCC regulations prevent him from declaring that interference allegedly caused by ham operator Walter Kornienko, K2WK, Lafayette, New Jersey constitutes a public nuisance.

According to the April 16th edition of the Star-Ledger newspaper, Leopold and Karen Korins sued Kornienko last year. They claimed that Kornienko's transmissions from his 1,500 watt ham radio station were bleeding into their telephone lines, blocked television reception and even activated their electric garage door opener. Attorney Kevin Kelly, representing the Korins, asked Judge Reginald Stanton in Morristown to declare the situation a nuisance and direct Kornienko to cut back on his hobby.

But Kornienko's lawyer, Richard Clark, claimed his client had a right to operate under a federal license. He maintained that it was the Korins responsibility to shield their home from unwanted radio signals and that the New Jersey court had no jurisdiction in the case.

And Judge Stanton agreed. He told the Korins that neither he nor any state court had jurisdiction in this matter. He said that it is the FCC that controls everything to do with the operation of an amateur radio station under very extensive and broad laws. He added that federal government policy is aimed at encouraging the use of short wave radio for public safety and information purposes in times of disaster and to promote international goodwill.

UK BUST

An unidentified former United Kingdom ham says that he is guilty of violating that nations radio law. According to the Radio Society of Great Britain the individual who was a licensed radio amateur at the time, has plead guilty to a charge that in December of 1994 he improperly used an apparatus for wireless telegraphy.

On February 21st he was sentenced by the Worcester Crown Court to serve 70 hours community service and ordered to pay the British equivalent of court costs and attorney fees. Also, his transmitter, antenna and some tapes were ordered confiscated and forfeited to the government communications regulatory agency.

UK REPEATER CURFEW

Still in the UK, word that a curfew is in place on the West London, GB3WL two meter repeater. This, due to ongoing jamming and other malicious interference.

Under the terms of curfew operation the repeater is now available only between 06:00 and 19:00 hours local London time. This allows its regular mobile users to continue to use it during the working day, while denying those who abuse the repeater the opportunity to do so during the evening. GB3WL which operates on European repeater channel pair R1.

ON AIR CODE DEBATE

The April 27th edition of Len Winklers' Ham Radio and More radio program will be a preview of Len's Ham Radio Open Town Meeting forum slated for the Dayton Hamvention on May 17th. On April 27th, Len will have two of the

forum participants, Fred Maia, W5YI and Nancy Kott, WZ8C debating code versus no-code. They will also be taking calls from listeners.

Ham Radio and More airs live Sundays at 6:00 PM eastern time on many local commercial stations on WWCR Shortwave at 12.160 MHZ.

MACYS - NO MORE CONSUMER ELECTRONICS

Macy's is effectively out of the consumer electronics business. This with an announcement that the department store is going to drop the sale of television sets, videocassette recorders and stereo gear.

According to news stories. a spokesman for the department store chain says it's phasing out its electronics departments because they require too much of an investment of money and management time. The company says the extra space will be used to sell more men's and women's clothing and home furnishings.

Macy's says it expects the electronics departments to be gone within several months.

HAM RADIO BUSINESS DOWNTURN

Last week we told you about the severe downturn in the sale of higher profit desktop ham radio equipment in the United States. There are a number of industry observers who believe that it could lead to some Pacific Rim suppliers abandoning the U.S. market.

The question then arises if one were to pull away from North America what happens to it? The answer is that any who do will not just survive but may even do better than continuing to deal with marketing to United States hams.

There are two reasons for this. First is the huge market in Japan where no-code hams are permitted to operate SSB phone on the high frequency bands. In case you are not aware, Japan has more than six times the number times the number amateurs than has the United States. And, unlike hams in North America, most Japanese radio amateurs purchase the newest and latest desktop high frequency transceiver as soon as its available. They are also used to paying full price with no discounts.

Also there is the burgeoning South American and European markets. Again, discounting is unheard of and getting in line to be the first with a new model radio is very common.

And most of the same Pacific Rim manufacturers that bring you ham radio gear also sell high mark-up two way land mobile equipment. That market is exceedingly strong worldwide and offers profit margin that are generally quite high.

NEWSLINE SUPPORT FUND

We heard from Jack Titterington, W1EOF of Cranston, RI, repeater owner Dick Tyler, WA2EHL, of Burlington, NJ, the Western Area FM Amateur Repeater Club, WB9AET of Chicago, and the Milwaukee Repeater Club. The EARS of Evansville, Indiana took a collection at their November hamfest, and later subsidized it.

We also heard from the Huntington County Amateur Radio Society of Huntington, Indiana, Rick and Jo Haltermon, and the Ohio-Kentucky-Indiana Amateur Radio Society, both of Union, Kentucky. The Tyler Texas ARC, K5TYR checked in, as well as Ted Tsucalas, W0RMJ of Littleton, Colorado.

From California, we heard from the Amador County Amateur Radio Club of Pine Grove. And our sincere apologies to the Golden Empire Amateur Radio Society, who we seem to be steadfastly convinced are in Southern California, when in actual fact they're in Chico, definitely Northern California. We know where it is, we've been there.

Remember that clubs that support us with the club name, repeater call, and service area, get a mention during the newscast ID break.

DX

In DX, The Cuban VHF Group is making plans once again for participating in the ARRL's June VHF QSO Party. They would like to know if it is worthwhile to put in a special effort on the 1 1/4 meter band. The currently have doubts about 220 to 225 MHZ as in past contests they have

only worked five or six stations. If you will be active on 1 1/4 meters during the contest contact Jose Amador, CO2JA by e-mail to:

co2ja@co2bqq.ispjae.edu.cu

Also, those active on 2 meter moonbounce will be interested to hear that SM5DIC, is now active as 5X1D from Uganda on 144 MHZ. He uses 300 watts to a 17 element antenna and has already made a contact with W5UN.

Finally word that CY9AA DXpedition is a go for June 26th to July 3rd. Operation will be 160 through 10 meters SSB and CW, plus SSB on 2 meters near 114.200 for North America and 144.300 for Europeans. The group will also have an breakable QSK beacon on 50.101 MHZ and will take time to listen on for stations calling on the United Kingdoms 4 meter band as well.

(Via various DX sources)

HAMVENTION BUSSES

With many hams making final preparations to attend next months Dayton Hamvention, one of the questions many are asking concerns transportation to and from the convention site. In part three of his special report on Hamvention 97, RAIN's Hap Holly, KC9RP asks event General Chairman Dick Miller, N8CBU, about parking, busses and cabs:

"On our webpage and in our flyer, we are quite explicit about busses. There will not, I repeat will not, be busses to the individual hotels. It is just not economically feasible to do this. We figured last year, realistically we had about 1200, maybe 1500 people to 1700 people that actually used the busses for three days. And the cost was exorbitant.

But what we have done. We have expanded the remote parking areas. We have the usual ones, the Forest Museum, the Salem Mall, Forest Park, but we have expanded to U.D. Arena and Dayton Mall. I have no doubt that we will have them.

We are doing something this year that has never been done. At least since I have been involved in Hamvention. There will be at the arena a taxi stand with a starter, a lady or gentleman there who will be able to help people get cabs. They will be stationed right there like in an airport taxi stand. And it is the same company that the Dayton Airport has. Now the event, the thing with this is they have made arrangements to have a flat fare to the various motels. The furthest ones, of course cost a little more, the closer ones a little bit less. But that is for a cab full. If you can put five people in the cab. The cost is $10. The five people can split the $10." N8CBU

For more information please go to the Hamvention pages on the world wide web. The address is:

http://www.hamvention.org

BAY TO BREAKERS

And finally, if you are a ham planning a visit to San Francisco on Sunday, May 18th, you might want to consider volunteering your skill to provide communications to the 1997 Bay to Breakers race.

The Bay to Breakers Race is San Francisco's answer to other foot races like the New York City and Los Angeles Marathons.

This year, the American Red Cross Bay Area Chapter will be providing he medical support for the Bay to Breakers. They say there is a need for amateur operators to provide communications for the event.

The Red Cross is planing two types of assistance to the race. These are the Mobile Assistance Teams and the foot patrol teams.

Each race location and Mobile Assistance Team will have an amateur operator to provide logistics and dispatch service. While many hams have already signed up more are needed. If you wish to volunteer you have to do

so in advance. Please send your name, call sign, address, telephone number
and your e-mail address. E-mail this information to:

hjsundal@usa.redcross.org

You can also volunteer by sending the same information by U.S. mail to the:

ARCBA Bay to Breakers Race
85 Second Street
7th Floor
San Francisco, California
94105

(Via Bay Area Red Cross, KPIX)

cc: jefferyh@hawaii.edu at EXTERNAL
Subject: 1050HZ Warning Alarm Tone

Tom and Myron, a message was relayed to me concerning a comment by
someone in the in NWS in Hawaii that once EAS was fully operational and
NWR-SAME fully up and running that the NWS would discontinue the use of
the 1050Hz warning alarm tone. If indeed that comment was made or
someone in the NWS believes it, that is wrong. The 1050Hz Warning
Alarm Tone (WAT) will continue to be used probably forever.

There are millions of comsumer and industrial grade receivers in the
hands of the public and many institutions. They will continue to be
made and sold in very large quantities. I know for a fact that Radio
Shack, Maxon, and Midland plan to make and market these radios for the
foreseeable future.

Many models of Citizen's Band (CB) receivers on the market now have a WAT feature built into the unit. You can be monitoring any CB channel and if the WAT is detected on the weather radio channel you have set on the unit, the unit will activate a weak tone and switch the unit to the weather radio.

Hopefully you have seen the writeup I did on the reasoning for placement of the WAT in the coding sequence. If not, let me know and I'll forward a copy. In the SAME environment, the WAT will continue to have a function if for no other reason than as an attention signal to the listener.

Subject: Re[2]: 1050HZ Warning Alarm Tone

The transmitter operates in the narrow band of FM (25 KHz channels). Modulation in this band is confined to +/- 5 KHz of the primary frequency leaving a 7.5 KHz guard on either side of the max. deviations. The audio level from the program console is supposed to deviate the transmitter at a minimum of 4.25 to a max. of 5.0.

.....

>Ed Hare, W1RFI

I think there might be a dozen 50 KW clear channel stations in the entire country. And if you want to start working field gain and ERP into the equation, we can do that for ham stations as well.

By the way, does the expression 1 over R squared sound familiar?

Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am switching from a Yaesu FT890 to an Icom 706, for mobile DX. I have heard unfaltering things about the Icom external tuner, especially pricing.

I have also heard that the Kenwood AT-50 external tuner will work. For those who are using this set-up...

Any problems hooking the two up?

Any special cables or modifications needed?

What type of antenna are you tuning up. I will be running the Outbacker JR. I know there are better, but space and area traveled preclude them.

Any comments or suggestions are graciously accepted.

Thanks and c u on HF

I'm running a contest that gives away free logging software !

We have a winner for APRIL in the Log-It v5.0 Logging Software

giveaway ...

It is : Drayton - KF4AME Miami, Fla.

You could be the May winner by submitting your name.

The website has lots of other neat stuff too ! Like links,

shareware downloads, and more.

Try the CHAT SHACK while you are there. Get some friends together

and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

From: al evangelista <aevang@amspay.otnay.cris.com>
Message-ID: <335C4BE1.4A22@amspay.otnay.cris.com>
Source record: 199844

Hi Gang,

I am seeking to understand the world of 50 Mhz. It is my understanding that 6 meters will begin to support relatively long distance contacts (500 - 1000 miles??) over the summer months.

Is there a reasonably economical way to get into 6 meters? Any recommendations on basic 6M rigs? Is the most common mode FM or are other modes used SSB / CW / etc??

Does 6M generally support reliable contact between the midwest and east coast? If so what sort of power is typically required for a contact of this distance?

Any help would be greatly appreciated - direct email would be most appreciated.

>to copy at speed.

Maybe true in most cases, though I find I can copy at higher
speeds using random letter groups on my trainer than I can during a
real QSO. That's because in a QSO I either start to anticipate the words
or tend to read what I'm writing and it throws off my concentration
and I miss the next 4 or 5 characters (this is above 15 wpm).

On the other hand, using random text requires some sort of solid copy
requirement. Kinda tough to ask multiple-guess questions on that!

This seems a little bizarre to me. Why risk the lives of several
astronauts for the sake of getting a QSL card or making a contact?
After the Challenger disaster in 1986, NASA made many modifications to
shuttle equipment and operations to ensure safety. Circumventing these
new safety guidelines renders them useless. Perhaps the shuttle could
have functioned on 1 or 2 fuel cells; but with the cause of the problem
unknown, is it really safe to assume the other cells will not fail?
When human life is involved, I think its best to play it safe. People
get over their disappointment, they don't get over their death.

Looking for anyone who might be able to help me find a manual or information on an antenna my grandfather gave me.... The only thing it says is "avanti" on both ends. It has 3 vertical elements and the center one ends up in a big circle. It is in pieces at the moment and would like to know if I have all the parts and maybe get the thing back up in the air someday.

Thanks... E-Mail me at dakender@telepath.com

1434. CT and NA and DVP and LTA and contesting and W95

I've been contesting for a short while and like the idea of using a computer to handle the task of logging. I still work dups and don't mind working a station more than once. I also like the idea of using the computer to do the calling("CQ CONTEST CQ CONTEST KILO ECHO SIX WHISKEY ECHO OSCAR CONTEST" wears down the voice box real quick.)

I have an old copy of CVB(Creative Voice Blaster) but have since lost the docs. CVB is supposed to take the place of a DVP card.

ANy info you may have on using the above items with Windows 95 would be greatly appreciated.

I had a neighbor (actually several) that were just like this. When
my application for a special use permit came up for a public hearing,
everyone crawled out of the wood work. One particular neighbor
refused the help of several people to help resolve interference that
I was completely unaware I was causing. The basic comment was "It's
not my problem, why should I have to do anything." Another neighbor
wouldn't let me contact the manufacturer of her equipment as she
couldn't
be bothered to give me enough information to contact anyone. Clearly
solving the problem was much lower on the priority list than being
right.

Good point, although the same effect might be better served by
separating the commercial gear. I am sure that the motorola guys are
as sick of sifting through the TS520's as I am of downloading 75
headers to find that 55 of them are for
trunking/sabre/jobcomm/phoenix/whatever commercial band rigs that
don't interest the average ham. How about rec.radio.commercial.swap,
and let r.r.s. pick up the rest of the SW/ham/scanner/CB/etc. gear?

Ok, it may not go in this group but I have to get the word out somehow so
I am letting you know here.

The funniest web site EVER has now officially opened using REAL AUDIO technology.

Blackout's Box
WWW.BLACKOUT.COM

You will laugh, you will cry, you will pee on yourself... you will cough up your lunch
from the intense amount of laughter you will be experiencing.

You MUST check out Blackout's Box at

http://www.blackout.com

Hear the most insane stuff you have ever heard, broadcast to your
computer instantly over the net with REAL AUDIO 3.0 which you can DL
for FREE if you don't have it already. This is not a commercial site or a business
or any other type of advertisement. It is just a very funny and very FREE site that I
want Everyone to know about. If you like Monty Python, Jerky Boys, Howard Stern,
Kids In The Hall, The State, Robin Williams, Who's Line Is It Anyway,
or anything like that - you will love Blackout's Box, there is nothing like it on the net.
Don't let the words 'prank call' scare you away.. this is no 12 year old fun, this is
intensely funny candid phone call radio drama that critics on and off the net are giving
two thumbs up.

Blackout's Box simply kicks ASS, stop whatever work you are doing,
take a break, and check it out now! Life is short - LAUGH some.

Blackout's Box
Insanity On the Net

> I am switching from a Yaesu FT890 to an Icom 706, for mobile DX. I
> have heard unfaltering things about the Icom external tuner,
> especially pricing.

Not use what you mean by "unfaltering" ... but I used an Icom
736 with an Icom autotuner (I believe it was an "AT-2") on the
boat to tune the backstay ... it was insulated from the mast and
other rigging at the top and connected via a humongous bronze
turnbuckle to the chainplate at the bottom. The tuner was below
deck in the very aft part (about 20' from the radio) and was connected
to one of the bolts for the chainplate with a heavy insulated copper
wire (about 4 gauge) ... since the chainplate was throughbolted to
the fiberglass hull, it was insulated pretty well ... and the tuner
had NO problem loading up on anything from 160m (which I used
a fair amount at night from Mexico to the states (SSB)) to 10m.

I ran SSB and AMTOR predominantly, with a little HF packet once
in a great while ...

The key to this working well was grounding and bonding ... the engine
block (down below the floor in the bilge), prop shaft and prop, all of the
tankage (2x 70 gal. stainless for H20 and 2x65 gal epoxy-coated black
iron for diesel), as well as the ballast in the keel (a single 11,800 lb.
cast iron casting, encapsulated in fiberglass) were bonded together with
numberous runs of 4" wide heavy copper tape ... actually it was more like
a very long roll of flashing material ... heavier than typical tape ...

The radio(s) were all bonded to this ground system with the shortest
possible runs of the same copper and a double-wide run ran back to
the auto-tuner from the same point where the HF radio ground joined
the main ground system.

The large area of tankage and keel under water provided a LOT of
capacitive coupling to the sea water surrounding the hull and all
of the exposed surface of the propshaft, prop, and all of the bronze
thruhull fittings provided direct contact ... great performance and I
never had a hint of any electrolysis problems (errosion of underwater
metal parts) ... oh, I forgot, there were NO zincs on the prop shaft,
only two roughtly 4" x 6" plate zincs thru-bolted on either side of the
back, bottom part of the keel, where special contact pads of metal
had been cast to stick out flush to the surface of the fiberglass hull

at the right places. (The zincs would last 6 months, plus.)

> I have also heard that the Kenwood AT-50 external tuner will work.
> For those who are using this set-up...

Can't comment on the Kenwood tuner ... sorry.

>
> Any problems hooking the two up?
>
> Any special cables or modifications needed?
>
> What type of antenna are you tuning up. I will be running the
> Outbacker JR. I know there are better, but space and area traveled
> preclude them.

YMMV with the Icom tuner, using a shorter mobile antenna ...
I was loading about 65 feet of 5/8x19 stainless steel rigging
wire ... but for me the performance was flawless and the
reliability excellent ... I never had a moment's trouble in
5 years of bouncing around in constant use in the salt
environment of ocean voyaging ...

appendicies....
>
> Did I miss something?

I don't think so ... and the appendix (like Morse) is SO useless that it typically causes far more trouble for far more people than it could ever possible be worth ... I think it's probably accurate to say that the only reason that they're not routinely removed is that the slight risk of the surgery (not to mention the cost) is (perhaps only marginally) unjustifiable ...

It is not uncommon for perfectly sensible physicians who understand the conditions associated with ocean sailing to recommend propylactic apendectomies for folks who are about to embark on long-term ocean sailing voyages ... just to eliminate the possibility of catastrophic appendicitis in some inconvenient place like 1500 miles and 10 days from nowhere in the middle of the Pacific ocean ...

I believe, also that it was not uncomon in the past for Presidents-elect to quitely have prophylactic apendectomies prior to taking office, to preclude the possiblity of "down-time" at a critical juncture from something so easily prevented.

Eliminating Morse testing would in no way threaten the health of hams, and would clearly significantly improve the health of ham radio overall, so there's no *rational* reason to oppose it ... only emotional ones based on biases, misconceptions, technical ignorance, and "tradition."

What? How many "real world" QSOs consist of 5 letter code groups?
(Answer virtually none ...) Testing on plain text has more sense because
it allows the contextual "reading around the gaps" that is *normal* in
real world situations where OOK Morse is used to transmit messages.

You're getting *really* radical when you suggest that the Pavlovian
conditioning of receiving OOK Morse by ear must be taken to the
level of copying pure gibberish in order to have "merit." Talk about
being a brainwashed cult fanatic!!!!

Of course it would ... that's *exactly* what Jeff and other rabid,
fanatical pro-coders would like to see ... anything that makes
the code test harder and more pro-code-eletist ... after all,
since (in their twisted perspectives) "the code is all that makes
a *true* ham" the harder the code test the better ...

Of course that's completely counter to the future survival of
ham radio and to its' ability to meet its' charter goals, but
who cares? After all, we're talking about a cult religion
(the Morsedist Sect) and they're *really* zealous.

However, such "rationale" for such a high powe limit is, indeed,
questionable in light of today's technologies ...

Far more improvement in link performance can be achieved by
employing better modulation and coding techniques with a power of
say 250W maximum than by adding huge PAs ... *and* at
a much lower monetary cost. That this does not appeal to the large
number of notorious cheapskates in our ranks is only explained by
two factors: 1) their inability to accept or comprehend the very real
benefits available through this more modern approach and 2) that
these approaches tend away from the "stomp anyone and everyone
else into oblivion with their "mine is bigger than yours" overpowering
signal strength ... more modern, effective techniques apparently don't
meet the "brute-force macho" criteria that some personalties require ...

That's a stupid policy ... akin to grandfathering incompetent hams into
new license classes with tougher requirements just because they already
have a license ... just as hams should be retested for competency rather
than receiving privelges for which they are technically incompetent ...
perhaps
downright dangerous... commercial shipping should be required to carry a
full complement of modern communications and safety gear ... or stay in
port ...

Anyone who puts a ship to sea with nothing but obsolete communications
gear is a fool ... hell, on my 42 foot sailboat, I had 2 satellite nav
systems
(GPS and Transit), 2x Marine VHF (with spare antennae), marine VHF HT,
HF-SSB, HF ham 160-10m, 2x EPIRB (one in main vessel, one packed in
the deck-mounted liferaft, dual redundant power systems, and dual redundant
charging systems, plus computer communications via AMTOR, SITOR, and
HF packet ... and oh, yes, a 2m/440 dual-band ham rig (50W) which could,
in an emergency, operate on marine freqs as well as a 2m/440 dual band
with the same capabilities ... I also had WESAT/WEFAX and NAVTEX
receive capability. (BTW, backup for the satnav systems was another GPS

... however this second "GPS" took no power ... it was a "Grey Plastic Sextant" of the top-of-the Davis line variety ... quite servicable.)

I have little sympathy for someone who puts a grossly ill-equipped vessel to
sea, then has problems, and complains about the results ... to cite this example of an ill-equipped Russian vessel relying on an antiquated 500kHz OOK Morse system that's being abandoned out from under it (at the direction of the international marine community) as a "reason" for maintaining Morse testing for ham licenses is absurd to the point of obnoxiousness ... it is an
outright attempt to misslead (dupe) the reader into "buying into" a totally bogus
premise ...

I have never, in over 20 years of being a ham, known or even heard of a *single*
ham who mantains a regular watch on the outdated 500 kHz marine emergency frequency ... or 2182 for that matter ... when I was crusing in the
above-mentioned 42' sailboat, I didn't waste the power leaving the HF radio on
all the time ... monitoring the VHF was quite adequate to assure I'd hear calls
from any nearby vessels who wanted to communicate ... I talked to LOTs of big cargo ships, tankers, and famous cruise ships, including the QEII, Viking
Serenade, and the Rotterdam ... ususally in the wee small hours of the morning,
when I wanted to make sure they were aware we were out there and that they were not planning to make a near-term course change that would put us on a collision course ....

Why, do we station USCG cutters off of the Netherlands?

Sounds more like a ship that is did not belong
on the high seas anyway. This was not some
mini vessel.

Steve is correct, and even for commercial enterprises, the
norm is a grandfathered situation rather than a forcing of an
end to someone's business. I suspect there's more to what
happened in Cliff's city than simply a desire to change
zoning regulations.

1456. FS: Kenwood TM-742a Dual Band Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-21 00:00:00 UTC
From: srwhite@ibm.net
Message-ID: <335ae852.0@news1.ibm.net>
Source record: 199885

I'm selling my Kenwood TM-742a mobile that I
purchased about a year ago.

Features:
- Dual-Band Operation (2m and 70cm Installed)
- Tri-Band Capable, Add a Third Band!
- Simultaneous Receive on All Three Bands!
- 2-Way Detachable Front Panel
- 100 Memories per Band
- Cross-Band Repeat
- DTMF Remote Control Capability
- Mint Condition! Used as a Base Station!
- Optional TSU-7 CTCSS Decoder Installed

Includes:
- Comet CF-4160 2m/70cm Duplexer
- Daiwa 2m/60cm Cross-Needle SWR/Power Meter
- Original Boxes and Manuals for everything!
- Extra copy of owners manual.

Paid over $800 a year ago.
I'm asking $600 with shipping!

Thanks,
Steve White
N2RWE

I have a complete listing of Audio/Video/Photo/Computer and Amateur
Radio stuff that I'm selling at my company web site at
http://mypage.ihost.com/unitedsound

Far too much bandwidth snipped

Actually Stan,

You tried to make the ususal lazy winer blah blah accusation and you made a mistake. I'm not nocode nor will I ever be nocode again at least in the sense that the term is used on the newsgroups. No code here means not having passed the code test for HF access. I have done that so I am not "nocode". Neither am I anti code I do not want to see it banned or any of the other preposterous claims I have heard. I would like to see it stand on its own merits rather than continue its welfare exsistence. Apparently you code fans don't believe it can or you would not be so adamant about continuing the dole.

Lest you continue to misunderstand let me clarify my position. I am against fast code testing. Our treaty obligations are satisfied by 5 WPM (actually no speed is specified) so why have faster testing. Well the only reason I can come up with is so that the code savants can look down their noses at other who they (the savants)consider less worthy.

The collateral damage to the hobby as a whole from all of this is conviently covered up by the security blanket, maintaining the standards. Why not tell is like it really is, maintining the status quo. Interestigly it is attitudes like yours than drove me from a bit pro code test, to neutral, to strongly anti code test. I wonder how many more there are like me who don't want your verbal abuse so just say nothing.

Free at last, free at last, I passed my code I'm free at last.

Jerry

... well said ... it seems to me some people are wired in certain ways and sometimes the wiring compels them to be afraid of anything new, different, non-status quo, or which cannot be understood ... sadly, a response is all too often "acted out" by striking out or attacking that which is feared, much in the manner of the ex-mm-er and his cronies ... those who feel powerless when they allow themselves to be intimidated and challenged when confronted by that which they cannot (or will not) handle, may say they are "not afraid," yet their other words and actions belie this ... again, all too often, the result is unnecessary interference in the lives of others: everyone suffers ...

would it be unreasonable to propose that, since one cannot have everything, and one cannot have everything their way all the time, and since all the people cannot be pleased all the time, it might be of value to be open and flexible, willing to compromise, and in the process, finding life easier to be lived (live and let live)? ...

Hello, All

Name is Dave and I will be going to Rome in one month. Any amateurs there know much about the amateur station in the Vatican? Can we work it as guest operators? What type of equipment do they have?

Also, any hams interested in meeting up with me? would love to try some eye-ball QSOs!

Thanks!

This begs the question, why is it necessary for USA amateurs to be
licensed for so much more power than those in most other countries? I
don't know of any other countries where 1.5 kW output is allowed. A
few countries allow 1 kW; most limit amateurs to 400W output or less.

>>http://www.hamradio-online.com

Yes indeed. I touch on that in the story that I wrote on this. Directional antennas can and are used to minimize interference. Also, as I note in the story, the 2.4 GHz band is home to consumer microwave ovens which are a source of significant interference already. The one issue this does change is that unlicensed operations would now be likely to use external antennas, putting their signals out into the real world, as compared to typical unlicensed operation using "low level" antennas inside buildings. The most likely scenario is an increase in the noise floor in the 2.4 GHz and 5.7 GHz allocations. More troubling, perhaps is that we can expect many commercial systems to use these bands for microwave links (look at the list of who filed comments) due to the expected much lower cost of just setting up a link without the costs of licensing and the engineering, environmental and RF safety studies required to apply for a licensed link. On the plus side, more gear would be available for use by Amateurs in these bands.

I agree with that statement. We have a "sell-newsgroup" and everyone should use it. However, as there is a _lot_ of traffic in r.r.a.swap, how about splitting this group into a WBT and a FS part?

Well, historical reasons to start out with - how many European countries
are thousands of miles wide? Higher power was somewhat more necessary
in an era of relatively insensitive receivers. And in the US, once
something becomes embedded in law, it stays for a looooong time. :-)

Not quite. Pre-1995 built ships are permitted to use the old fashioned
system until 31 Jan 99, in accordance with IMO recommendations and
resolutions.

ANARTS News Bulletin 955 20 APRIL 1997

[Sorry, Dean :-)]

This is the Australian National Amateur Radio Teleprinter Society

with our weekly Rtty Broadcast. We transmit on the following

frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN)

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 955 20 APRIL 1997

COLS COLUMN

A BREAK THIS WEEK FROM THE EARLY COMMUNICTIONS SERIES. NEXT

WEEK THE SERIES CONTINUES WITH THE WORK OF MICHAEL FARADAY.

PROPAGATION DURING THE 40 METRE TRANSMISSION OF THE RTTY CAST

HAS BEEN VERY GOOD. LAST WEEK JIM VK2BQS WAS 599 PLUS WITH ME,

HE IS USUALLY MUCH LOWER THAN THAN WITH A FAIR AMOUNT OF QSB.

AT THE END OF CALLBACKS JIM AND I USUALLY HAVE A CHAT USING

THE AMTOR FEC MODE, IT IS MUCH MORE RELIABLE THAN RTTY. IF ANY

STATION WANTS TO HANG AROUND AFTER THE CAST THEY WOULD BE
WELCOME TO JOIN US.
ANOTHER STATION WHO WAS ABLE TO MAKE IT LAST WEEK WAS BOB
VK2GQC WHO REGULARLY CALLS IN AND BACK WHEN CONDITIONS ARE
GOOD. HE HAS BEEN UNABLE TO TAKE THE CAST FOR A LONG TIME AND
IT WAS A PLEASANT SURPRISE TO EXCHANGE 20 OVER THE 9 BOTHWAYS.
DARE I SAY THAT THINGS ARE ON THE UP!!!!!, IT WOULD BE NICE TO
THINK SO BUT IT WILL NEED A FEW MORE WEEKS OF GOOD PROPAGATION
BEFORE WE CAN SAY THINK IN THOSE TERMS.
IN THE MEANTIME - HOW ABOUT SOME OF THE STATIONS THAT READ THIS
BROADCAST ON PAKET RADIO COMING UP ON 40 METRES AND TAKING IT
BY RTTY. MOST MODEMS THESE DAYS HAVE MULTI FUNCTION MODES. YES
FOLKS RTTY IS STILL ALIVE AND DOING WELL, JUST LOOK AT THE DX
NOTES IF YOU NEED PROOF.
THATS ALL FOR THIS WEEK, 73'S DE COL VK2CTD

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(11 APRIL - 17 APRIL)
ISSUED ON 18 APRIL 1997
SUMMARY
Date 11 12 13 14 15 16 17
10cm 77 76 79 77 79 75 72
A 32 9 7 5 2 14 (17 ESTIMATED)
T 30 22 24 22 20 18 19
SOLAR ACTIVITY WAS VERY LOW 11TH TO 13TH, AND 16TH TO 17TH
APRIL; LOW ON 13TH AND 14TH.
GEOMAGNETIC ACTIVITY AT LEARMONTH W.A. WAS QUIET TO UNSETTLED
ON 14TH AND 15TH; QUIET TO ACTIVE ON 16TH ; UNSETTLED 12TH AND
13TH; UNSETTLED TO ACTIVE ON 17TH, AND ACTIVE ON 11TH.
FREQUENCIES WERE FREQUENTLY ENHANCED TO 15 PER CENT DURING THE
PERIOD, WITH ENHANCEMENT TO 25 PER CENT TO 0900 UT ON 17TH. AT

OTHER TIMES, ESPECIALLY ON 14TH AND 16TH, FREQUENCIES WERE

NEAR PREDICTED MONTHLY VALUES.

FORECAST (18 APRIL - 24 APRIL)

SOLAR: VERY LOW.

GEOMAGNETIC: UNSETTLED, WITH THE CHANCE OF ISOLATED ACTIVE

LEVELS DURING INTERVAL 21 - 23 APRIL.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES FOR LOW LATITUDE

AND MID-LATITUDE. UP TO 30 PER CENT DEPRESSION

IN MUFS POSSIBLE FOR HIGH LATITUDE REGION.

ARLD017 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, 425DXnews and Contest Corral from QST. Thanks to all.

MONACO, 3A. Look for Special Event station 3A7A to be active from April 15 to 30. The station will be QRV on all bands and modes to celebrate 700 years of the Grimaldi Dynasty. QSL via bureau.

MAURITIUS, 3B. Kenton, NK6F, will be visiting 3B8CF and plans to be active from his QTH as 3B8/NK6F. He will be QRV from April 20 to June 8, with activity mainly on CW. QSL to home call.

TUNISIA, 3V. Giovanni, I5JHW, will be active from the QTH of 3V8BB from April 28 to May 5. He and I5SNR, I5OYY and IK5EKB will participate in the ARI International Contest, possibly as 3V5I. QSL via I5JHW.

MALDIVES, 8Q. Juan, EA2BP, and Jose, EA2CLU, will be active from May 4 to 14, using the callsigns 8Q7BP and 8Q7LU, respectively. They will be QRV on all bands, using SSB and CW, and possibly some RTTY. QSL to home calls.

BANGLADESH, S2. Vittorio, IK1SLY/S21YS, and Manju, S21AM, are now QRV on 20 meters. QSL via IK1FLF.

CRETE, SV9. Bert, PA3GIO, will be active on 20 to 10 meters, including the newer bands, and possibly on 80 and 40 meters,

as SV9/PA3GIO/M and SV9/PA3GIO/P from April 28 to May 5. QSL to home call.

TURKEY, TA. Nilay, TA3YJ, and YL operator Berkin, TA3J, will be QRV as YM3ATA from April 17 to 27, to celebrate Childrens' Day, which occurs on April 23. QSL to TA3YJ.

The Ohio/Penn Dx PacketCluster

DX Bulletin No. 300 -- excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, W3UR, The Daily DX, W1AA, WB2YQH DXReport, K4TS, WT4K, W5FKX, K7JJ, NL7WA, K8YSE, EA2CLU, EY8MM, GB2ATG British Amateur Radio Teledata Group, G4BUE DX News Sheet, ON4WW, PS7AB, T93Y, VE9AA and XV7SW for the following DX information.

9X, RWANDA. By the time you read this, Mark, ON4WW, should be back in Kigali. He hopes to obtain permission to operate on new frequencies (40/80 instead of 20/160m) or even a full license. Mark was active as 9X4WW last time.

A7, Qatar. The BARTG News reports Jean, J28JJ, is now active on RTTY from the QARS club station as A71A. He usually can be found on Saturday. QSL via QARS Radio Club, GM 222122, Doha, Qatar.

CY9, ST. PAUL ISLAND. Mike VE9AA, states the CY9AA operation by K7BV, VE1PZ, and himself will now be from June 26th to July 3rd.

EK, ARMENIA. EK6OCM states to look for him to be active on 20 meters RTTY. QSL PSE via K6EID.

FR/J, JUAN DE NOVA. The DXReport states FR5KH/J and FR5FT/J are reportedly active for 50 days from March 21. QSL via F6FNU.

SV9, CRETE. Bert, PA3GIO, will be active from here April 28-

May 5th. Operations will be on 20-10 meters SSB plus WARC bands and maybe 40/80 meters. His callsigns will be SV9/PA3GIO/P and SV9/PA3GIO/M.

ZK1, NORTH COOK ISLANDS. The Date Line DX Association is in the final planning stages of an operation to North Cook scheduled for September 20-27th. This operation will have the same goals of its last operation, AL7EL/KH9 Wake Island, that being priority to low bands and East Coast North America and EU. North Cook is currently ranked number 85 in the recent ARRL DXCC Most Wanted 100 and is ranked in the mid 20s for Europe. Three radios will be operational with one of those radios specifically for RTTY where it is ranked number 46 overall on RTTY. Numerous sponsors are providing equipment. Current operators are N7RO, N4RF (ex-AB4AE), WA4YBV, KI6AN and K8XP (ex-AL7EL). They are solicitating for an additional operator, specifically someone who is a Medical Doctor or one with equal professional qualifications. Anyone interested can contact Tom, K8XP, at: K4TSJat juno.com.

ZV, BRAZIL. Look for ZV3A to be active from the Brazilian Tramandai Lighthouse (good for the Brazilian Lighthouse Award (DFB): RS-04) from April 25-27th. Operations will be on SSB 40-20 meters (Also check the Brazil DX Net). QSL via PY3AAC: A.V.Christensen - Rua Ir. Jose Otao 170/1302, 90035-060, P.Alegre/RS/Brazil, or via the bureau.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60

Blacktown 2148 Australia, or fax to (02) 9672-3392, or by

packet to VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

1475. Internet Phone / RptrLink Net in NB

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-21 00:00:00 UTC
From: trynor@mis.ca
Message-ID: <5jflrq$g07$1@garnet.nbnet.nb.ca>
Source record: 199904

Hello to all!

As of last week, the VE9ARZ repeater network which consists of four wide coverage area repeaters in southern New Brunswick, Canada, are now linked into the Internet using Internet using Internet Phone and RptrLink.

On this repeater network every Thursday night at 9:00pm AST we conduct a net usually until 10:00 AST. What I'm looking for is other repeater owners world wide who would be interested in connecting their repeater network at that time to do a "global" net.

I think this would be a very interesting experience for both groups of hams to learn a bit about how hams in other areas commuincate and discuss matters of interest.

If anybody is interested in trying this, please e-mail me at trynor@nbnet.nb.ca

Sincerely,

Don Trynor VE9NZ

Even back in the 60s we had a solution to that problem. It is called
the tape recorder. We'd pass books of traffic at normal reading speed
while the other station recorded,, or on nights when signals were good
at 2x reading speed by recording at 7.5 ips and playing the tape over
the air at 15 ips. The receiving station would record at 15 ips and
play back, a sentence at a time, at 7.5 ips and transcribe the
messages. Meanwhile other stations would be passing their traffic.
When transcription was complete, any fills were requested (rarely
needed since you could just rewind the tape and listen to it again)
and message receipt was confirmed. Our phone net QTC was
usually about 4x that of our sister CW traffic net.

Now this is still a pretty crummy way to pass traffic, and with
crummy band conditions it got slow due to more requests for
fills, but it worked. With robust digital modes available to us today,
we can pass traffic much faster and more accurately than we could
back then, or than you can do today with Morse.

Gary

How incongruous! Test an individual for a skill which is prohibited by
law to use on the amateur bands.

Lets see....the question is "Would you want Burt Fisher to (be)
teaching your child". Well, I have visited his web page, and read
many of his postings. Burt seems to be a progressive-minded
individual, who is not afraid to raise questions about various
topics and issues, related to the radio hobby and others.
I don't know about you, but some of the better teachers of which
I had the pleasure of being instructed by all had the common
trait of not being afraid to leap beyond the stale material within
our tax-dollar-purchased-to-give-the-publishing-house-a-BIG-kickback
textbooks, and instead taught us how to THINK independently.
One Professor I very much remember would take a current news story
from the local paper and ask our opinions about it, then challenge us to
prove to him, each other and ourselves that what was printed was
indeed the truth, or just another opinion from someone else who
does not have a clue either. In about 80% of the cases, our research
proved that much of what was posted as news, was instead greatly
expounded upon by the writer of the article from the actual events.
Lessons taught: Do not be afraid to ask questions as much of what is
out there is pure bull---t. I see Burt in the same role as my former Prof.
He seems to not be afraid to raise a question or gore a "sacred-cow"
within the stuffy and stodgy realms of the hobby called ham radio.
It's a darn shame there aren't more people like Burt as far as I'm
concerned, and not only would I welcome him teaching my kids, but
I feel he is qualified to hold a position on the Board of Directors of an
Ivy League university as well. Anyone who would ask questions or
challenge the status-quo in order to attempt to advance the field of
endeavor or study, and teach people to do the same, is a real teacher.

Pom E Granate

ps: I'd love to hear Burt Fisher and Wayne Green on the same platform.

Steve:
There were NO towers involved in this case, only a
couple of phone poles(less than 35') and a house. The area was
previously unzoned, then zoned residential. Another site
with a 75' tower a couple of blocks down the street survived.
I could go into all the gritty details, that's not the point. The point is
that if the municipality want to get rid of something, they can. The
PCS industry is finding this out. Local judges are over ruling
the Telcom legislation almost everyday. They have a catch all
called appropriate use which can mean anything they want.
The bright side is that the PCS industry will fight the tower
wars and hopefully the Hams will benefit. The DBS industry
has been beating its head against this issue for years and
has had some help with federal legislation, but the local
municipalities are under the impression that they can overrule
anybody. I remember a bike path that went to the Supreme
Court twice.

Could someone give me any information on any work-all-states nets on HF? I need info like days, times, and frequencies. Any band okay. I would also like information about QSL managers for each of the nets and how that all works (I've never used managers, just sent direct).

Also, if you need UTAH, tell me which net and I'll meet ya there, if I can!

I need a few states to complete WAS, like, say 50! I've moved over 100 miles since I was last working on it and can't use my old cards now. So yes! I need your state! ;-)

Coded, meaning random, Jim. Sending plain text allows the examinee to
"predict" upcoming letters - that doesn't entirely test his ability
to copy at speed.

For almost as long as there has been activity on 2m FM, 146.520
simplex has been regarded as the National Simplex Calling Frequency.
It's a great place to find activity in most places. Courtesy dictates
that once communication is established, the parties should move off .52
and to a mutually agrred on frequency, keeping with the band plan.

A repeater guide will list the "local" repeaters in specific area, which
usually have more activity than does simplex. However, it has been my
observation that it can be easier to get an actual response on simplex,
than on a repeater - many of which are "semi-closed"...that is, people
monitoring don't always strike up conversations with new users.

For information on the 2m band plan, check the ARRL Repeater Directory,
or contact your local ham club.

> house and 50 yards from the nearest neighbor.

Unfortunately, the biggest problem nowadays is typically with the neighbors' consumer electronics. There are so many plastic-cased, minimum filtered devices out there that it's hard to avoid RFI entirely. The FCC even put out a circular about phone interference & how it was generally the fault of the phone...

None of that really helps us, though, eh?

What you can do: 1) Make sure your station is operating properly. Keep all of your operating parameters within the manufacturer's stated limits. This includes modulation levels.
2) Install and maintain an effective earth grounding system.
3) Use the best quality coaxial line you can possibly find. I use double-shielded military-grade cable. It'll help keep stray noise FROM consumer electronics out of your system, too.
4) Place your antenna as far from anything else as you can. Be especially aware of down spouts, fences, etc. Rusty or intermittent metal contacts near your antenna can cause point rectification and lead to RFI.
5) Maintain your antenna in top shape at all times. Make sure all connections are clean and snug. Solder everything that can be soldered. Use an iron with enough heat to make a solid joint.
6) If you live in a fringe TV area, encourage your neighbors to get on cable or DSS. That's only a slightly humorous suggestion.
7) In a similar vein, encourage your neighbors to use coaxial line on their TV antennas, and make sure the antennas are of good quality with snug connections.
8) Avoid running your antenna parallel to phone lines, etc.
9) Use a low pass filter on your gear -- even if you don't think it's necessary...being able to point to a filter shows you have taken the time to consider your neighbors if something does develop.
10) Use the minimum power necessary to communicate. If you have RFI, going from 100 watts to 50 might make it clear up, with almost no effect

on your ability to communicate.

Whew...that's enough. You get the idea. Good luck!

I wouldn't bother to try to cook them. Instead, they resonate extremely
well on 2 meters. They're much better as antennas. 73, k7jy.

You slighted the single lever key for use with a keyer. That's a bit easier to learn than a squeeze key, but the squeeze key is faster once you master the non-intuitive motions.

For what it is worth, I recomend starting out with a straight key. It is more intuitive to use until you're really comfortable with Morse. Then you can move on to the bugs or paddles and keyers. (Or, horrors, a keyboard.) Keyboards are the fastest and cleanest way to send code, of course.

PLANKED CARP

Clean, skin, and fillet the fish. Marinate in cooking sherry for an hour
or so, then lay the fillets on an oak plank. Season to taste, and place
in a 475F oven for 30 minutes, or until the flesh separates with a fork.

Then throw the fish away, drink the cooking sherry, and eat the board.

In some countries, especially in Europe, this has already happened.
However, the degree of immunity is often somewhere around 3V/m, not
nearly enough to protect against typical amateur legal-limit operation.
The flip side of this coin is that once the regulators have
susceptibility regulations in effect, it is but a small step to stipulate
that the radio operators not exceed those field-strength limits in their
neighbors' homes. There is something to be said for the status quo, at
least in some circumstances.

Well, the deck is stacked. First, we have the clearly stated federal
pre-emption on our side. We also have some rather clear statements in
the FCC material that fundamental-overload is NOT caused by any defects
in the transmitter. In practice, the only higher level would be to get
changes made in US federal law and FCC regulations.

I am switching from a Yaesu FT890 to an Icom 706, for mobile DX. I have heard unfaltering things about the Icom external tuner, especially pricing.

I have also heard that the Kenwood AT-50 external tuner will work. For those who are using this set-up...

Any problems hooking the two up?

Any special cables or modifications needed?

What type of antenna are you tuning up. I will be running the Outbacker JR. I know there are better, but space and area traveled preclude them.

Any comments or suggestions are graciously accepted.

Thanks and c u on HF

Actually, by transmitter standards, 1500 watts is not all that much
power. Compare this to the 50 kW for AM broadcast stations or the
multi-megawatt ERP of some TV transmitters and it doesn't look all that
big.

About a month ago, the neighbor of a ham came to the ARRL lobby. She was
experiencing telephone interference. I explained the causes and cures,
to little avail. When I learned she lived 15 miles from here, as a
personal volunteer I offered to go to her house and fix her RFI problem,
but stipulated that she and her neighbor would have to talk to each other
and be willing to cooperate to solve the problem. She gave me a dirty
look, and said, "I can see I am wasting my time here!" and stormed out
the front door.

Sometimes, they don't want to fix the RFI problem, they want to be right!

Got just what you need right on the WWW!

I have several 6L6 transmitter articles and schematics etc.
available at:

http://www.mnsinc.com/bry/hamfiles.htm

E-mail me and let me know how you are doing. I have several such
transmitters here and we also have an e-mail discussion group for
folks that like to build small tube transmitters.

It is called GLOWBUGS.

To subscribe, just send an E-mail to:

majordomo@www.atl.org

With NO SUBJECT, and the text:

subscribe glowbugs YOUR-E-MAIL-ADDRESS

==========

EVERYONE IS INVITED TO JOIN US!!

Then you just send your messages to the group to:

glowbugs@www.atl.org and they will all see it and
you will get a few messages a day that are interesting.
I have had a LOT of great help from this group!

I hope that helps!! Come on in, Carol!!

Bry, AF4K
To reply to this message, you MUST remove ".no.ads" from my address.

Hi George - I had one of their portable alert radios - worked just
fine (even with our NWS office's *very* undermodulated 1050 Hz
tone). Never could get a good night's sleep with it left on
during winter months, though, due to the numerous warnings
being posted.

Even though EAS is replacing EBS, the NWS will continue using the warning
alert tone "...probably forever" in the words of a California NWS official.
Be wary of people like Gary Coffman spreading misinformation by claiming
otherwise.

ST>> Please express a reason for retention of the code test for an amateur
ST>> license other than "you have passed a code test, therefore all others
ST>> must also pass a code test."

ST><snip>

You have not provided an answer. You insist and insist on the code
test as if it is some "moral imperative" and yet you do not justify
it. Those who do not accept your moral imperative are then labelled
(wrongly) as "whiners." Please try to explain your position without
all the pejoratives against those who do not favor the code test.

ST>Jeez Len, except for a few facts you got it almost right.
ST>You use the same tired old arguments.

No. If you call them "tired old arguments," then I'm forced to call
you a "tired old argumentative coder." Please try to avoid the
labels on others and explain your position in favor of the code test.

ST>First...my real point (you seemed to miss it) is that there are
ST>lots more than one whiners on the *various* newgroups that are no code
ST>or

All the "whiners" in rec.radio.amateur.policy except myself are
licensed radio amateurs who have already been code tested. Some got
their license via FCC examination rather than the VEC system.

ST>They are missing a lot of fun by taking a 'moral' stand. The pragmatic
ST>approach is to take the #$%^ code test, upgrade, get on HF ....and keep
ST>fighting to change the world or at least the ARRL WARU and any other
ST>organizations. eg they don't want to get involved...they just want to
ST>whine.

On the other hand, you are taking an arrogant, righteous stand by maintaining the code test and insisting that all should jump through the hoops you hold in place. Is arrogance and righteousness some new kind of "morality?"

The "whiner" label is quite tiresome. It attempts to prove some point about international amateur radio licensing by calling others names. Radio regulations are not set by one side calling the other names. Radio regulations are set by governments. In the USA the FCC does not require Commissioners to be licensed radio amateurs in order to set rules and regulations for the amateur radio service.

[it's the IARU, not WARU, by the way...you can see that on the ARRL website where the IARU has its own page]

Burt's posting may be a joke to him, but I am told that neither the SAREX Working Group, the ARRL nor NASA Press Relations are laughing. None of the foregoing apreciate the circulation of innacurate material.

Because of this posting and the negative impact it has already had on the program I am working on an accurate report to correct the material put out here and read worldwide. It will be part of an upcoming Newsline report and there will probably be similar "corrections" in other ham news publications.

1509. Chirpsounder schedules?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-22 00:00:00 UTC
From: jschueth@sfu.ca
Message-ID: <5jh5bkkae1@morgoth.sfu.ca>
Source record: 199734
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

Hi,

does anybody have a transmission schedule of chirpsounder stations that he could post, or tell me where to find one?

As far as I know, these stations typically sweep the HF spectrum every 15 minutes at a rate of 100 kHz/sec. In an SSB receiver of 3 kHz bandwitch, such a signal should cause a chirp of 30 msec duration, long enough to recognize it by ear. Quite likely that you already heared it many times and ignored it...

Using a computer and a receiver with a CAT interface, one might even change the RX frequency in steps of, say, 50 kHz every 0.5 sec, so that a sound like "chip-chip-chip-chip..." is heared, provided the timing is right within a few tens of a second. One could simply watch the frequency display and read the MUF when the signal disappears.

Has anybody tried "chirpsounder DXing" yet? The required hardware is available in many ham shacks...

1514. Digest of Articles - QST Feb 97 (Long - 37k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-22 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5ji8hc$b9@news1.infinet.com>
Source record: 199739
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the February, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:See the Signals You Hear
Author>Cox, Donald - AA3EK
Source>QST Feb 97, pp. 28-32
Abstract>Any DOS- or Windows-based PC that contains a sound card can be
used as an audio spectrum analyzer. They are most useful for monitoring
the audio output of receivers for tuning or signal analysis.

Digest>This article describes the use of a personal computer containing
a sound card plus appropriate software, the combination of which will
act as an audio spectrum analyzer. No additional hardware is required.

The audio output from the receiver or transceiver is fed to the input of the sound card and the computer does the rest.

More than a dozen photographs of screens illustrate the results that can be expected using different software packages. Especially interesting are images showing the spectra of signals of packet, RTTY, and other digital signals. The peaks of the Mark and Space frequencies are very clear, and one illustration shows the patterns of four independent signals closely spaced in a passband of some 4-kHz. Others show the use of the system to display filter response patterns.

The systems are especially useful as tuning aids for AMTOR, PACTOR, packet, and RTTY operators. Most of the available software packages make it possible to generate marker signals at precisely known frequencies that show on the spectrum trace. Tuning the transmitter frequencies and adjusting receiver filter frequencies then become simple.

A number of commercial software packages that are suitable for this usage are for sale at prices up to several hundred dollars. Also available are freeware and shareware programs that can be downloaded from bulletin boards and World Wide Web sites.

Three of the freeware programs are: Phillip VanBaren's (1) FREQ V5.1, (2) his SpecGram V2.0; and (3) Craig Walsh's MicFFT V1.2. FREQ V5.1 and MicFFT V1.2 display instantaneous spectra; SpecGram V2.0 plots a spectrogram. They are available by FTP from the following sites:
(1) ftp://ftp.simtel.net/pub/simtelnet/msdos/sound/freq51.zip
(2) ftp://ftp,simtel.net/pub/simtelnet/msdos/sound/specgrm2.zip
(3) ftp://gate.msoasis.com/dir20/micfft12.zip

The RTTY program Hamcomm contains a pseudo-spectrum-analyzer display. It is widely available from amateur-radio-oriented BBSs and websites.

Title>TA2:A Pocket-Size Direct Reading VHF SWR Meter
Author>VanRemmen, Bill - KA2WFJ
Source>QST Feb 97, pp. 33-36
Abstract>Construction information for a tiny, self-contained VHF SWR meter.

Digest>This article gives complete construction information for an SWR meter built into a small, molded plastic case available from Radio Shack. It is powered by a 9-volt transistor battery that fits in the case and, in fact, takes up more than half of it.

The SWR sensor is a short length of 50-ohm strip line with pickup loops attached to sample the forward and reflected power levels, respectively. The samples of RF are rectified by germanium diodes and filtered as inputs to an LM3914 IC. The IC computes the SWR and drives the ten LED segments of a bar-graph display.

The IC has provision for a reference voltage to set the scale of the indicator. In this circuit, a voltage divider across the power supply is provided to develop a reference voltage that limits the full-scale to an SWR of 3.0. Thus the ten bars on the display provide a relatively high-resolution measurement. The tacit assumption is that SWRs above 3.0 need not be accurately measured; it is sufficient to know that they are too high.

Photographs and dimensioned drawings fully illustrate the construction details, although the exact length of the strip line is nowhere indicated. A schematic diagram and parts list are also provided.

A PC-board layout diagram can be obtained via Internet (http://www.frontiernet.net/~billy/miniswr1/miniswr1.ps), or by FTP from: oak.oakland.edu, file name: miniswr1.ps in the directory: /pub/hamradio/arrl; or from the ARRL bulletin board: (860) 594-0306. A template package can be obtained from the ARRL Technical Department Secretary, 225 Main Street, Newington, CT 06111-1494 for $2.00 for members, or $4.00 for non-members. Request the VanRemmen MINISWR1 template.

Title>TA3:Build a $60 Talking Repeater Controller
Author>Otterson, Jeff - N1KDO; Gailunas, Peter - KA1OKQ;
and Cox, Rich - N1LTL
Source>QST Feb 97, pp. 37-40
Abstract>Contains full details for constructing a programmable controller to be used to control a duplex repeater, a link, or a simplex repeater.

Digest>The authors of this article have developed a programmable controller that provides a full set of functions, yet consumes very little power and has a total cost of only about $60. The article contains complete construction details, including schematic diagrams and parts lists.

The unit can be used to control a duplex repeater, a link, or a simplex repeater. Among the features are remote control and programming by DTMF, a hang timer, time-out and ID timers, CW ID, and stored voice messages for all uses other than link control.

The circuit is built around three large-scale ICs: a Microchip PIC16C84 microcontroller, a Mitel/Teltone M8870 DTMF decoder, and an ISD1420 voice recorder/playback. The microcontroller provides all the timers, the CW generation, DTMF validation, and most other critical functions. The authors have made the necessary software available for downloading from the Internet, and it may be used by amateurs for non-commercial applications without restriction, worldwide.

Partial kits of parts, including pre-programmed chips and the PC-board are available for $35, including domestic shipping, from Peter Gailunas, 444 Micol Road, Pembroke, NH 03275. Assembled and tested complete controllers are also available from the same source for $129.

PRODUCT REVIEW (PR)
Conductor: Lindquist, Rick - N1RL
Sr. Asst. Technical Editor

Title>PR1:Yaesu FT-600 MF/HF Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Feb 97, pp. 68-71
Abstract>Review of a new Yaesu transceiver that seems designed more for commercial use than for amateurs.

Digest>The Yaesu FT-600 is a small, rugged transceiver designed for mobile use by either amateurs or commercial operators. It is designed to be simple to use and has only four knobs on the front panel. It does not provide some of the sophisticated features desired by many dedicated hobbyists.

The front panel is clean with a large, bright amber LCD display and a loudspeaker facing forward. The reviewer found that he could turn up the volume control to a "ear-splitting" level with little distortion. The tuning knob is large and the tuning rate can be set over a range of 10-Hz. to 100-Hz., but the readout only displays to the closest 100 Hz., so fine adjustments do not appear on the frequency display. The knob is detented, so tends to tune in steps, like discrete channels. Although this may be of value for commercial use, it has to be considered a nuisance for amateurs. For example, it makes it impossible to "spin" the knob across a band.

On the rear panel, the FT-600 has ports for computer control, audio output, external speaker, and jacks for a CW key, external amplifier, automatic antenna tuner control, antenna, and d.c. power. There is also an AFSK port for digital modes. Power requirement is 13.8-volts d.c. at 20-amps, for full 100-watt output.

Among the features that are common in other transceivers but not in the FT-600 are a built-in automatic antenna tuner, VOX, IF shift, double VFOs, full break-in (QSK) keying, controllable speech processor, and an external power output adjustment, among others.

The reviewer found that, when he was operating CW, the shift from receiving to transmitting was sluggish. For moderately high speed code, the first "dit" was often omitted because the transmitter was so slow to come on. At the end of a transmission, it took a full second for the receiver to be reactivated. This factor, alone, would seem to make it unusable for amateur contest work. Finally, the operation manual is very inadequate. It does not even contain a block diagram of the system.

The street selling price is of the order of $900. A 500-Hz. CW filter adds $127.

Title>PR2:Down East Microwave Model DEM50-28CK 6-Meter Transverter Kit
Author>Swanson, Glenn - KB1GW
Source>QST Feb 97, pp. 71-73
Abstract>Describes a 6-meter to 10-meter transverter built from a kit. Performance is good, but it needs an additional filter to reduce spurious outputs.

Digest>For an amateur who is already equipped with an HF transceiver that covers the 10-meter band, but no higher, one of the least expensive ways to work the 6-meter band is to use a transverter that converts received signals from 6-meters to the 10-meter band, and conversely for transmitted signals. Down East Microwave is offering such a transverter in either kit or completed form. In the kit, however, the electronic parts are completely assembled on a PC-board, so construction is limited to mounting subassemblies and hardware into a pre-drilled, cast-aluminum box.

The electronic circuit contains an interface that matches to the transceiver. Two versions are offered, one designed to fit certain peculiarities of the Kenwood TS-850, and the other to work with almost any other transceiver on the market.

When the reviewer finished construction of the kit, he gave the transmitter to the ARRL Lab for test. They discovered that the transmitter showed spurious emissions in excess of the levels allowed by FCC regulations. Consequently, to operate the unit legally, it is necessary to use a low-pass filter on the output. When the filter recommended by DEM was added, the lab found that the spurious output was still outside of allowable limits unless the output power was limited to 11-watts. A filter built by Zack Lau - KH6CP/1 and described in QEX magazine, September, 1995, p. 24, reduced the spurs to well under the limits and allowed full power to be used.

The noise figure specified by the manufacturer is 1.0-dB. maximum; but the lab found that, even without an output filter, it measured 2.1-dB. After a filter was added, it measured 3.6-dB.

The reviewer's HF transceiver tunes only as high as 30.0-mHz., while the DEM transverter converts the low end of the 50-54-mHz. band to 28-mHz., which causes the top end to be at 32-mHz. So, he could not receive the FM portion of the band from 52- to 54-mHz. DEM offers a unit with a different crystal installed, which converts the band to 26-mHz. to 30-mHz., to correct the problem.

The manufacturer's list price for the "complete" kit (not including the T/R relay nor the output filter) is $295. The T/R relay adds $20, and the recommended filter $32 to $35, depending on the r.f. connector configuration.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Stratwarms and Their Effect on HF Propagation
Author>Luetzelschwab, R. Carl - K9LA
Source>QST Feb 97, pp. 76-77
Abstract>Describes an atmospheric phenomenon that has some effects on radio propagation, but are probably never noticeable to amateurs.

Digest>K9LA's letter is a cogent description of an atmospheric phenomenon that affects radio propagation to some degree. The word: "stratwarm" is a contraction of "stratospheric warming". The stratosphere is the portion of the atmosphere that lies approximately between 30,000- and 100,000-feet above the surface of the earth. It has been discovered that sometimes, during the winter months in the polar regions, the air temperatures within those levels warm drastically. When this happens, it may start a chain of events that results in nitric oxide that tends to collect in the polar regions to move away from the poles toward the temperate zones. This tends to increase the absorption of radio waves in those areas.

The author analyzed the existing data to determine what effect, if any, stratwarms might have on the amateur bands. His conclusion is that it is unlikely that the effect would be significant, or even detectable.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:A "Thump Killer" Modification for KK7B's CW Transceiver
Author>Fifield, Dave - KQ6FR
Source>QST Feb 97, p. 74
Abstract>Describes a way to eliminate loud key clicks in the KK7B transceiver described in QST Nov 95.

Digest>KQ6FR offers a modification to the "Small, High Performance CW Transceiver" described by KK7B in QST Nov 95. KQ6FR found that loud key clicks were heard whenever the volume control was set higher than about one-quarter of full scale. These can be eliminated by the addition of a parallel pair of reverse-connected 1N914, 1N4148, or 1N916 clamping diodes across pins 1 and 2 of the NE5532 audio amplifier. This modification has no effect on normal audio.

He noted that, on his 40-meter version of the transceiver, there is substantial leakage of 12- to 14-mHz. signals through the receive filter. In an addendum to KQ6FR's letter, the author of the original article, KK7B, suggests that a simple Butterworth filter be designed into the circuit to prevent such leakage.

Title>HK2:Speaker-Mike Modifications to Generate a 1750-Hz. Tone Burst for European Repeater Operation

Author>Chidester, Dale H. - N3HAL
Source>QST Feb 97, pp. 74-75
Abstract>Some English repeaters require 1750-Hz. tone bursts for access. This describes construction of a tiny oscillator inside the microphone case to provide the necessary audio signal.

Digest>N3HAL traveled to England on business and obtained a reciprocal license to operate as G0/N3HAL. In using his Yaesu FT-470 dual-band HT to access repeaters, he discovered that some require a 1750-Hz. burst for access. He decided to add an oscillator of that frequency to his rig.

The best place that he found to locate the oscillator components was inside the MH-12A2B speaker-microphone. He built a miniature twin-T oscillator on a tiny piece of perf board and fastened it in the microphone case with a piece of double-sided foam tape. Later he realized that there is ample room on the existing PC-board that holds the speaker-mike to contain all the oscillator components. A schematic diagram and photograph are included. No separate source of power is necessary; a well-regulated voltage is already across the leads of the mike.

For actuating the tone burst, he mounted a miniature push-button in a hole he drilled through the top of the case. In operation, one must press and release the tone button to access the repeater, then press the PTT button in the usual way. The two must not be pressed at the same time, as the loading of the mike would shift the oscillator frequency out of range.

Title>HK3:Eye-to-Eye Antenna Connections
Author>Guillaume, J. B. - N5CPE
Source>QST Feb 97, p. 75
Abstract>Shows how to make temporary antenna-coil taps that will not be affected by exposure to weather.

Digest>Outdoor wire connections that must frequently be changed, such as band-changing taps, are subject to corrosion that may cause poor connections; hence, N5CPE does not like to use clip leads. Instead, he solders the wire ends into loops of 0.5-inch (13-mm.) inside diameter, then uses 7/16-inch (11.1-mm.) brass or stainless steel bolts and nuts to fasten them together under high pressure.

NEW HAM COMPANION (NH)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Feb 97, pp. 58-59
Abstract>Questions and answers of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: Novice callsigns; wall-plug cube power supplies; test equipment for amateur use; satellites that Technician-class hams can use; QSL bureaus; transoceanic air traffic control radio; log-periodic antennas; and other subjects.

Title>NHC2:Field Day from the Summit of Mount San Jacinto
Author>Aubert, Lorraine Y. - KE6WHJ
Source>QST Feb 97, pp. 60-61
Abstract>Field Day operation from the top of a California mountain.

Digest>KE6WHJ is employed as a seasonal ranger at Mount San Jacinto State Park in California. In the summer of 1996, she was assigned as the "back-country ranger" at Little Round Valley (alt. 9700-feet, or 2956-m.), a short distance west and 1100-feet (335-m.) below the peak of Mount San Jacinto. During the Field Day, June 22 of that year, she set up her battery- operated 40-meter QRP rig, and also operated her 2-meter HT during the contest.

This is the story of her activities. Her results on 40-meters were disappointing, she only made one contact; but on 2-meters, she made contacts all over California.

Title>NHC3:New Heights for ATV
Author>Suits, Bryan - WB8WKN
Source>QST Feb 97, pp. 63-65
Abstract>Wisconsin high-school students launch a rocket carrying an ATV camera that reached a height of 40- to 50-miles (65- to 85-km.)!

Digest>In this article, WB8WKN describes the launch of the Super Loki rocket by a group of students in the Wisconsin Rockets for Schools organization, a part of the Aerospace States Association's (ASA) Rockets for Schools program for 6th- to 12th-grade students.

The rocket was 11-feet (3.35-m) high. It included a solid-propellant-powered booster and an instrument "dart" containing the payload.

The payload included an ATV black-and-white camera, a microcontroller-based telemetry unit, a 440-mHz. transmitter, and a home-built power amplifier. The entire package was contained inside a fiberglass tube

only 1-5/8-inch (41-mm.) inside diameter!

All components were built on PC-board disks, either 1-1/2- or 1-5/8-inch (38- or 41-mm.) diameters. Three threaded brass rods, with nuts, were used to space the disks apart and in line. After the assembly was inserted into the tube, it was potted with urethane foam to hold it securely in place. Included, to be released at the top of the range, was a type of parachute called a "starute", that was to lower the dart slowly back to the ground.

When the rocket fired, it accelerated to as high as Mach 5 velocity within two seconds. Exceeding a vertical speed of 3500 mph, it reached its maximum altitude at 40- to 50-miles (65- to 85-km.) high within two minutes. As it reached peak altitude, an explosion shot the payload dart from the rocket at more than 100-mph, causing it to spin at up to 1000 rpm. During launch and the final explosion, the payload was subjected to as much as 250-Gs of force.

The payload was ejected successfully and telemetering was received on the ground, but the altimeter sensor failed, so the actual height reached is unknown. Also, the starute failed in its function, and the dart returned to earth in free fall, tumbling rapidly. However, the camera did work properly and many frames were recorded showing the horizon, Lake Michigan, and the shoreline.

Another such project is scheduled for 1997.

Title>NHC4:Wire Gain Antennas for 6-Meters
Author>Witmer, J. Robert - W3RW
Source>QST Feb 97, pp. 66-67
Abstract>Describes long-wire, colinear, and Sterba 6-meter beam antennas made from wire.

Digest>A piece of wire a half-wavelength long on 6-meters is only a bit over 9-feet long, so some of the fixed-wire beam antennas that are so commonly used by HF broadcasting stations can be built for this band within the confines of many home building lots. This article describes three of them: a long wire, a colinear array, and a Sterba curtain. Each produces bi-directional gain at right angles to the wire.

A long wire antenna is simply a straight piece of wire, cut to an integral number of half-wavelengths; the larger the number, the greater the gain that will result. A four-wavelength example is shown in a diagram. Such an antenna can most conveniently be fed at a current node, which means at the center of one of the half-wavelength segments. The diagram shows the wire fed at a distance of 1/4-wavelength from one end. The actual dimension in inches is calculated by dividing 234 by the desired resonant frequency in mHz. (1-inch = 25.4-mm.). A 4:1 balun is shown at the feedpoint, fed by 50-ohm coax.

The gain of a simple long wire is compromised by the fact that adjacent half-wavelengths resonate 180-degrees out of phase with each other. The

gain of the four-segment example is only about 3-dBd. Substantially greater gain can be obtained if the half-wave segments are all excited in phase, forming a colinear antenna. This requires a phase reversal between each segment, which can easily be done by a quarter-wavelength stub, made of ladder line with the wires shorted at the bottom end, inserted between each pair of segments. This is shown in another diagram. The quarter-wavelength dimension is calculated as described above. The feed arrangement is the same as in the long-wire example.

The Sterba curtain is a famous antenna; it is formed of two colinear antennas, one mounted above the other with half-wavelength spacing between. An eight-element version is illustrated. Each end of the top wire is connected to the corresponding ends of the bottom one by a single vertical wire.

In the center of each segment (i.e. one quarter- wavelength from each end and at intervals of one half-wavelength along the length) of the horizontal wires, where stubs would be located in a stand-alone colinear antenna, the stubs are replaced with a phasing line made of ladder line, one half-wavelength long, connecting between the top and bottom wires. Each phasing line is twisted a half-turn, so that the top-wire left segment is connected to the bottom-wire right segment, and vice versa. The 8-element Sterba should produce about 8-dBd. gain.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:MediShare International
Author>McShane, Tom - NW6P
Source>QST Feb 97, pp. 41-43
Abstract>Outlines the activities of a philanthropic organization of medical professionals that helps hospitals in undeveloped countries.

Digest>In this article, NW6P describes the Medical Amateur Radio Council (MARCO), which is an organization founded in 1965 among health professionals who are also hams. It attempts to promote good will, fellowship, and public service worldwide. An offshoot of that organization is MediShare, International, that provides medical equipment, supplies, information, and professional volunteers to work in hospitals in undeveloped countries, and also in disaster relief.

MediShare was created in 1989 by W6JZU, GJ0KKB, and 9X5KP. They met during the course of normal ham chats on the 15-meter band. During a chat, 9X5KP advised the other two that a small hospital in Rwanda urgently needed a part for their only sterilizer.

The American and the Briton volunteered to provide the necessary part, and the word of this spread through Marco. The result was that many members volunteered to provide similar help and the MediShare organization came into being. It has grown, and is now active in undeveloped nations throughout the world.

Title>GI2:The Collins 45A - How Arthur Collins Met Robert Goddard
Author>McElroy, Gil - VE1PKD
Source>QST Feb 97, pp. 44-46
Abstract>Robert Goddard, the rocket pioneer, held a key patent in early-day electronics. He helped Art Collins avoid patent difficulties when his company was getting started.

Digest>VE1PKD points out the surprising fact that the first US patent ever issued for an electronic oscillator went not to Edwin Armstrong, as is commonly supposed, but to Robert Goddard, the famous rocket pioneer. In 1912, when he filed for the patent, he was a graduate student and instructor in physics at Clark University in Massachusetts. He was very interested in electronics and radio, and was doing research on crystal detectors and properties of insulators.

Among the results of his research in radio were at least six patents that were issued prior to 1920. By then, the field of radio was in turmoil because of the vicious legal battles that were raging between industrial behemoths such as Westinghouse, General Electric, RCA and A.T.&T. Caught in the battles were individuals like Armstrong, DeForest, and other famous names in the history of the science. Goddard sold his patents to Westinghouse in 1920 and turned most of his energy into rocket research. But he never lost his interest in radio.

Meantime, Arthur Collins grew up in Cedar Rapids, Iowa. By 1931, he had formed the Collins Radio Company and was building radio equipment. His company, like all small radio companies at the time, encountered great difficulties when they tried to obtain licenses for the use of key patents from the major companies that held them.

In the course of building his equipment, he was sued by both RCA and A.T.&T. for infringement. For help in defending his company's position, he contacted Goddard, and a friendship grew up between them. With Goddard's help, Collins created a legal defense, and the suit dragged on for years. In the end, the court ruled in favor of RCA and found Collins to be infringing; but there was a happy ending to the imbroglio. After the decision, RCA and A.T.&T granted Collins a broad license to use the technology in exchange for a total payment of $1.00!

The reason for their action was not altruism; Goddard's information showed that he had been doing much work in the early years that bore directly on some of the claims in the later patents. If Collins had appealed the unfavorable decision to a higher court, it was entirely possible that he might have prevailed, and the result could have been that the later patents would have lost most, or all, of their validity. By giving him the license, the companies avoided further legal action.

Title>GI3:Are Radios More Expensive Today?
Author>Minney, Matt - N8PGI

Source>QST Feb 97, pp. 47-48
Abstract>Although many think radio equipment is more expensive now than in earlier years, the truth is that there is very little difference when prices are adjusted for inflation.

Digest>N8PGI, who has been licensed for five years, has heard a great deal of talk from old timers to the effect that modern radio equipment is much more expensive than was the case in former times. To check the accuracy of that concept, he checked the prices of various kinds of amateur gear in the 1950s, and also in the 1970s, to compare them with modern equipment.

To make the comparisons meaningful, he first had to correct prices for the different purchasing power of the dollar. He did that by using the figures of the Consumer Price Index (CPI). Then he selected mid-priced and mid-featured gear of each era, to compare. Recognizing that modern equipment has many highly desirable features that were not available in prior decades, he realized that his selections would be arbitrary; but he felt that the comparisons, while rough, would be illustrative.

He thoroughly documents his findings in the article, by citing specific examples. The conclusion is clear: there is not much difference in prices, after correcting for inflation. Whatever differences there are indicate that today's prices are lower, not higher, than in preceding times.

Title>GI4:Get Ready for Phase 3D! - Part 2
Author>Ford, Steve - W8IMY, and Lau, Zack - W1VT
Source>QST Feb 97, pp. 50-53
Abstract>Second part of this article. Describes equipment necessary to work the Phase 3D satellite.

Digest>In this second part of the article, the authors discuss the types of equipment, including antennas, needed to work the Phase 3D satellite on the 2-meter and 70-centimeter bands.

The satellite will operate in the following sub-bands, for the various modes:
Uplinks
Mode Band Digital (mHz.) Analog (mHz.)
V/U 2-meters 145.800-145.840 145.840-145.990
U/V 70-cms. 435.300-435.550 435.550-435.800

Downlinks
U/V 2-meters 145.955-145.990 145.805-145.955
V/U 70-cms. 435.900-436.200 435.475-435.725

The "deluxe" way to work these bands is with the use of an up-to-date multiband satellite transceiver, such as the ICOM IC-821, the Yaesu FT-736, or the Kenwood TS-790. These are multimode transceivers; they give full flexibility to operate any digital or analog mode, using any of the linking modes. However, any of them represents an investment of

$1400 to $1800. Alternatively, one could use separate single-band transceivers for the two bands required. Older units can often be found in the used market for as little as $250, each.

A third way, in case one already owns an HF transceiver, is to use converters to change received signals from the UHF/VHF to, say, the 10-meter band; and convert the 10-meter transmitter output to the respective UHF/VHF band. Converters are available from a number of sources in either kit form, or as completed units. The transmitter converters typically accept signals from the HF rig at power levels of the order of 0.1-watt. This usually means that the lowest output from the HF transceiver must be passed through an attenuator before driving the converter, to avoid "frying" it.

As for antennas, the kind required is a function of one's station environment. If the location is in the center of a large city, the ambient noise level at these frequencies is apt to be so high that a high-gain antenna is needed to receive the satellite signals with a signal-to-noise level adequate to make it usable. If, however, the station is located in a rural area, the radio environment may be very quiet and a much more modest antenna will likely give good results. In either case, the antenna should be circularly polarized, which requires crossed-Yagi elements.

Transmitter output power requirements are not high. If the antenna in use is a high-gain type, probably 10-watts output will be ample for either band. Even with a low gain antenna, 60-watts output should be adequate.

A final factor that must be considered is the feedline. At these frequencies, feedline loss can be severe if the line is more than a few feet long. One should not skimp on the cost of coax cable.

If relatively long cable runs cannot be avoided, one should consider a receiving pre-amplifier located at the antenna. This will boost the level of the incoming signal to compensate for cable loss.

As far as getting on 6 inexpensivly the Azden 7500H at about $300.00 is a nice FM rig. 50 watts beefy heatsink & fan. It does a great job. Mopdes, well everything you find on HF SSB, CW, FM, AM, RTTY you get the idea. I've worked a mobil in Newmexico last summer in FM. He was running an azden rig into a 1/4 wave. I my self like FM, when you have an FM contact you dont have to work very hard to copy it. Also, MFJ makes a nice little SSB/CW rig for right around $300.00. It does 10 Watts pep (Which believe it or not will work very well when the bands up). If I was just starting, and wanted to keep my cost down I'd go with the Azden rig. If later you decide you really want to stay with it, you could run the Azden mobil. And yes 6 will open right about NOW....l8r

Hi,

>From the B&W catalog, the taps are 7, 3.72, 2.34, 1.34, and 0.95 uH. The recommended capacity to resonate each band is 268, 144, 73, 48.5, and 36 pF. Suitable tube types for a pi network using this tube are 4cx1000a, and 2ea 3-400z. Plate load impedance range 1500 - 3000 ohms. Plate supply voltage 2000 - 4000.

Random groups testing would be likely deemed to be in violation of the secret codes and cypher provisions that we all must abide. Again I point out it is incongruous that Herman, being a professional operator, would advocate testing of a skill that upon the face of it would be illegal if transmitted on the amateur bands.

But I have to admit the arguement is moot because there is no good reason for Morse code testing in any case, so there is no point in belabouring this silly notion. Besides, Herman can only digest one thought at a time, more than that and he seemingly is unable to form a response.

> >73 and live better digitally

It may be true on the rf side but not throughout. No active hams
would keep putting cw reception on the wrong sideband for the amateur
band in use. Does anyone make a rig which does this one bit right?

True.

>Is there a reasonably economical way to get into 6 meters? Any
>recommendations on basic 6M rigs? Is the most common mode FM or are
>other modes used SSB / CW / etc??

Most distance contacts are of the SSB variety, but FM also
is used by some.

>Does 6M generally support reliable contact between the midwest and east
>coast? If so what sort of power is typically required for a contact of
>this distance?

6M is subject to band openings and does not always open. When it
does open, power, while helpful, is not the biggest issue. I have
confirmed contacts with Nevada and California during a field day
event and I was only using 50 watts (SSB) with a 3 element beam.

Yeah, you missed something. Morse testing is more analogous to
requiring everyone without an appendix to have one transplanted
in, even though, as you note, it serves no useful purpose. The
operation would pose some risk to the patient as well as being
painful and unnecessary. The primary rule of medicine is "First,
do no harm." Morse testing has become harmful to the amateur
service.

Contact Kenwood.
Ask for the manual for the IF232 interface for the TS-450 radio.
They will probably charge you $10 for this manual.
It describes everything you ever wanted to know about the interface.

If you want responses, leave your email address intact.

A lot of us just won't bother to reply if we have to spend
the time locating and editing that email address ...

Learned it, used it (a lot as KTN net control), still despise it as
archaic, slow, and error prone. It is a technique, like spark, whose
time has passed as something every HF amateur *must* know.
Let it go to the radio museum where it belongs.

You are really "one-track-minded" Bill, This is only a ham newsgroup
where somebody talks in a nostalgic way about maritime CW. In any case,
by 1999 all commercial ships on the seven seas will have to be GMDSS
ready with Inmarsat satellite com, DSC, EPIRB and Navtex. So CW is
definitively out of the maritime world. However, as a long-time sailor and
new ham hooked on CW, I try to promote the use of CW among yachtsmen,
only - as the French Canadians say - "pour le fun."

I checked with the League: the following is their reply:

Yes, Bruce, it's allowable so long as:

1. The VEs wish to allow it.
2. The VEs ensure that the Morse code copy is not saved to the hard
drive
(that is, it should only be saved to floppy--and the disk must be
relinquished to the VEs when the exam is over).
3. The VEs ensure that no spell-checking programs are activated.

It's in a way like allowing a typewriter to be used, accepted that it's
electronic. Over the years many people took tests with FCC using
typewriters.

The above is strictly up to the individual examiner.
I run ARRL tests and use the Farnsworth method.

and they
> never allow use of a laptop to copy code.

I'm not sure about this one. Generally when the code test is over and
the
examiner collects the paperwork, it includes the hardcopy. That way, he
can
check for the 1 minute of solid copy if need be. On a laptop, how would
they
do that with the needed integrity? I'll ask the league and
get their opinion.

Hello Everyone: I recently acquired an nice QRP station
from another HAM. HW-8, tuner, qrp wattmeter, speaker,
and power supply. This rig is outstanding in the 80/40
bands but somewhat less so at 20; Nothing at 15 Meters.

Using my pixie2 as a frequency spotter, I have verified
correct frequency readings on all bands but it is the only
thing I pick up on 21.120 MHz (3rd Harmonic of 7.040 xtal)
from my pixie2.

I have replaced the antenna connector (RCA) with a high
quality RF-type BNC. The old connector was intermittent.
Reception has improved slightly on all band, with an increase
in noise the only observation on 15 Meters.

I have a good compilation of articles regarding the HW-8 describ-
ing a sensitivity weakness at 15 Meters, but this is ridicul-
ous! It's gotta be better than this! I'm going to run thru
the unit with a commercial rf detecting probe tonight. (The
first 2 alignments I used a basic detecting diode as described
with the manual.)

I appreciate any help given.
TIA
-Ed Loranger

SB SPCL @ ARL $ARLX009
ARLX009 Hams continue flood relief assistance

ZCZC AX09
QST de W1AW
Special Bulletin 9 ARLX009
From ARRL Headquarters
Newington CT April 22, 1997
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 Hams continue flood relief assistance

Ham radio is helping out as major flooding of historical proportions along the Red River continues to overtake the cities of Grand Forks, North Dakota, and East Grand Forks, Minnesota. Most area residents have been evacuated into surrounding towns and emergency shelters. The Salvation Army has been assisting at many of the temporary camps and shelters, providing food and other necessities, and Amateur Radio has been providing an important link between various flood relief sites and a Salvation Army warehouse in Minneapolis.

ARRL Minnesota Section Manager Randy Wendel, N0FKU, reports that hams who live just outside the immediately affected flood zones have been helping local government officials with flood relief communication. Wendel reports that ARES, MARS and other members of the Amateur Radio community have been working together with the primary aim of assisting the Salvation Army and other relief agencies.

Wendel reports that one problem he's encountered is identifying hams who are available to help out. Some nearby areas have few or no hams, so some operators have volunteered to drive long distances to help out. When an HF link was needed between Salvation Army relief sites and the Minneapolis warehouse, a number of HF mobile operators volunteered to make the nearly six-hour trip to Minneapolis to assure communication.

Wendel also reports that many hams are among the flood refugees who have been forced from their homes by what's being dubbed ''the 500-year flood.'' Many homes have been damaged or destroyed, and the flooding was compounded by a fire in downtown Grand Forks.

North Dakota Section Manager Bill Kurtti, WC0M, and other hams in that stricken state are reportedly working with the American Red

Cross and in other flood relief efforts.

Wendel said the various ham radio groups involved in the relief effort have been working together well. The disaster has brought out many hams who had not previously been involved with emergency preparedness but suddenly found themselves in the midst of a major disaster--in some cases as victims themselves. He said this has served as a grim reminder that ''disaster doesn't always occur from the comfort of our ham shacks.'' Wendel said hams must realize the importance of ''having the capability to travel and set up a remote station at various locations.''

Fred Lehmann, WA0PBL, of Sioux Falls, South Dakota, reports that North Dakota hams were using 75 meters for flood communication on HF. He monitored KF0DI in Minot as net control for a session April 21 on 3937 kHz. Another net has been meeting on 3990 kHz.

President Clinton was scheduled to visit the flooded region this week to survey the damage. Wendel said he expected flood relief efforts would continue for several more weeks.

Make sure the band is really open before tearing the rig apart.

Even without a law change, one must still defend oneself if a neighbor
however wrong decides to sue you as a public nuisance. The cost of
such a defense can be expensive and there is no (little?) assurance
that you'll be able to recoup your legal expenses. This is besides
the emotional expense for which you can't be reimbursed. Would sure
be nice if consumer electronics gear had a little more immunity
to RFI to prevent this from happening in the first place!

--snip--

I wonder if the arrl is suggesting that enforcement of FCC law
should now be their (the arrl's) responsibility? Being a SWL who
has listen on ham radio freq's like 75 meters, I'd say that they
are asking for trouble. What happens if an over-zelotlous ham decided
to go on someone's property, acting as a "radio cop" and confronts
someone. I'd say that the property owner may have just hit the
lottery, as the owner can now take the radio-cop and the arrl
to court for harrassment and clean their clock. It's been successfully
done in other non-radio instances, and I know of 2 (vulture) lawyers
who would jump on someone acting as a non-certified enforcement
representative of a publishing company (who is also tax exempt) like
white on rice. Case in point, in my town about 18 years ago, someone
who claimed to represent "the FCC" and was part of a REACT group
attempeted to "serve a notice of violation" to a known CB'er who was
running power. Sure, the CB'er was wrong, but he just went about quietly
collecting all the documentation from the "volunteer radio posse", then
took them to court and won a *3 MILLION DOLLAR* claim against the
"CB-volunteer-police"! Wonder if the ARRL has that much socked away
to be lost the first time they are taken to court as an accessory to
harasment...? I don't defend the CB'er, but best to leave enforcement
to someone who wears a badge, else, your asking to have your clock
cleaned financially. Just an opinion.

:for a Pi Network, Looks like 5KV or better. Would like to know the
:rating and the inductance at the taps. This unit has a built in rotary
:switch to change taps. Thanks for the help N1DVE, Jacqui

These are really nice units. They could easily run at 5kW. I think B&W is extremely conservative in their power ratings.

I ordered mine for an 8877 linear back in 87. Took them a few months to deliver, mainly because unit was at plating shop for so long. But was worth wait. Think I paid about $120 for it back then.

They also sent along extra switch hardware and contacts. A real class act.

But, don't do what I first did before I decided on B&W: I bought one of those silver plated roller inductors using spiraling rectangular conductors. Insulation was lucite or plexiglas. On 10m the insulators started to bubble and explode like fire crackers. It might work for antenna tuners, but not in amp tanks.

Rob.

>multi-megawatt ERP of some TV transmitters and it doesn't look all that
>big.

Guys and Gals,
I'd almost support a 100 watt limit if it was world wide. Only on
160, 80 and sometimes 40 meters have I found it all that necessary to run
more power. That is under average conditions, QRM from pileups and contest
excluded. Can anyone deny that 20 meters wouldn't be better if everyone
was limited to 100 watts? But, it isn't going to happen. Look at CB radio
and their power limitation. Nobody can make it work cause their will be
people who always run more power and do not care what the rules say.
Don't think ham radio mentallity is any different.
As for what to do about neighbors who want to shut you down, sure,
try and get on there good side by doing what you can to protect them from
interference. Even if you have to buy hi-pass filters or phone filters
for them. Do everything you can to try and resolve the interference
peacefully. And if they still try to shut you down, SUE THE HE** OUT OF
THEM!
How many times has the ARRL gone before congressional committees
to try and get legislation that would require manufacturers to protect
consumer devices with adequate EMI filtering? Has any of that done any good?
Maybe hams could sue the manufacturers for not protecting there equipment
from legal RF radiation. And what about the radiation they put out when
they are not licensed transmitters? Broadcasting dimmer light switches
are a violation of they law aren't they?
You say nobody cares? You're right, the laws are on the books
but the government don't enforce them.
The only thing the FCC seems to be capable of now days is issueing
and renewing licenses quickly. God, we've come a long way!

///PAY TV DECODER PLANS///

MATERIALS REQUIRED:

1 - Radio Shack mini-box (#270-235)
1 - 1/4 watt resistor, 2.2k-2.4k ohm
(RS #271-1325)
1 - 75pf-100pf variable capacitor
(Hard to find)
2 - F61a chassis-type coaxial
connectors (RS #278-212)
12" - No. 12 solid copper wire
12" - RG59 coaxial cable

///INSTRUCTIONS///

1. Bare a length of No. 12 gauge solid copper wire and twist around a 3/8" nail or rod to form a coil of 9 turns. Elongate coil to a length of 1 1/2" inches and form right angle bends on each end.

2. Solder the varible capacitor to the coil. It doesn't matter where you solder it, it still does the same job. The best place for it is in the center with the adjustment screw facing upward

Note: When it comes time to place coil in box, the coil must be insulated from grounding. This can be done by crazy-glueing a piece of rubber to the bottom of the box, and securing the coil to it.

3. Tap coil at points 2 1/2 turns from ends of coil and solder to coaxial chassis connectors, bringing tap leads through holes in chassis box. Use as little wire as possible.

4. Solder resistor to center of coil and ground other end of resistor to chassis box, using solder lug and small screw.

5. Drill a 1/2" diameter hold in mini-
box cover to permit adjustment of the
variable capacitor from the outside.
Inspect the device for defects in
workmanship and place cover on mini-
box. Tighten securely.

6. Place device in line with existing
cable on either side of the coverter
box and connect to television set with
the short piece of RG59 coaxial cable.
Set television set to HBO channel.

7. Using a plastic screwdriver (non-matalic)
adjust the varible capacitor until picture
tunes in. Sit back, relax, and enjoy!!!

Well, I was wrong, ARRL will let one to use a laptop
to copy code, at the testers option.

However, every ARRL test session I've gone to didn't allow
laptop use. Every W5YI test sesssion did allow laptop.

Maybe luck of the draw on my part, or ARRL testers are
more strict than W5YI ... in general.

>
>I have heard stations calling "CQ AU", on CW at around 144.188 MHZ.
>I think that this is sattellite work, but I am not sure.

I would assume they are looking for signals bouncing off the auroral curtain. One of the ways to detect aurora in the evening is to listen for wavering signals on a band such as 80M. Then go up on 2M, aim the beam to the right or left of due N, and listen around.

Working cw off the aurora is a spooky feeling, and frankly, quite a deal, considering how far you are talking and how long, oftentimes, you can talk. When the cw signal begins to contain signs of a pure tone, you say your goodbyes real quickly and sign with the station, since it is an indicator that the signal is then ceasing to find an auroral curtain to bounce off and is beginning to come in direct, which in most cases, will not happen.

Many a time I have had conversations with stations in the midwest and far west from my Syracuse NY location. Now there is one thing one can do that cannot be done using radiotelephony or any digital mode other than the code. You will need a beam and a good 80W or so output on 2M CW to pull this off, assuming the aurora is active.

Visible aurora may not occur in perfect synch, if at all, at the time the auroral effect is discernable on your radio receiver. I did research on the auroral effects on VHF radars, and that enhanced my fascination with the fact I could put my knowledge of where the auroral activity was most likely to be, and how far away, in working a ham on 2M.

Once you make such a contact, it will stick in your mind forever, code addict or not. It is just plain, for the want of a better word, spooky (and fun).

Best regards - Fred Adsit NY2V

If you went to a zoo armed with a shotgun, the animals all being behind cage, the animals were chained and you shot them one by one would that be called hunting?

What do we call that in HAM radio?

We call it DX hunting via the DX Packet Cluster.

Am I missing something?

In the 7 years of having callsign plates, I have yet to find 1 person,
other than an amateur of the family member of an amateur who knows that
they are call sign plates.

>

Brash assumption at best. You should know you can cause massive
interference without a linear as well

This was not the case here. It is a case of a neighbor who is not
willing to work with an amateur so that all parties can co-exist

Besides, what makes you think he does not think you are a CB operator??

Much as I disagree with the idea of random group testing, I will
note that I see no conflict with part 97 if such random group
testing is strictly that (i.e. never on the air). The secret
codes and cyphers is only for on the air transmission.
Even at that, if what is sent on the air is known to be
random groups and characters for code practice purposes
between two hams, that too wouldn't (IMHO) be in violation
of part 97 since there is nothing in the sense of secret codes
being used.

Hello,

I am in need of assistance in getting APRS going on my PC. I have downloaded and installed winaprs version 1.4. After entering all the required parameters and opening a port to the TNC, I am receiving the packets on our local APRS frequency of 145.79 but no stations are displaying on the map, except mine. My TNC is a MFJ 1270b.

Can anybody help?

Thank-you,

Jim.. WA5VPW..

it's generally accepted that you can't make after the fact rules. if you had to have everything up to the latest standards or not operate, there'd be no transportation running at all -- planes, trains, ships or automobiles..

the old stuff has it's support network until the cut over date. some ship owners/operators are penny wise and pound foolish. some aren't making enough anyway.

remember, they've been trying to kill aircraft ADF navigation for something like 40 years now...

> >Fred Maia, W5YI on the CW requirement.
> >Hear it live on the Ham Radio & More Show . . . .
>
> How fast will Ms Kott be sending?

What a GREAT idea, Don ... since OOK Morse ("CW") is SO
superior, Ms. Kott should present her arguments entirely in that
mode ... while Mr. Maia should be constrained to speaking normally.

They must each have a strictly-enforced, equal amount of time
to present their arguments. (anything else would be unfair)

Pro-code respondents should likewise be required to present their
supportive comments in Morse-encoded tone patterns, while those
supporting the removal of all code testing should, like Mr. Maia, be
forced to speak normally.

Respondent's times should also be limited to equal, strictly-enforced
amounts of time ... after all the show's total air time is finite and we
must be fair to all participants, right?

I think that this is a WONDERFUL way for the radical Morse fanatics
from FISTS to dramatically present their case on how vastly superior
Morse is to all other means of communicating with others ...

Thank you, Don, for such a brilliant suggestion!!!!!!!!!!

: weather there are enough new hams licensed to keep the hobby going, and
: from the prospective hams, how difficult the present process is. Rarely
: do I hear what, for me, HAM radio is mostly about, communicating. That
: requires knowledge and courtesy!!!!!

I believe that there are actually more hams now than ever. It is just the ham/world population is decreasing rapidly. You also don't hear about it much in the media. That's why a lot of people don't know what ham radio is. It isn't shoved in their face on the news, and at other times when people aren't watching the TV or reading a newpaper or magazine, they are too busy to care.

: Even though I will catch some flack, since no code went into effect
: there have been some lower grade amateurs entering the hobby. No sir, I
: did not say that all no coders are bad hams, I know many who are
: electronic types who never wanted to bother with the code. But there
: are also some no brainers who can simply memorize a few questions and
: really don't get the point of the hobby.

I agree, even though I am (currently but not for long) a no-coder. Some of my no-code friends are exactly that way. They don't care what operating procedures are, don't care if an antenna only resonates at a certain frequency, stuff like that. That, IMHO, is some of the most important stuff in ham radio, technical standards and operation protocol. For me and some other hams, the no-code qualifications were just a jumping of place into the hobby. I haven't been in the hobby long enough, but I'm certain that there were low grade amateurs in the hobby before there were no-coders. Some people that are no-coders think that since Techs have the same priveledges as most other hams on VHF and above, why bother with the code. True, VHF is pretty cool, but the propagation properties of HF rock! Personally, I can't wait til the semester is over so I can beef up on my General, Advanced and Extra theory, and get my code down go so I can go get my Extra. The only things holding me back are my class schedule and work, otherwise I'd have at least an Advanced.

I pull into the driveway of a house for sale...
Neighbor noticed my ham plate.
Neighbor comments to the effect of "you're not putting up ANY antenna, boy".
This in turn leads me to wonder two things:
1: Why is this gentleman so anti-hamradio?
2: Who is responsible for this???

Dollars to donuts it was someone running a linear amplifier, with no concern
for his neighbors.

You know like it or not soon it will be good by code or good by ham radio.

In 30-40 years how many of the 50-60 year olds running ham now will be alive??
Yes not many.
And in 30-40 years how many 16-30 year olds just getting into ham now will be alive.
Yes quite a few.
But how many hams will their be in 30-40 years...
Not many.
New hams are not becomeing new hams because of the code....
So I guess the question is how many hams will be left in 30-40 years??
Not many.

Well Bry,

What about those who have learned it and don't feel they are missing much by not using it any more?

No one is trying to destroy CW, unless you subscribe that if it was taken off life support (mandatory fast code testing) it would expire.

Nuff said Jerry

Sorry to say but that is not necessarily the case at all. As the FCC
has documented, there are many phones on the market that receive RFI
from a 5-8 watt transmitter. My 100-150 watt VHF+ operations tore
up the phones, radios, TVs, and supposedly garage doors of nearly 10
neighbors (if they can be believed and didn't perjure themselves
in a public hearing.) After upgrading (and losing my petition), I find
that 1500 watts on HF causes fewer problems than 150 watts on VHF+.

The only humorous part of my experience was the incredibly irrate phone
message left on our answering machine from a busy body several blocks
away. She accused me of interferring with her phone conversation at
a time of a personal family crisis and went to great lengths to
chastised me for causing her additional grief. Unfortunately for her,
I was in NH on vacation when this was supposed to have occured.. :-}

Yes, you may have amateur radio equipment in your auto which
is incidentally capable of receiving public safety frequencies.

It might not hurt, however, to go to a public library and photocopy
the statute, just in cast you run up on a law officer who is not
familiar with that exemption. Also, carry a copy of your license to
validate your status as a federally licensed amateur.

Message-ID: <335E9308.6079@blueriver.net>
Source record: 199691

OK now.... I have a 10 meter rig that is really nothing more than a big 11 meter CB. It is a Ranger RCI 2980 base station. I want it to cover the 10 meter band -- the whole thing! All the way up to 29.700 because when I get my General ticket I want to be able to use it!

How is the best (right) way to modify this radio to the 10 meter band?

What if I wanted to go down to 12 meters?

Is there a way to make it cover 10 11 and 12? Probably not without retuning each time huh.

Well, someone let me know what they think. I am familiar with such kit as the Expander 120 and 160 and have used the 120 for a channel conversion on the Cobra 2000. What do you all think?

This might also be a graph of "number of hours of shortwave broadcasts" or "number of AM radio listeners in North America", etc.

There are many changes going on which are part of a larger trend away from traditional uses of radio (both domestic and international, commercial and hobby, etc.)

Those of us who love the mysteries of HF Radio should start putting out minds to how we might preserve our interests over the next 20 years.

Your post wasn't an obvious nostalgia piece and my
comments to it were simply to eliminate any chance we'd see
the event chronicled as another reason that all hams must
keep learning CW. That might make me one tracked, but
it is a necessary requirement to keep facts straight in this
newsgroup.

> In any case,
>by 1999 all commercial ships on the seven seas will have to be GMDSS
>ready with Inmarsat satellite com, DSC, EPIRB and Navtex. So CW is
>definitively out of the maritime world.

Agreed.

> However, as a long-time sailor and
>new ham hooked on CW, I try to promote the use of CW among yachtsmen,
>only - as the French Canadians say - "pour le fun."

And you'll never hear me say that you shouldn't.
If you enjoy CW and want to encourage others to
use CW, that's great...but that's certainly not the same
as saying every ham MUST learn CW as many others want.

Cheers and enjoy,

there was just a show on in-fisherman about carp fishing. they were using a mixture with wheaties in it(no kidding). they were also using corn. tnn usually replays sunday's show the following saturday sometime. check your tv guide.

1599. Pentium 75 MHZ loaded

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: Burt Fisher <burt@rocketmail.com>
Message-ID: <335EA1A4.401@rocketmail.com>
Source record: 199700

Pentium class 75 MHZ Computer for Sale

AMD 586 (equivalent benchmark to a Pentium 75 MHZ), mounted on a PCI Bus,
Vesa Local Bus and ISA bus motherboard. Includes controllers for drives on motherboard. Four ISA slots (one Vesa LB), Three PCI slots, 16 MB memory on 72 pin SIMMS with two more empty SIMMS slots, 256K high speed cache.
PCI Daytona Trident 9680 video card with 2M VRAM

Mini tower case. Mitsumi Win 95 104 keyboard. Artec mouse

4X CDROM, sound card and speakers setup to play audio CDROMs, MIDI, WAVs etc.

Aspen 33.6 Kbps F34PVS Fax modem WITH Simultaneous Voice and data, caller ID, voice mail, speaker phone. Setup with Netscape Gold 3.1 running on the internet.

Hard drive is 540MB loaded with Windows 95, Norton Utilities 2.0 for Win 95, Cleansweep 95 and much more.

Documentation and drivers included for motherboard, modem, CDROM, mouse, video card.

All components NEW.

$700 plus $10 shipping in U.S.

It is an unmodulated carrier so one must be in a BFO mode(eg usb or
CW) to notice it. Sometimes I'll have several radios tuned to
different GHFS freqs and will hear the chirp as it goes by each one in
turn. In fact, this is how I figured out that it was a sweep. What I
want to know is what is the gurgling water sound?

Russ, one "trick" you might try is to put a DSP with pseudo COR output on the TS450 audio to simulate COR. JPS in Raleigh has such a mod for a little more than the price of their amateur product (high $300's) and you get DSP audio filtering as well.

You might also look at the Link Communications Controllers, They have TTL logic output on each radio port (one direction - to radio) to talk to the Kenwood directly without an interface.

Good luck, John

I'm running a contest that gives away free logging software !

We have a winner for APRIL in the Log-It v5.0 Logging Software

giveaway ...

It is : Drayton - KF4AME Miami, Fla.

You could be the May winner by submitting your name.

The website has lots of other neat stuff too ! Like links,

shareware downloads, and more.

Try the CHAT SHACK while you are there. Get some friends together

and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

Let me cast a vote for the SGC-230 tuner (about $450 from HRO). I
used it with my IC-706 during the Pacific Cup sailing race from San
Francisco to Hawaii last year. Once installed, it's just about
fire-and-forget; no need to push buttons to initiate tuning; and I
didn't even bother to install a "TUNED" indicator -- just watched the
SWR drop. It tuned my 23-foot marine whip on 160 to less than 2:1
SWR. (No assertions about the radiation efficiency of this
configuration, though!)

It's well-built for the outdoor environment and works very well with
the 706 in my experience. I chose it over the available Icom tuner at
the time.

Regards,

Mark
K7MPH

1612. Discussion on Sunspots and Earth Climate

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: Mike Flaugher N9LLX <flaugher@thepoint.net>
Message-ID: <01bc5025$a70584a0$86a2f6ce@flaugher.thepoint.net>
Source record: 199713

Greetings,
I'd like to get a discussion fired up so I'm going to throw something out to the group and just see where it goes. The subject is sunspots and solar interactions with Earth's climate/weather systems.
First of all, I'm a ham radio operator and, by profession, an electronic technician. I find the whole area of sunspots and earth-sun intereaction absolutely fascinating. I eagerly await each new development in our understanding. I am, however, by no means a professional researcher or scientist. But in a way that's helpful because my interest is strictly as a hobbyist and I feel free to go to any source for information and explore any new idea.
Anyone who reads this has surely heard of 11-year sunspot cycles. By what I'm reading, researchers now seem pretty assured that two of these cycles are each half of a 22-year solar magnetic cycle. The sun is in effect like a huge dipole with a more or less regular oscillation period. During solar minimum years we can even measure the amount of solar flux seen in coronal holes and activity below the sun's surface and make rough judgements about the strenth of the upcomming cycle, rather like measuring the charge current on a coil then estimating its fully-charged voltage 90-degrees later.
A very interesting paper on this phenomena and the new "solar dynamo" theory has been put out by scientists from NASA Goddard Space Flight Center and Yale University (Schatten, Myers, and Sofia). Their paper is still in scientific journals (not the mass media) but you can see the reference to it from the American Geophysical Union at www.agu.org/pubs/gl_23_6.html. To be sure, not everybody agrees with these new theories nor the Sofia-Schatten model, but I have a gut feeling they'll be proven out.
Again, I'm a hobyist not a researcher so I can have my opinions without being called to task for misrepresenting some organization or agency.
Like many hams, the sun-climate connection is something that's been talked about many times, at least until the new theories get discounted. It's like everybody knows there has to be SOME connection but no one can put their finger on it or prove a good case. This time the evidence seems pretty compeling now that we have a better handle on Earth's climate past, that is, now that we've started analyzing tree ring and ice core data on the decade level rather than longer time intervals.
These records suggest what some climatologists have long believed--that Earth goes through regular periods of scrambled weather patterns about every 160 to 200 years. Some of the more potent periods in the past may have played a part in historic events such as mass migrations and even the demise of civilizations. Consider the Anastazi Indians who fell to the droughts of the 13th century in America, or the Harappan culture in India which was weakened by severe flooding before 1500 BC then subjected to invaders from the Steppes who fled crop failures and shrinking animal

herds. Indeed many of the peoples who moved into Europe and Asia c.a. 2500 to 1500 BC may have done so because of climate conditions. Even the assault of the Barbarians on the Roman Empire around 500 AD may have been due in part to a sharp decline in solar activity which led to difficult weather patters in the North. In my opinion, the smoking gun is smoking enough that historians need to take a closer look at this.

Obviously we do not have direct correlation between sunspot cycle intensity and climate changes of the past. We do see declined cycles in the early 1800's and also during the Maunder, but to go further back we need something like a correlation between sunspots (solar output) and isotope (carbon and iridium) concentrations. This may now be worked out and it's just a matter of getting everyone to accept the results.

Unfortunately, there appear to be many in the scientific community who resent this new science because of damage it might to to what is already accepted. Of course I'm speaking of environmentalists who, through perhaps through no fault of their own, have devised the formulas which have brought the fear of global warming. A good many of these formulae assume the sun to be a constant; a fixed value. To accept solar variability would be to have to re-work the formulas and, perhaps, loose the proof that man is causing global warming. Solar intensities HAVE been increasing for the last 200 years and indeed seem to continually increase between periods of solar quiescence. Quite a lot is at stake when one considers the regulations and restrictions enacted by countries around the world at the behest of organizations like the IPCC (Inter-Governmental Panel on Climate Change) and also the very large amount of research funding that has been let out. It's not hard to see where the environmental industrialists could view solar variability as an upsurp or "competitor" theory to be defended against. I think also that some scientists simply have an adversion to "natural forces" altogether. For a look at how many organizations are involved in global climate change, check out http://www.worldcorp.com/dc-online/gcc/science.html.

So now let's throw one more log into the fire. Since about mid-1994, it seem to me that solar output has been dropping and Earth's weather has been affected. I say this partly from my own observations of solar flux values (I get my data now from http://dxlc.com/solar/) and observations of the natural world. Growing up in the Texas Panhandle, I am aware of the regular 22-year drought seasons in the southwest. The next season should have started about 1998 but instead began in 1994. I've also noted that migrations of geese and ducks on the flyway over Indiana have come later and later each year. And I also believe there must be some connection between solar levels and the unexpected cooling of surface water temperatures in the equatorial Pacific which has been at least partly responsible for the strange storm tracks of late and so many record highs, lows, floods, and droughts worldwide. The National Climate Prediction Center (good guys at NWS) has predicted the start of warming anomalies this year while at the same time their latest and greatest computer model LDE02 actually predicts continued cooling. That model as of now is being officially "ignored" because the older three are in agreement. I guess we'll see, eh? To find out more about El Nino/Southern Oscillation and North Atlantic Blocking, try

http://www.pmel.noaa.gov/toga-tao/el-nino/home.html.
One group who seems certain that our sun is indeed variable is the H-K Project at Mt. Wilson Observatory at http://www.mtwilson.edu/Science/HK_Project/. Click on "Extra-Cyclic Activity". Their observations of other stars of similar class to our own indicate that most if not all go into periods of relative quiescence and then return to normal. The statistics suggest that our sun, if it is normal, should spend about 1/4 of it's time at a lower output state than we've known these past two centuries. The Carbon-14 record seems to bear this out. Hmmm.
My belief is this: I think there IS a possibility, although not proven, that the sun has been primarilly responsible for global warming, and furthermore we MAY (as of 1994) be entering already into another period of solar decline. There are certainly varied optinions about what cycle 23 will be like, more that I've ever noticed before. If cycle 23 is the downturn into a solar minimum event, we will not know for certain until we see at least the next cycle, number 24, which won't begin until 2008 or so. And if the 14-C record is to be believed, the actual climate deterioration will progress gradually for perhaps 30 years as in the early 1800's, or even up to 80 years as during the Maunder Minimum or 100+ years as during the Sporer. I cite these figures based on when Carbon-14 concentrations made a general downturn until they hit bottom and turned upward again.
Well, there it is. To me, all of this makes for truly fascinating and exciting science. Many elements are involved; cutting-edge technology, new theory, the demise of older accepted norms, and even perhaps intrigue within the scientific community. What will emerge when all is said and done? Stay tuned.
By the way, one of my favorites for general solar background, and a good look at sunspot "butterfly" patterns is www-solar.dcs.st-and.ac.uk/~alan/sun_course/Introduction.

A person I correspond with on the net nowadays has this interesting caviat to his e-mail (hope you don't mind, Jim)

"The reality of the Maunder Minimum and its
implications for basic solar change may be
but one more defeat in our long and losing
battle to keep the sun perfect, or if not
perfect, constant, or if inconstant, regular..."
John Eddy, solar physicist

: Hi Gang,

: I am seeking to understand the world of 50 Mhz.
:
: Is there a reasonably economical way to get into 6 meters?

Yes. Ten-Tec has a kit for a 6 meter transverter. They have two models, the first is 20 meters to 6, and the other is 2 meters to 6. So if you already have an HF rig, get the 20 -> 6 model, and if you have an all mode 2 meter rig, get the 2 -> 6 model. Either kit costs $100. The kit contains the circuit board, all components, an enclosure, and all hardware. It accepts 5 to 10 watts input, and has an 8 to 10 watt output.

(Note: I have the 20 meter version, and a stock HF rig will only transmit from 14.000 to 14.350 MHz which only allows one to work 6 meters from 50.000 to 50.350 MHz. This is fine for SSB and CW work, but is lacking for FM work. I modified my HF rig to transmit everywhere, so I can transmit on 16-18 MHz and work FM on 6 meters from 52-54 MHz. I think all the 2 meter all mode rigs work 144-148 MHz, so they will cover 50-54 MHz with no problems.)

1616. Lithium leaking in 850???

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <335E8899.3F6C@electronicinstrument.com>
Source record: 199717

One of the local boys that repairs ham radios (ex-Ham Radio Toy Store 630-668-5688) stated he was working on an 850, about 4 years old, or so, and he stated there was a problem where the lithium battery leaked, and destroyed the board. I won't blame Kenwood, but there seems to be a problem with the supplier to Kenwood. Has anyone else out there seen this? To circum vent this problem can we just place saran wrap around the battery? Will lithium eat through the saran wrap? Any ideas??

Let's see, tha instead of that, thier instead of their, vist instead of visit. Seems your nose is so far up you can't see to spell correctly.

1618. ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: nejeh@gdi.net
Message-ID: <5jmd2f$65g@news.gdi.net>
Source record: 199719

Please take the time out to read this email. it is worth your time.

ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!
Or send a message to millions of people...

NOW YOU CAN ADVERTISE FREE AND GET DRAMATICALLY
MORE RESPONSES THAN ADVERTISING ON NATIONAL TELEVISION

With E-mail your potential customer is forced to read at least the
headline of your letter. Unlike TV, magazines, newspaper ads, and
direct mail where more than 99.99% of the recipients will skip right
over your advertisement.

TURNS YOUR COMPUTER INTO A CASH REGISTER: Conservative estimates indicate
well over 100 MILLION people will have E-mail accounts in the next year!
E-Mail Blaster turns your computer into a cash register by giving you FREE,
immediate access to all of them. Do you think some of the more than 100
million people with E-mail addresses would be interested in your products or
services? Even if you don't have your own products or services you can
still make money buy promoting our computer software!!!
You can make money with our new software called E-MAIL BLASTER

Here's how:
* By Using E-Mail To Sell Your Products & Services
* By Using E-Mail To Sell our Computer Software such as: Email Blaster, Web Walker,
Email Lock Box etc.
* By Renting or Selling Your E-mail Addresses
* By Becoming A Distributor for e-mail BLASTER

MUCH FASTER: With bulk E-mail you get responses back in 1 to 4
days instead of waiting weeks or months like with television or print
advertising. You can begin filling orders the same day you send E-mail.

FREE ADVERTISING WORTH MILLIONS: It costs millions of dollars to mail out
millions of letters using the United States Postal Service! Now you can
send your ad to MILLIONS of people for FREE using E-Mail BLASTER

E-MAIL BLASTER IS ACTUALLY 3 PROGRAMS IN 1: E-Mail Blaster is amazing new
technology and the most advanced bulk E-mail software on the market today.
(1) E-Mail BLASTER automatically extracts E-mail addresses from America
Online, CompuServe, Prodigy, and the other online services, the Internet,
web pages, news groups, and hundreds of other sources. (2) E-Mail BLASTER
automatically stores the E-mail addresses in your computer along with
keywords that describe hobbies and interests to created highly targeted
E-mail addresses. (3) E-Mail BLASTER sends your marketing letter or ad to
MILLIONS of targeted E-mail addresses at the push of a single button!

HOW DOES E-MAIL BLASTER WORK? E-Mail Blaster has dozens of special filters to automatically harvest E-mail addresses from major online services such as: America OnLine, Compuserve, Delphi, Genie, and of course the internet.

AOL AUTO EXTRACTOR: E-Mail Blaster has many special features like the AOL Auto Extractor that let's you use a regular dial-up Internet connection to collect names and addresses from America Online. Collect America Online addresses without being a member. Allows you to download names and addresses from America Online without paying membership fees or online charges. Auto Extractor for all of the online services and Special E-mail database search engines will also be available at no additional charge.

SIMPLE TO USE: E-Mail Blaster does all the work for you. Unlike other programs where you must cut & paste addresses, E-Mail Blaster does it for you automatically. And, unlike other E-mail programs, with E-Mail Blaster there is no need to purchase any additional software

SPEED: Your time is important. E-MAIL Blaster is DRAMATICALLY FASTER at extracting and sending E-mails than all the other programs on the market that we tested it against.

NO SPECIAL EQUIPMENT NEEDED: E-Mail Blaster runs on a PC with Windows 3.xx Windows 95, Windows NT, a 386 or faster processor, 4 MB RAM, and a hard drive with at least 10 MB free and your own SLIP or PPP connection. No other software needed. Also runs on a Macintosh with Soft Windows installed.

****
This message was sent using E-Mail Blaster.

E-Mail Blaster is The World's Leading Bulk E-mail software.
With E-Mail Blaster you can advertise to over 100 million people for FREE!

Cost: We are giving away Email Blaster your only cost is $165.00 License fee.

THAT'S IT!!!

Our company is in the software business of developing cutting edge products, so we know if you have the opportunity to use our software FREE you will be our future customers. We know we need you to make our software business a true success!

(Please if our lists are incorrect put "remove" in the subject and just hit "REPLY" and you will not be bothered again. Please forgive our mistake).
****
****
To take advantage of this opportunity, please fill out the order form below and fax to 1-407-380-3545. Don't miss out on this opportunity! Sales Rep: (Nejeh Yusuf @ 407 380 3545)

Name: _____

Address:_____

City:_____

State:_____

Zip:_____

Telephone::_____

E-Mail Address:_____

#of Copies @ $165.00 each _____
If you would like to run Email Blaster on multiple computers or if you would
like to resell Email Blaster for up to $499. you may purchase additional copies
of Email Blaster for only $165.00. Retails for $499.00 This price is only available
at the time of this order! So, Take advantage now and reserve your additional copies now!

****
WE DO ALSO ACCEPT CHECKS BY FAX AND PHONE. WHY WAIT WHILE YOU CAN GET AHEAD.

>someone. I'd say that the property owner may have just hit the
>lottery, as the owner can now take the radio-cop and the arrl
>to court for harrassment and clean their clock.

The ham yes, the ARRL? why? Unless the ARRL was actively
instructing hams to trespass, I see little chance of success on
sueing the ARRL under the scenario you describe.

> It's been successfully
>done in other non-radio instances, and I know of 2 (vulture) lawyers
>who would jump on someone acting as a non-certified enforcement
>representative of a publishing company (who is also tax exempt) like
>white on rice. Case in point, in my town about 18 years ago, someone

>collecting all the documentation from the "volunteer radio posse", then
>took them to court and won a *3 MILLION DOLLAR* claim against the
>"CB-volunteer-police"!

Sounds like the REACT group was way off base in doing what
they did. By the way, I'd bet React has no money anyway.

>Wonder if the ARRL has that much socked away
>to be lost the first time they are taken to court as an accessory to
>harasment...?

Again, unless it can be shown that the ARRL was telling people
to do that, I see little liklihood of success. Happily, ARRL does
have its own counsel to advice on procedural efforts that might be

used. I'd bet they'd include a strict statement against any and all
actions that the CBer did. After all, the CBer IMPERSONATED
an FCC official, TRESPASSED and who knows what else.

> I don't defend the CB'er, but best to leave enforcement
>to someone who wears a badge, else, your asking to have your clock
>cleaned financially. Just an opinion.

But gathering evidence isn't a problem as long as rights are
recognized. DFing a transmitter, taping malicious interference,
taking signal strength readings, etc. all can be done without
harassing anyone.

You are legal for two reasons:

1. Federal premption by the FCC several years ago for all amateur
transcievers and
2. The Kentucky law added an amateur exemption several years ago.

>>mini vessel.

>Ever been to sea, Bill? Ever seen a 50 foot swell (crest to trough)?

Been there, done that. So what? The ship sounds like an
embarrasment in terms of being properly outfitted in 1997.

>Now imagine a 70mph wind blowing; the crest of that swell will now
>break. Double-hulled ships can be broken in half under such conditions,
>so surely suffering only a broken bridge window (and losing all
>electronics) was minor compared to what *could* have happened.

If ALL the electronics are taken out by water in the bridge, that's
a design disgrace.

>(Think about how high that bridge window is, Bill, from the ocean's
>surface; 50 feet? 70 feet? Now consider a wave that could reach that
>height. This is real life on the open ocean, Bill.)

Wow, I'm impressed. Damn, I've ridden out enough storms myself
that had green water on the bridge. That's not he point. Today, with

battery back-up and small transcievers, any SHIP should have multiple
back-up.

>For amrchair sailors such as yourself, a very good book to learn more
>about what the sea is capable of would be W.Bascom's "Waves and Beaches:
>The Dynamics of the Ocean Surface."

It is only with the greatest restraint that I don't just tell you
where to go. For your information, I did 4 years on a WW-II destroyer
from 66-70. operated in the Caribbean, the Med and the Far East to
Viet Nam (member, Gulf of Tonkin Yacht Club:-) so don't patronize me
with your claims of nautical prowness on the false assumption that no
one else has experienced severe storm conditions at sea.

I recently aquired a Dentrol DTR-2000L amplifier. I am told there a few fairly simple mods that need to be done to this amp or you will be buying a new 8877 tube every six month. Something about that fact that it only runs about 2200V or or so plate voltage and when you drive it on hi power SSB it exceeds the grid current specs on the tube. Also it has 6.5 volts on the filaments and they are only sposed to have 5.00 volts. If anyone out there is using one of these old amps, I would appreciate any and all help, information, mods or anything you can tell me about your experience with this amp. Tnx es 73

Most of us HAVE tried it and many don't like it.

Even those who DO like it don't think everyone should be forced
to learn Morse just to gain access to unrelated HF privs.

We're NOT going to shut up just because YOU don't want to hear
what we have to say ... if you don't like what we say, don't read it.

In other words ... go to hell.

1627. Help Pse - Yaesu FT1000MP and Data modes on FSK.

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: Andy Burnett <g0hix@argonet.co.uk>
Message-ID: <na.8e0fbb477f.a70220g0hix@argonet.co.uk>
Source record: 199797

I posted this article in uk.radio.amateur initially and only got 1 response which suggested that I try AFSK via the packet port, which I have done and have had 95% success with, but still does not answer my original questions or help me to get FSK working. Yaesu UK are now also involved, but I would be grateful to hear from other amateurs who have suffered from a similar problem or who may have mods to cure it!!

Original Help Request.
======================

I have recently purchased a Yaesu FT-1000MP to replace my old TS850s and am experiencing a problem which I hope somebody may be able to help me with.

The tnc is a kam+ linked to the radio using the rtty port/fsk shift, with rtty mode selected on the radio and agc set to fast/slow/auto. When in a data link with another station and acting as the master, the radio works well with no problems (ie sending data to other station), but when the link changes over so that the other station is sending data to me, and my tnc is just sending acks etc the problems start and the link becomes unusable due to the large number of errors etc.

What happens is that over a period of approx 5 ack transmissions from me, the time to drop from tx to rx increases so that a large time delay occurs and data being sent by the other station is lost and hence the errors occur. Looking at the signal/power meter on the change over from tx to rx shows that when the tx ceases, the rx meter ramps to full deflection (as if rf gain had been decreased to min) and then slowly drops down to the expected signal level, when the received audio is then obtained and passed to the tnc. Is this a problem in the rx circuit as the radio has more time in 'receive' mode when my end is just sending acks???

Taking heed and following the advice in the manual which states that if using amtor the agc MAY have to be set to off I find that all is ok during the link, the only problem being that the rf gain then has to be continually adjusted so as to avoid distortion of then incoming audio due to variances in the rx level.

As the radio performs faultlessly when sending data and only falls over when sending acks, (tnc used with TS850S with NO problems at all, so not tnc problem) I feel that having to use agc 'off' all the time is not a suitable answer to my problem,(especially as this radio offers 'special features for digital modes' unquote) and I would be most grateful if any other users of the FT100MP and data modes who may have any advice or mods so as to allow reliable operation with normal agc settings contact me with their help/advice etc.

Many thanks in advance for any assistance forwarded.

Best 73, de Andy (G0HIX).

Because a stupid QSL card and the competitive games that it
represents arre the most important things in the world to many
hams, for whom "superiority" (stomping anyone and everyone
else into oblivion with their "mine is bigger than yours" signals)
is the sole defining factor of their manhood ... I'm sure that if
the FCC enacted a 100W power limit and prohibited such
activities, that many "big gun" contester's and DXer's XYLs
would complain about how their OM's penises had shriveled up.

1630. FS : Alinco DJ 580 dual band HT

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: dconti@carroll.com
Message-ID: <E92IGw.3At@nonexistent.com>
Source record: 199800
Cross-posted to: alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

Alinco DJ 580 dual band HT for sale, the radio is in excellent condition, in box with manual, all accessories, drop in charger, EBP 20N 700mAH battery, and EBP 20 NS 1500 mAH battery. The radio has been modified for out of band TX and RX, as well as the 800 band, (cellular included). Very sensitive. Also has PL DECODE as well as encode on board.

$325.00 or BEST OFFER.

Not interested in any trades.

E-Mail if interested

1631. IC2350H vs. FT5100?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-23 00:00:00 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <335d59d3.21595836@news.doit.wisc.edu>
Source record: 199801

My car got broken into and my old radio was stolen. So, now I am looking for a new one.

It looks like I can get an IC2350H or an FT5100 for about $400.00. Which should I buy?

Here is what I'd like:

Dual reception - one receiver on each band or both on the same band
Extended Rx - 144-160 MHz and 430-460 MHz
Mod for extended Tx - 144-160 MHz and 430-460 MHz
(ease of modification does count, I'm not an amateur with a soldering iron, but I'm no expert either...)
Large memory bank (preferably more than 70 memories)

Does anyone have any comments one way or another on these radios? If you had to choose, which way would you go?

Thanks,

N9LEA

MARS call AFC6BG, clearly visible on the wall in the picture of his
shack on the QSL card I have from him.... :-)

How about Joe Walsh, WA6ACU, Rock Performer?
Priscilla Presly, i forget the call, gorgeous rich lady, movie star,
etc...
Tom Christian, VR6TC, direct descendant of Fletcher Christian of "Mutiny
on the Bounty" fame. Ok, so Tom isn't exactly famous, but his ancestor
is...

The Kenwood TS450 uses the RS-232 serial protocol. The signaling is TTL logic level, that must be converted to +/-12 volt to interface to the more popular "PC" type signaling standard. This can be accomplished by purchasing and interfacing a MAX-232 chip (TTL - RS232 level converter), and a TTL inverter. Get a spec / interfacing sheet on the MAX 232 chip, it will explain how to build a simple converter board. After that, the rig communicates at 4800 baud, Hardware flow control, 8 data bits, 2 stop bits, and no parity (if my memory serves me). After that, the commands to be sent and received should be found in the supplimental guide that comes with the TS-450. If you don't have that book, email me, and I'll send them to ya. Good luck, 73, Mike - WQ0N

>73, Jeff KH2PZ / KH6

As one of the relatively fewer hams that has held a First Tel,
I can GUARANTEE that you are right... dead on it...

Furhtermore, although what you say is sure true enough for ships
in the general sense, there is a WORSE mode to all this you
did not touch on.

Now days, we take all this satellite image stuff with a grain of salt.

However, back in the early '60's even with all the did you correctly
report, those few ships in the hurricane lanes had a double dose.
In this case, it isn't just every SIX hours, man....

It's every hour on the hour and within five minutes you'd
better have the observation SOMEWHERE on shore so that
they can get as much lead on developing storms as possible..

Try being up every hour on the hour for 24 hours a day for 14 days
to 21 days at a time, along with the Dept of Commerce fellow
zombie who takes the OBS on a two-man operation deep in the
Gulf of Mexico during hurricane season...

I guarantee you the Gulf Coast folks owe a LOT to little KHCI of
Texas A&M and Johnny and Bill Vogt at KLC, plus WNU and a ton
of others for the advance notice that was there long before anyone
was ever punching holes in them with KC130's either, folks.

I think I can chalk up part of my personality changes toward the
more agitatable side to this couple of years of insanity I op'd it.
However, it paid a CHUNK of my way through Texas A&M and for
four kids and wife....

I also know for an absolute fact that your statement is dead on.
There are VERY few ham radio operators that have any real idea
about what it is like to handle traffic under real pressure, day
after day after day after day after day, but then, how can you
EVER put it in words? There simply are no words, you have
to have been there to really understand what you are saying....

Actually Marty, it sounds more like your ISP falls for every bogus news-
group that's created outside of the recognized and accepted procedure.
There was no Call For Discussion, nor was there a Call For Votes, and
there was no posting of any r.r.a.swap charter. Thus, it's bogus and
will eventually be cancelled.

(Are you sure it's not under the alt hierarchy?)

>Why, do we station USCG cutters off of the Netherlands?

No, Bill - radio waves can travel farther (and faster) than cutters. If you hadn't done such a hack job of editing you would have seen Gary Coffman's comment about the USCG no longer monitoring 500 kHz.

>Sounds more like a ship that is did not belong
>on the high seas anyway. This was not some
>mini vessel.

Ever been to sea, Bill? Ever seen a 50 foot swell (crest to trough)? Now imagine a 70mph wind blowing; the crest of that swell will now break. Double-hulled ships can be broken in half under such conditions, so surely suffering only a broken bridge window (and losing all electronics) was minor compared to what *could* have happened.

(Think about how high that bridge window is, Bill, from the ocean's surface; 50 feet? 70 feet? Now consider a wave that could reach that height. This is real life on the open ocean, Bill.)

For amrchair sailors such as yourself, a very good book to learn more about what the sea is capable of would be W.Bascom's "Waves and Beaches: The Dynamics of the Ocean Surface."

you have to allow for the technical skills of the examiners to be familiar enough with laptops to know if the owner is fessing up that he didn't save a copy in a local non-volatile memory component someplace.

there are people that can't handle card reading gas pumps. there are some people that wouldn't know how to even begin to find a directory of files on a computer. yet, they're perfectly fine radio operators and can even do design to a limited extent w/o a computer.

we've been asking people to let us know if you're going to need a mill. in the days before headphones, we'd run them separately so the noise of the portable typewriter wouldn't interfere with others taking a test. i suspect we have enough knowledgeable VEs in the group to be able to insure that a disk was free of test content. of course, nv-ram and being able to scan erased space on the disk could retrieve most of the information (given that late model OS move through a disk's storage elements rather than always starting at the beginning..).

(of course, according to the last arrl tape shipment i got, they haven't made a new code test since 1991...but then people aren't breaking down the doors to take a code test.)

Burt,

Yes. You are missing something. Your analogy is illogical because it leaves out too many variables. It makes more sense to me if you add the following:

1. You don't know where the zoo is.
2. Only one person may shoot the animal at a time, even though there are a few thousand hunters/killers fighting for that one spot.
3. Some of the hunters/killers are armed with cannons, some with rifles, some with shotguns, and some with slingshots. Oddly enough, the hunters with the more powerful weapons get to go first. There's a chance that there will be no bear left when the hunters with the smaller weapons finally get their turn.

Also, it seems to me that there are DXers who are goal oriented and those who are process-oriented. Each type will enjoy and approach DXing differently.

Finally, I don't see a great deal of difference between the information provided on a DX cluster and the information I used to get from the DX bulletins, e.g. QRZ DX.

If I'm capable of using modern technology to help me work a rare one, I will do it. If you and others want to stack multi-element monobanders and run the legal power limit, that's all right, too. We're all different, and while I may not agree with other methods, if the person using them is doing so legally and ethically there is not much I'm going to say.

73,
George

I've found this trick very useful. Look inside any radioshack device (2 meteramp Transeiver etc) if you find a part that matchs your needs call RSparts at 1-800-the-shack. Tell them you need that part! Inside the little 2 meter amp are 3 variablecap. I know 1 of them is a 10-50 pf unit. It'll set you back a cool $1.99....Good luck!

You need the HW-8 Handbook, it has all kinds of mods and fixes for the HW-8. You can get one from Mike Bryce WB8VGE 2225 Mayflower NW, Massillon, OH 44647. The cost is $11 which includes shipping.

I have a HW-8 and it has the same problems as yours. The cure is to rewind the coils for those bands along with changing some cap values.

Good luck

Bob

Hi burt -- interesting comparison -- hunting and DX.
You may have missed the point of how one hunts.

Lets go Lion-Hunting in Africa without a guide -- armed with a spear!!
How about hunting with no weapons -- just you -- the animal -- and bare
hands!!! Now that is hunting!!! I refer you to that famous story -- The
Most Dangerous Game.

Home brewed QRP, Big Guns, Linears, Towers, Short Verticals, Clusters,
Nets, Lists -- choose you weapons mate!!

All is fair in love, war and DX -- Or Is It???

All in Good Fun
Rod in San Diego

Should be unfavorable, but the spell checker did not know that's what I meant when I typed it.

> ... but I used an Icom
> 736 with an Icom autotuner (I believe it was an "AT-2") on the
> boat to tune the backstay ...

A few have mention this tuner, I think it's now model AH-2A or B. I bears looking into. Unfortunately, there are no specs (space is at a premium) I did see some picture and it looks fairly compact

The connections sound straightforward. Both the tuner and the RF section will be mounted in the truck, so the ground connections will be very short and there are places aplenty to find suitable grounds
>
> Carl - wa6vse
> carl@ais.net

So far the vote is 4 for the Icom tuner 2 for the SGC tuner.

Thanks for the input. :)

I would say the bands have deteriorated with the CW filter in place.
Saying that releasing the CW requirement would ruin the HF bands is
wrong. I already hear many trash heads on the HF bands.

CW requirements will not solve the trash head problem. Only enforcement
of the rules and respect for the hobby/service will help to reduce the
problems.

I for one feel CW is out dated. However, I am perfectly willing to pass
the test in order to get onto the HF bands without complaint.

Hello!

May be you will interested in this information.

Our firm, "HAMILTON GLOBAL MANAGEMENT" is the distributor of
"BSS" company, St. Petersburg, which is the producer of the GMDSS -
TRAINER. It was created in compliance with international requirements
of ITU, IMO, and INMARSAT for preparing and attestation of marine
specialists for work in GMDSS areas A1, A2, A3, and A4.

The learning environment of the Trainer is based on the teacher's
handbook in the field of GMDSS. It's kept in the informational
database of the Trainer, in form of a classical Hypertext and provides
the user with main information on all chapters of the training
program.
The database contains texts, color pictures, video films, graphic
maps, data of coast radio station, etc.

Practical tasks are implemented by a complex of hardware radio
communication means (in form of active representation on display's
monitor), instruction for their operation, and informa-tion for
on-line radio traffic in case of distress, emergency, activities to
ensure navigation safety, as well as for commercial radio traffic.

We also have demo version (size of it is about 2.5MB).

Your faithfully,

Alexander Nikolayev

Source record: 199824
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a very clean, virtually mint IC765 for sale. Standard features including 500hz CW filter. PBT mod installed. Mid 3000 serial number.

This is a wonderful radio. Built in keyer and power supply, extremely fast built-in tuner for 10-160, and still a choice for serious contesters and DXers around the world.

The IC765 is still rated among the finest receivers of all radios over the past 10 years, including the latest and greatest from Kenwood, Yaesu AND Icom. I'll send you a copy of the comparisons from the ARRL Lab to show it.

Truth in Advertising: There are two small marrs (not scratches) in the paint on the top, left rear corner of the radio. They were there when I got it, and are not very noticable...that's why I say "virtually mint". The face plate and other feature are perfect. Non-smoker radio, too.

$1500 firm. Shipping and insurance from Minneapolis to CONUS will run about $50 (if it's more than that, I'll pay it). I'll make sure it's packaged right.

Email direct please. I'll provide my phone number if you want to talk about it.

> someone in the in NWS in Hawaii that once EAS was fully operational
and
> NWR-SAME fully up and running that the NWS would discontinue the use
of
> the 1050Hz warning alarm tone. If indeed that comment was made or
> someone in the NWS believes it, that is wrong. The 1050Hz Warning
> Alarm Tone (WAT) will continue to be used probably forever.

Lets get the real scoop. Check the EAS documentation. At some later date,
the NWS will likely become a backbone for the federal government to
propagate EAS events. The orignal plan to do so was curtailed due to the
below paragraph

> There are millions of comsumer and industrial grade receivers in the
> hands of the public and many institutions. They will continue to be
> made and sold in very large quantities. I know for a fact that Radio
> Shack, Maxon, and Midland plan to make and market these radios for
the
> foreseeable future.

But by EAS mondates, all systems derived of EAS are required to use the
dual tone alert, and even the NWS could be forced to do so. It is not
under the NWS or NOAA control, its under the FCC's control.

> Many models of Citizen's Band (CB) receivers on the market now have
a
> WAT feature built into the unit. You can be monitoring any CB
channel
> and if the WAT is detected on the weather radio channel you have set
on
> the unit, the unit will activate a weak tone and switch the unit to
the
> weather radio.

And in a couple years those radios will have EAS decoders on NWS
frequencies and will monitor just the counties you want. Desktop alert
radios will occur even sooner as no one likes hearing about flash flood a

hundred miles downstream.

> Hopefully you have seen the writeup I did on the reasoning for
> placement of the WAT in the coding sequence. If not, let me know and
> I'll forward a copy. In the SAME environment, the WAT will continue
to
> have a function if for no other reason than as an attention signal to
> the listener.

In EAS the attention signal is that, an attention signal. I have not seen any reason for anything in any sequence. Feel free to forward a copy.

In either case, it is foolish to say either way that it WILL or WILL NOT disapear. Do not expect to rely on the 1050hz tone for years to come. In 5 years, the FCC could force NWS to start using alternate frequencies, again making weather radios obsolete, the only thing keeping that from happening, is always the existing market.

And you can point me to the rules of the rec.radio.amateur groups too...

Carl

Is working DXCC QRP with a home brew rig and an inverted vee at 30 feet
and the cluster, any less an accomplishment than working DXCC with 100
foot tower, long john monobander and full bore linear (no cluster)?????

A point to consider!!

>phone filters for them. Do everything you can to try and resolve the >interference peacefully.

As our RFI material suggests to hams: if the interference is caused by your station (ie, harmonics and such), you must fix it at your station. If not, we suggest that you should probably be a good neighbor and help your neighbor FIND a solution. If you can tell them where to buy the filters and help them understand the instructions that come with them, you have done more than Part 97 requires, and possibly saved a lot of aggravation (yours and your neighbors') in the process.

Part 97 does not require you to buy filters for your neighbors' equipment. If you have only a few neighbors with problems, it may be the easy way out. After all, a big handfull of filters still costs less than the first hour of your attorney's time. OTOH, the fellow who lives in an apartment complex could be talking about a lot of filters. It is too bad more manufacturers don't design in the needed immunity.

>The only thing the FCC seems to be capable of now days is issueing
>and renewing licenses quickly. God, we've come a long way!

The FCC's point is that most interference is not caused by a violation of FCC rules. In their opinion, a "broken" piece of consumer equipment should literally not be a federal case. While I miss the days the FCC van would show up and tell our neighbors that the interference is not our fault, at least under current law, the FCC is right: if there are no rules being violated, the FCC is not officially involved. They could, however, be better "arbitrators," if they had the staff time available.

In the midst of all this, the FCC has taken some positive steps over the past years, at least in the area of information. The current FCC Interference Handbook states pretty clearly what kind of interference is NOT the fault of the radio operator. The document is available on the web page at fcc.gov. Between the FCC book and ARRL's RFI/Consumer pamphlet (SASE to our Technical Dept Secretary for the latter), your neighbors will have every opportunity to read about the issues in relatively nontechnical terms.

Indeed these ships are, regardless of the fitting status of the ship. It was realized in the late 70s that the Morse code based system was becoming obsolete, thus the first proposal in the IMO Covention on the SOLAS (Safety of Life at Sea) for the introduction of DSC (Digital Selective Calling) were first considered in 1978. What Stevenson is demonstrating is his abject ignorance of the international provisions that have resulted over the years international debate and considerations in order to impliment GMDSS. Indeed, the program to impliment GMDSS is nothing like the grandfathering provisions. In accordance with the terms of the SOLAS Treaty, ships that were fitted with radio equipment under the old SOLAS provisions would be issued safety certificates until 1 Feb 99. After that date, these ships would have to comply with those provisions. In other words, the GMDSS and the old system have been running in parallel because it was realized that one could not switch from one system to another abruptly without endangering the lives and property of the maritime service. To claim that shipping equipped with the old system is unsafely plying the world's ocean only demonstrates how utterly ignorant Stevenson is of the GMDSS implementation programme, even exacerbated with his ill-conceived methods debating the issues.

> Anyone who puts a ship to sea with nothing but obsolete communications
> gear is a fool ...

Indeed, the only foolish statements that I can perceive is Stevenson bloody-minded posting on issues and subjects on which he hasn't got a clue of what he is talking about.

Many older type lithiums had a seal problem. They leak and they vent.
The best solution is probably to replace the battery before they begin
to leak.

Oh yes, I am SURE he is going to find trimmers for a 160m transmitter
inside a Radio Shack 2 meter rig - NOT!!

Phil - I was surprised (and disappointed!) at all of the responses to
this request!

Where is Birkett and AJH in Rugby?

I would like ADDRESSES and PHONE NUMBERS for these two if they sell
such trimmers!!

Also - if you want a good long list of parts suppliers that may have
them, try this:

http://www.mnsinc.com/bry/hamfiles.htm

and click on PARTS

All the very best - Brian, AF4K / G3XLQ

Note that is 5 to 10 nf "nanofarads" not pf "picofarads". That's 5,000 to
10,000 pf,
where common trimmers are 5 to 100pf. A 2-meter rig is unlikely to have a
5,000pf
trimmer. I misread this too the first time.

1673. Ontario QSO Party - why phone only?

Jeff's right (for once), rec.radio.amateur.swap is a bogus group. And any and all rec.ham-radio.* groups are bogus as well. They were replaced by the rec.radio.amateur.* groups in the grand renaming. And there is no rec.radio.amateur.packet group either. I've seen that as a bogus group on some ISP servers, but it, like the rec.radio.amateur.swap group, is the result of some sysop doing an illegitimate group creation. All Big Eight hierarchies have an established process for creating groups. None of these bogus groups have passed through that process. But if someone wants to do it legitimately, I'd vote for the creation of an amateur swap group, and for a packet group under the digital hierarchy too.

Bo ...
I have the same vehicle, and run HF mobile. It was a tough job to get the noise out -- and I haven't completely succeeded. Some things that DID work;
1) Placing a large capacitor (47000 uF if I recall) directly (very short, heavy leads) on the alternator.
2) Running copper ground strap from the engine block to the frame - in several locations.
3) Grounding the hood to the frame with copper strap.
4) Ditto for the transmission case.
5) Bypass capacitors on the wiper motors.
6) A biggie - ground strap from the rear defroster (at the wiper box) to ground (used the roll bar as an attach point).
7) Scrape paint off mating surfaces on roll bar and body.
8) Use the best coax you can find for the antenna connection.

I still get some RFI (mostly from the wipers, still) but for the most part things work out pretty well 80-10m. I have an IC-706, which can be remote-mounted. I 'm thinking of placing it in the back (right next to the antenna) to minimize feedline pickup, etc. It's one of those "when I get around to it" things, though!

Good luck/73...

I've never seen compression trimmers as big as 10,000 pF, which is of course not to say they're not available. 10,000 pF has a reactance of about 0.1 ohms at 2 meters, so it's unlikely to be found in such equipment.

> to have been there to really understand what you are saying....

The point is that it is no longer necessary or desirable to force humans
to contort their wetware in such antiquated, disturbing, and inefficient
ways ... there are FAR better systems available for disseminating
information
or gathering it ... none of Jeff's (or your) purely semitmental
reminisences
about "how things were in 'The Good Old Days' " is pertinent in the least
to
the present day or serves in any way to justify continued Morse hazing for
amateur licenses with access to HF ...

6146A's, 6146B's, and 6146W's are still available. The characteristics
of each are slightly different and will probably require reneutralization,
assuming that the application you're using them in is a RF power amp.

What I was saying was that no ship should be permitted to continue to
operate with obsolete communications gear ... that the Russian ship
in question allegedly had ALL of its' comm gear but an old 500kHz CW
rig knocked out by some water coming in through a broken bridge window
```

tells me that their systems were pretty poorly designed and installed in
the
first place ... like ZERO reliability/redundancy ...

> Indeed,
> the program to impliment GMDSS is nothing like the grandfathering
provisions.

> switch from one system to another abruptly without endangering the lives
and
> property of the maritime service.

Certainly parallel operation of old and new is a practical necesity during
a
transitional period ... I never said otherwise ... but reliance on 500 kHZ
Morse
gear is pretty bad, when the USCG, I believe the French, and many others
have stopped even listening there ... EPRIBs and VHF radios are NOT that
damned expensive ... I find it inexcusable that a ship would put to sea
without
them ... if the owners can't afford basic safety gear, they have no
business
operating the vessel ...

> To claim that shipping equipped with the
> old system is unsafely plying the world's ocean only demonstrates how
utterly
> ignorant Stevenson is of the GMDSS implementation programme, even
exacerbated
> with his ill-conceived methods debating the issues.

Jim ... kiss my ass ... you pompus, anal-retentive asshole ... for the past
months, you have taken to criticizing practically anything I say because
you
find my "style" offensive (because I call a spade a spade, like in the
first
line
of this paragraph) ... I note that your e-mail address has moved to the
doc.ca
domain .... that's hardly surprising, since your attitudes are consistent
with
those of some petty bureaucrat ...

There *are* a lot of unsafe commercial ships out there, operating with
obsolete and/or malfunctioning communications equipment and/or

running on autopilot with nobody *really* on watch, relying on their radar alarm to warn them of impending collisions ... many small vessels are quite literally run down by one of these behemoths because they couldn't get a reply to their calls on VHF16 or other calling channels and weren't capable of enough speed to get out of the way of the larger vessel ...

If you don't like my "tell it like it is" style, please feel free to kill-file
me and don't read my posts, but damned well stop trying to squelch me ... you are NOT the conscience or the moderator of the internet ...

> > Anyone who puts a ship to sea with nothing but obsolete communications
> > gear is a fool ...

As one with many thousands of sea mile "under my keel", I stand by the above
statement, Jim ... if you disagree, you, too are a fool IMHO ...

> Indeed, the only foolish statements that I can perceive is Stevenson
> bloody-minded posting on issues and subjects on which he hasn't got a clue of
> what he is talking about.

How many nights have you spent at sea, dodging commercial shipping that couldn't (or wouldn't) respond to radio calls on established calling channels
as you attempted to negotiate passing aggreements ???? (note that while sailing vessels under sail have the right of way under maritime regulations,
being alive is better than being (dead) right, so sailing vessels virtually always
have to ascertain (by radio communications, when possible) or guess (when the ship ignores their repeated calls) what the ships are going to do so the
sailing vessels can dodge them ...)

I suspect that you, Jim, are the one who hasn't a clue (in the *real* world ..

You're speaking of ionosondes. These are a type of CW FM radar, generally operating at HF, used to measure the the time delay over radio propagation paths, to determine the height of the ionosphere, number of hops, MUF, and to study ionospheric physics. I hear them very frequently, sometimes several per minute, but many DXers seem to concentrate on the desired signal to such a degree that they don't hear the characteristic "fweep" of an ionosonde sweep.

There was an article in the September, 1993 Popular Communications by Andrew W. Clegg on these. It included a table of operating schedules. However, the table didn't seem to be very accurate even in late 1993: I have heard ionosondes at times not given in the table, while failing to hear others when conditions were exellent along the path.

Recently, a physicist who has worked in ionospheric reseach joined my research group. He tells me that he knows of no overall tabulated schedule, and that many research installations change schedules frequently, or make unscheduled sweeps, depending on the particular physics they are studying.

> Using a computer and a receiver with a CAT interface, one

> is heared, provided the timing is right within a few tens
> of a second. One could simply watch the frequency display
> and read the MUF when the signal disappears.

I've done this manually with my Drake R8: listen for a sweep, and then chase it up the dial by hitting the [^] button (which bumps you up 100 kHz) once a second. Gnurdy amusement the first couple of times, but then...

There are a number of problems in using these as propagation monitors for hobbyist purposes:

The transmitted power is relatively low, typically 10 watts. Specialized ionosonde receivers continuously sweep the local oscillator synchronously with the transmitted frequency, yielding a nearly constant tone (or tones if multipath is present). This drastically improves the sensitivity of the receiver to the transmitted signal. With a receiver that can't sweep continuously, the distant ones are difficult to hear.

There is no ID, so an accurate schedule is essential (and does not appear to be available).

The locations generally aren't on the paths I'm most interested in (I really don't care what the MUF between here and Camp Lejuene is :-).

The regularly scheduled ones repeat at 5-15 minute intervals, making a probe of conditions in different directions at different frequencies rather time consuming.

I've given up trying to use these: I find it is much quicker and more effective to check propagation using familiar SWBC and time signal stations.

> progress.)

It seems to me that it would be like complaining to your neighbors
if they watched you taking a shower because your builder built
your bathroom and shower stall out of clear glass. If they weren't
around, you wouldn't have a problem with the clear glass as no one
would be around to see you. While it's a stretch, it demonstrates
an obvious error in the process of assigning fault. From the
person receiving the interference, the thought process is "Your
transmissions are messing up something I should normally be able
to do, therefore you are causing me the interference." The fact
a corded phone is acting as a radio receiver when it clearly
shouldn't be or that the amplifier in a stereo is improperly acting
as a receiver is of little consequence to the lay person receiving
the interference. To them the solution is simple, if you don't

transmit, they don't have interference, therefore you need to
fix "the problem".

The sad thing is that in most of the cases I'm aware of, amateurs
(either the neighboring one who's transmissions are being improperly
received or others) have offered help only to be told "It's not
my problem." Awfully hard to fix those situations. Once someone
has come to that conclusion, they will rarely back down from it
as it not only means they have to do something, they also have
to admit they were wrong.

73,
Todd

As someone who *has* been to sea and seen some pretty rough
conditions (in much smaller craft), I can in good conscience state
the following:

If a broken bridge window and some water through it can kill the
entire ship's communications capabilities, someone did a pretty
shitty job of designing and/or installing those communications
systems, Jeff ...

> (Think about how high that bridge window is, Bill, from the ocean's

... you can lead a horse/mule to water, but you can't make it drink .. you can diatribe/preach/flame at each other until the cows come home (if they can make it through the bs) -- but the only one who's gonna change any mind is the one whose skull it's in - *you* can't make 'em ...

as for me ...

my experience: studied it (1979-1980), passed it, got it (licensed 1980, novice), tried it (cw opping), didn't have much fun with it, dropped out because of it (wasn't fun), got busy with other more important things in life anyway (like making a living, raising a family, changing careers, et al) ... 14 years later ... got some free time, upgraded (from novice -- kept it current, kept qst -- to tech+), discovered vhf and above, repeaters, weak signal, skywarn, packet, et al ... now looking at RACES, SATERN, wanting to get involved with public service and emergency service (solid need in our area, always has been) but currently on semi-hold as people in our area who train and teach are busy in grand forks/fargo/drayton/ area, and will be for some time ...

my 2 cents: cw is interesting (so are antique keys and telegraph sounders and old-time radios -- wish i had the old S20-R of my youth), and does have a place (as does everything) ... cw out-moded? no -- it is still useful, as is rtty (and spark, too, if the situation were appropos) ... cw, as a requirement? i don't think so -- it discriminates much, generates more discrimination of all kinds (don't think so? go back and read the archives of this ng) ... as a "filter"? to me, it becomes one and is "needed"/used if you're elitist, classist (possibly racist), a "nimby," if you think your crap don't stink, if *you* are always "right" and insistent on making everyone else see things *your* way, or if you're so dead-set blind, deaf and inflexible that you can't see the forest (pick *your* forest) for the trees (pick *your* species) ... i try very hard not to fall into those mind-sets

and their traps ... and it ain't easy ...

possibilities? if i could suggest it, i would say this: no code in the exams ... however, implement an official (i.e., fcc) endorsement, similar to the commercial radar endorsement, to be applied to any one of three license levels corresponding to beginning, intermediate and highest license levels (*you* pick the naming conventions -- that's another whole pandora's box of emotionality tailor-made for combative trollers and flamers) ... could it work? do we not already have cw-only sections of various bands? do we not already limit access to various bands on the basis of license level attained (license level granting access to frequencies with bandwidth to be utilized, concomitantly linked to demonstrated -- via testing -- appropriate knowledge/experience?) ... could we not say that such a "cw endorsement" could be the "extra" icing on the cake (it takes those who wish to go there "right to the top," yet does nothing to discriminate against those who want to belong to the ham community as a whole, at all license levels)? ...

something to ponder -- at least for most; for others, perhaps if their emotions and calcified gray matter would allow such mental exercise ..

... but then, what do i know, right? right ... such things are for experts ...

In article <33604cf0.12740465@news.fastlink.com.au>,
barryoXX@fastlink.com.au says...
>
> You are ignoring the fact that it is the amateur operator that is causing
> all the trouble.
> Have some thought for the neighbour.

This follows the logic of people that move next to active airports then
complain that the airplanes are creating too much noise.

Barry..if the neighbor refuses ALL help and their only answer is to have
you off the air completely, should the neighbor be given any thought??

I would imagine that in AU, things must be very different. Maybe the
fact you guys are all upside down has something to do with it.

Remember. It was the neighbor who instigated all this. It was the
neighbor who refused any help to correct the problem. It was the
neighbor who choice use the legal system to their advantage and LOST. To
put all the blame on the operator shows a total lack of any understanding
of this matter.

Are you basing your conclusions on the (my) original post?? If so, how
did you arrive at these conclusions. If not, please explain where you
found additional information not available to others.

>
>Anyone who puts a ship to sea with nothing but obsolete communications
>gear is a fool ...

Reread the story. The ship's electrical system was taken out after a
wave crashed through the bridge window. You have no idea what other gear
they had aboard that ship - how can you speculate like you're doing?
The only item left operating was a portable 500 kHz xmtr.

>I have little sympathy for someone who puts a grossly ill-equipped vessel
>to sea,

Then you yourself should never put to sea, for no sea-going man would speak
of fellow sailors like you do in the above sentence. It's your obligation
to care and assist those in need on the high seas.

>then has problems, and complains about the results ...

There were no complaints - they were very happy to be saved. (You probably
would have passed them by - there they are floundering in cold icy water
during a storm and Carl says "Serves you right for losing your electrical
system and only being left with 500 kHz CW." Your cold-heart and mean-
-spirit clearly come out in your posts.)

Does anyone know of a pin (socket) compatible replacement for the 6146 tube and eventually where it is available?. There is supposed to be a more rugged version of a different type denomination.
Any information would be appreciated.

Any one out there have- or have had- experience with the MFJ-9406 6-meter SSB rig? How about its Rx and Tx performance? Stability?

Also, the MFJ-1762 3-element, 6-meter yagi beam? How well does it perform?

Appreciate any info and ideas you may have.

Thanks,

Allen, KJ6XH

>

I don't see any conflict with what I said ... I suggested that existing
licensees have until next renewal (as much as 10 years) or 5 years,
whichever was longer, to prepare to be tested to the new standards.

Only at that point would they lose their license if the were unable to
meet the standards. A license is *supposed* to prove one meets
the established standards, right? So why should anyone think they
can be incompetent *forever* and still maintain their license?

That's like saying "Yes, I went blind 10 years ago, but I should still
be able to keep my license to drive an 18-wheeler, because I passed
the test back in '57."

Retesting, with adequate time and notice to prepare to comply with
the new standards, is justifiable ... technology changes too fast and
too much to believe that someone who's been licensed since the
1940s of 1950s is still competent ... IMHO, most *aren't*, plain and
simple because they've refused to keep up ...

If that isn't fair, I don't know what is ... I see NO justification
whatsoever
for a permanent grandfathering of incompetence ...

>under the NWS or NOAA control, its under the FCC's control.

The FCC is the implementing agency, but the EAS is actually under FEMA control. NWS Atlanta has already been designated the Primary station for the Atlanta region (replacing WSB), and transmits the new digital EAS alert signals to activate the system. Other NWS offices are to be transitioned as funds become available (according to the FEMA document approving our regional plan).

NWS transmitters aren't the only method of activating the system, however. The alert system is designed to be robust and redundant. We're required to monitor NWS transmissions, but we also have to monitor the Secondary (WPCH-FM), as well as our network and news wires. We also monitor GEMA and Fulton EMA for State or Local activations. When an EAS activation is received from any of these sources, we have to retransmit it (after verification).

The old dual tone system officially died Jan 1, 1997. We now transmit the EAS digital activation burst followed by aural and visual repeating of the warning information supplied by the originating source. When the alert is cancelled, we again transmit a digital EAS burst containing the termination information. The new equipment lets us do this automatically.

AFAIK NWS Atlanta no longer transmits the single tone alert. At least our old Wx receiver doesn't unmute now when we receive an EAS activitation from NWS. And there is nothing in the EAS plan about using the single tone alert. I suppose they could continue to use it *in addition* to the EAS signal, but the EAS plan doesn't require it, and they don't appear to be doing so.

>Have some thought for the neighbour.

Actually, in most cases of interference, it not the amateur operator "causing" the trouble, it is the lack of filters and shielding in the design of the consumer equipment. I can certainly understand why a neighbor would be upset; I just wish they would be upset at the manufacturer who designed equipment that doesn't work well near a radio transmitter. Radio transmitters are not rare in residential neighborhoods. (In fairness, the manufacturers are making some progress.)

Don't get me wrong; some interference IS caused by violations of FCC rules -- harmonics or other spurious emissions that interfere with other radio services. In these cases, Part 97 requires that hams fix their transmitters. Almost all hams and the ARRL agree; this is the appropriate thing to do. If interference is caused by spurious emissions, it can ONLY be fixed at the source.

Even in cases where the interference is not caused by a transmitter, the ARRL has always recommended that hams be good neighbors and help their neighbors FIND a solution. This is more than the law requires, and I believe that it does represent a good-faith effort to have some thought to the neighbor.

As Terry may have been alluding to, there are at least a small number of "interference" cases that involve harassment by the neighbors of hams, perhaps in response to other issues, such as a tower. Now, I have always held the personal belief that courts are a solution of last resort. But in cases where interference is caused by consumer equipment, and

neighbors choose to take the matter to court in the face of clear statements from the FCC and offers of friendly cooperation from the ham, it may sometimes be the only avenue open for relief for both parties.

Modest single ~2.5 wavelength yagi of older design (Cushcraft 215WB).
One neighbor could hear me through their TV set when it was "turned
off".
Apparently not only was the shielding lousy on the TV, the audio
circuits weren't powered down when the unit was turned off by the remote
control. They heard it one night when their daughter came in saying
that
a man was in the TV.

> Imagine the fun I used to have with 400 watts to an 18 dBi e.m.e.
> array on 2m! 25 kW ERP sure packs some punch!

If I was vengeful (and rich to pay for the ensuing lawsuits) I'd have
loved to put up 4 long boom yagis and 1500 watts just to see if I
could light my neighbor's florescent lights when they convinced
the village to not allow me to have antennas more than 10 feet
above the roof. :-}

I looked into registering the .ham top level domain from eDNS and it looks like we can get names like ron@n1lsj.ham (me :-) for 5 bucks a year each if we can get a bunch of people interested. Check out how eDNS works at www.edns.net and let me know if you are interested.

About 5 years ago when I went thru my last "reactivation", I got back
into it when I bought a dilapidated SB301-401 set. I restored the
radios. The transmitter was the worst - looked like it was the guy's
first time ever with a soldering iron in his hand. I got the rigs
running "showroom", and very unique - a set of rigs that were as old
as I was. Keeping with my primiive approach, I cut a 20 meter dipole
and attached it to the roof of the attic. Got on 20 SSB at about 2 in
the morning and found a pair of Aussies talking. I broke in and was
surprised with a respectable signal report. They commented that the
audio was an example of the best they'd ever heard. We talked a few
hours roundtable until the band closed up. Sure as hell blew the hell
out of contest operation. But then again, most HF ham QSO's are
basically:

1)Call CQ incessantly to make sure you drive away most parties and
ensure that only the most dedicated remain.

2)Establish contact.

3) State name

4) QTH along with nearest major city.

5) Number of years a ham

6) Give signal report

7) rig

8) antenna

9) weather

10) go bact to 1

> Finally a SIMPLE straightforward response to the anti-code whiners!

It doesn't really matter to me because ham radio and CW will survive whether or not it is a requirement. There are many of us that just plain enjoy CW. It just seems that most of the whining is from the "pro-code" rather than the "no-code"

If it's about nine feet tall and has a small x on the top it's a
astro plane. That antenna is just a fair antenna, but a good
antenna considering that its only nine foot tall.

Jerry;
Have you considered how you might feel if you find yourself in the
line of fire for one of these links? I presume they'll be mostly if not
all fixed azimuth beams aimed at one facility's recv. antenna. I'm not
trying to rattle your chain about this, but, it seems that if there's a
proliferation of these installations (and I think there's bound to be)
then ther'll also be a proliferation of hams who can't do much but pack up
and relocate. ...or am I missing something??
regards...

DIVSIONAL NEWS

1997-98 COUNCIL

Following last week's Annual General Meeting and Council elections, the 1997-98 VK2 Divisional Council line-up is as follows:

President: VK2EO GEOFF McGrorey-Clark
Vice Presidents: VK2YC - Michael Corbin, and VK2WBK - Brian Kelly
Secretary: VK2EFY - Eric Fossey
Treasurer: VK2KUR - Eric Vandeweyer

The other Councillors are:

VK2AGW - Ken Westerman
VK2JPA - Pat Leeper
VK2AEJ - Owen Holmwood

Outgoing President Peter Jensen VK2AQJ tendered his resignation to Council during the week; he will be replaced by the next highest polling candidate:

VK2NH - David Thompson

EXAMINATIONS

The next examinations will be held at Amateur Radio House on next Sunday 4 May 1997. Candidates should report at 12 noon.

CHANGES AT THE SMA

The Spectrum Manager, Christine Goode, has departed the Spectrum Management Agency to take up a position with the Commonwealth Superannuation Board. Senior SMA officer, Roger Smith is the acting Spectrum Manager.

The change came in preparation for the establishment of the Australian Communications Authority, which has been created by an act of Parliament and will commence operation from 1 July 1997. It will succeed and take over the combined roles of the Spectrum Management Agency and the telecommunications regulator, Austel.

The head of Austel, Neil Tuckwell, has moved to the Australian Competition and Consumer Commission (ACCC), working under contract as a consultant.

--WIA "QNEWS" Bulletin, dated 20th Apri

WICEN NEWS

As mentioned last week, the date of the Bridge to Bridge Speedboat Classic has changed. Instead of 4th May, it is now on Sunday 6th July, starting at 10am. The coordinator, as before, is David VK2KLX, and at least six people are required.

Next month sees the Hawkesbury Emergency Expo, run by Kevin VK2CKD, over 16th-18th May; and an Emergency Management course will be held at the Terry Hills Emergency Centre on the weekend of 17-18th May, for which Barry VK2AAB is the contact.

Events further away include the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG on the 7th June; the Bridge to Bridge Speedboat Classic, run by David VK2KLX, is on 6th July; the Colo 24-hour Horse Enduro is run by Neil VK2XNF on 12th July; the annual City to Surf Fun Run will be on 10th August; the Oberon Car Rally, also run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

The newest Amateur Radio satellite, RS-16, should be ready for general use in about two months. This, according to Russian space enthusiast Leonid Labutin, UA3CR, who says that this latest ham radio satellite is undergoing final testing right now. Once tests are complete it's expected that the Mode A transponder will be switched on.

RS-16 was launched as part of a compound satellite package called Zeya. In addition to the RS-16 package, the Zeya spacecraft is made up of an experimental navigation system, a number of experimental reflectors, solar panels and batteries.

AMATEUR RADIO: DON'T LEAVE EARTH WITHOUT IT

Shuttle Astronaut Jay Apt, N5QWL, recently went home to Pittsburgh, Pennsylvania, where he gave a free lecture at the Carnegie Science Center. According to Bill Davis, KA3HPQ, Apt had an excellent program and mentioned both ham radio and SAREX. Jay also stated that he would never fly in space without Amateur Radio.

--Amateur Readio Newsline no. 102

DX NEWS

SCARBOROUGH REEF - The 1997 BS7H DXpedition to Huang Yan Dao, Scarborough Reef, is expected to begin on April 30 and last for 7 days. Look for activity on 160 to 10 meters, including the newer bands. CW and SSB activity on 6 meters, and RTTY activity on 20 and 15 meters, is expected. Some activity on the Russian RS satellites is also expected.

MAURITIUS - 3B8/F6DBZ will be active using CW and SSB until 21st May.

GUYANA - 8R1ZB will be active until 29th April. Activity will include CW, SSB and RTTY with operations on 14 to 10 meters.

SPAIN - Club station EA2URD will sign EG97CMC until October 12 to celebrate the 1997 World Cycling Championship in San Sebastian. Activity will be on all bands and modes.

SWITZERLAND - Special Event Station HB4FG is active today (27th) in celebration of the 90th anniversary of the Firemen of Cavergno. Look for CW and SSB operations on 80, 40 and 20 meters.

BULGARIA - In commemoration of the 2nd IARU High Speed Telegraphy Championship taking place in Sofia, Special Event Station LZ0HST will be active until October 30.

SUDAN - Sid ST2SA has been active from here. Look for him on Saturdays and Sundays between 2000 and 2400z on 20 meters.

MARSHALL ISLANDS - V73WP will be active 5th and 6th May. He expects to be on 160 to 10 meters, including the newer bands.

WESTERN KIRIBATI - Between his Marshall Islands operations, Tada, JA1WPX, will operate from here as T30WP from today until 5th May. He will be active on 160 to 10 meters, including the newer bands.

MEXICO - XE1GTD and group are going to put Alacranes Island on the air. A multiband and multimode operation is scheduled for this weekend, ending today. An XF1 call sign is expected to be issued.

--ARRL DX Bulletin no. 19, dated 24th April, 1997

CLUB NEWS

HORNSBY & DISTRICT ARC INC.

Well the formal Monthly Meeting has passed, and when all business was taken care of, a talk on DXing, given by Stephen Pall took place, we found it very interesting and were made aware of points that will help us with our DXing. Thank you Stephen. VK2PS. The next meeting is the Mid monthly meeting taking place, on the 13 May 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station).

Training Classes

The training classes are held each Thursday evening at 7:15 pm., in a hall at the corner of Palmerston Rd. & Burdett St. opposite, the Hornsby Hospital. For more information phone, Tony VK2BTL on 9487 3383.

The Club conducts a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanner or receiver to 147.250.

Should you wish to know more about the Club, or its activities, please write to . H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2VJRT - Publicity Officer.

FISHER'S GHOST AMATEUR RADIO CLUB

The lecture and demonstrations given last month by Jack VK2DVH were well received by those who attended.

Committee members are reminded that the next Committee meeting is the 5th May.

Our next general meeting night will be 7:30 pm Tuesday 19th May in the Club rooms at Campbelltown High School, Chamberlan St Campbelltown. (Look for the HF Beam!). The nights' lecture will be about the Internet. The lecture for the June meeting will be about the Mobile Phone Network.

--Chris VK2ZCJ

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton.

Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday
night all checkins are welcome.

Upgrade your morse. Classes on Thursday nights.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events,
31st of May. Lecture on Microwaves and Plumbing By Dave VK2GIO.

--The Publicity officer Michael VK2E

The 7th Summerland Computer Expo will be held on Saturday 31st May at
Lismore City Hall.

- Inspect the latest in Computer Technology and many other electronics,
communications and general technologies on display

- pre-loved equipment will be on sale, and you can bring and sell your
own.

- The expo will be open 9:30am-4:30pm, entry is $3 per person, $5 for
families

For more info, write to PO Box 524, Lismore 2480, or phone/fax (066) 215-

Depends. For me, the furthest DX point on earth would be the Kalahari Desert in Botswana (antipodal to Hawaii). But even if I were to work someone in A2-land, why shouldn't I continue to work closer DX? I've got weekly chess games with hams in the Cook Islands and the Marquesas.

Because the band was dead on the short path, dummy. Sorta like having the street torn up between you and "next store." Not that Sweden is anything like next door to Seven-land.

In any case, it sort of puts the lie to your story about how you can't work any farther than half-way around the world.

In fact, I've heard that on some bands, and with the right antenna, you can talk clear around the world, thus allowing you to talk to yourself. What more could any ham want, I ask?

No threat - I gave him a choice: Contact me or I'll contact the postal authorities. Why on earth would you side with someone selling inoperative gear? Is that something you've done in the past and the words "mail fraud" send a chill up your spine, so you feel the need to come to his defense?

Your description fits that of the Avanti "Astroplane" CB antenna of some years ago. It is a very good antenna and can be tuned for ten meters, if that's where you are going to operate. Other than that I can't help you much. Try running your post on the CB newsgroup. Good luck.

Go with an ARCO 466 or 467 and pad it with parallel silver micas. It will take some experimenting. The largest mica compression caps I have ever seen were 2700pf and had a 1/8" tuning shaft. Danny Stevig had them a few years ago.

I saw a review in either CQ or QST last year? It seemed to impress the reviewer! I've heard several of them on the air and they sound quite good. You can call MFJ and get the manual for free, look it over.

But you don't know that do you Carl... Your belief is found on pure speculation, with no information to back up your claim. You have no idea whatsoever, other than a news report to draw such a conclusion, regardless of the real fact, now do you Carl?

> Jim ... kiss my ass ...

Carl, you haven't the guts to drop your drawers and bend over in front of me, so don't issue any challenges that you aren't prepared to go through with.

>you pompus, anal-retentive asshole ...

Is that the best insult you have Carl? Come on, Carl, a scum sucking, bottom feeder like you should be able to do better.

for the past
> months, you have taken to criticizing practically anything I say because

>

Oh I agree, but you have no idea whether this particular ship was properly equipped in accordance with SOLAS, do you? But you have to shoot off your yap and try to impress us, for no bloody reason, other than to be mean and nasty. The fact that you think that I am a fool is high praise indeed.

> How many nights have you spent at sea, dodging commercial shipping that

>
> I suspect that you, Jim, are the one who hasn't a clue (in the *real* world
> ..
>

You know Carl, the fact that you have spent many nights at sea is irrelevant to the discussion, isn't it? Like many of the pro-code testing arguements, they too attempt to bring in irrelevant factors to the discussion.

So tell me Carl, what are the chances that I really care about your judgements? Go ahead, lay on all the insults you like Carl. The only problem with your continued insulting postings is that it you not only insult that individual, but you assault the dignity of everyone in these newsgroups. But what is so frustrating is that it is all so unnecessary. If being insulting is what you call a spade a spade, I daresay the rest of us wish no part of it. I suppose there is nothing we can do about it, we will just have to grin and bear it. But, you haven't the guts to take some of your own medicine, do you Carl. Anal retentive indeed.

> Carl - wa6vse
> carl@ais.net
>

You haven't the maturity to reform Carl, so I guess there is no point in asking you to refrain from posting....

>Thanks for the information I now need to find out in what shape my is in
>it is older that four years. Do the bad batteries only show up after a
>certain date ????

I had the same thing happen to my TS-690, at about the same age.

I thought the lithium battery had just gone bad but when I took the
rig apart I found that it had leaked and two of the lands on the board
had been destroyed. Thankfully I was able to repair the board.

If I hadn't seen it with my own eyes I wouldn't have believed it since
I'd never heard of a lithium battery leaking before this.

I decided not to replace it with the Kenwood part and instead replaced
it with the largest lithium cell holder that would fit in the
available space. The capacity of the cell that fits this holder is
less than the original but it will be a heck of a lot easier to
replace and the cells are available at any Radio Shack.

BTW the original cell still checked good. One of the lands that was
destroyed supplied battery power to the memory which is what made it
appear that the battery had gone dead.

1747. US License Examination Opportunities Scheduled 4/25/97 to 7/30/97

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-25 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <3360DAD7.3328@arrl.org>
Source record: 199607

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

Have you tried our ARRLWeb ExamSearch Page? If not, why not
give it a try at "http://www.arrl.org/arrlvec/examsearch.phtml"

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.arrl.org/fcc/fccld.html

or look for the University of Arkansas Little Rock Web page
FCC call signs look up link link (http://www.ualr.edu/~hamradio/)
link from the ARRL Web page at: http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. FCC National Call Center can be reached at 1-888-225-5322.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License.
Form 610-V is the special application for persons seeking a
Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC
vanity call sign information fact sheet PR 5000, number 206v)
by writing ARRL, 225 Main Street, Newington, CT 06111.
You must include an SASE.

Form 610 or other forms, including Form 610V, are also available
from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests
by calling 800-418-3676.

****

LICENSE RENEWALS OR MODIFICATIONS

Effective in late October 1996, the FCC ceased sending amateurs
renewal reminder notices using Form 610R. Amateurs may still
renew the licenses by mailing a standard Form 610 directly to
the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. There is
presently no charge to renew or otherwise modify your license through
the FCC.
In mid-July 1996, FCC authorized VECs to accept and electronically
submit data for FCC license renewals or other amateur license
modifications. Therefore, ARRL Members may now choose to send their
standard Form 610 (not 610R) to us at the ARRL and we will submit
the application data electronically to the FCC--which the FCC
typically receives and processes overnight. This is a free
ARRL members-only service.
The W5YI Group currently sends a W5YI-version Form 610R to
amateurs notifying them of their impending license expiration.
Only W5YI can accept the W5YI-version Form 610R electronic processing.
The cost of the service is $6.
License modifications that can be handled by any of the above
sources include RENEWALS, or ADDRESS, CALL SIGN or NAME changes as
supplied on Form 610. Forms 610-A, 610-B and 610-V can presently
only be processed by the FCC (per FCC instructions).

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*,**)Technician (dated before 3/21/87)-Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-338-2696) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you.

Normal turnaround at FCC is 3-5 business days after receipt.
(**) Any person holding a now-expired Technician license issued
before 3/21/87 can obtain credit for Elements 3B and 1A
(per Section 97.505(a)(8,9)) of the FCC Rules.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 215-5052. ARRL/VEC Fax 860-594-0339.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
Fax 860-594-0339. The 1997 test fee is $6.25.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473. The 1997 test fee is $3.00.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-832-6803

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = MOKAN VEC (previously named PHD VEC), PO Box 11, Liberty,
MO 64068-0011; 816-781-7313. The 1997 test feee is $5.00.

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1997 test fee is $6.00.

T = W4VEC VEC (previously named TRIAD VEC), 3504 Stonehurst Pl,
High Point, NC 27265; 910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1997 test fee is $6.25.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1997 test fee is $6.25.

It's a great little rig! Try http://www.jyu.fi/~pjka/IC-706/ for a
full review and the inside scoop on mods available.

Questions answered:
Worth it? YES
Base/Mobile? YES (needs 12V power supply at home)
Packet-ready? YES

And you are welcome to do so.
Your comments are even handed and you await facts before rushing to judgement.
Are you sure you are a ham?

I have acquired one of these at the right price and would like to use it to monitor the aircraft band. Dos anyone have the pinout for the power connector? It is a Jones type with I think twelve pins.

HAMS CONTINUE FLOOD RELIEF ASSISTANCE

Ham radio has assumed a critical role in the wake of major flooding along the Red River that overtook the cities of Grand Forks, North Dakota, and East Grand Forks, Minnesota. Most area residents--an estimated 50,000 people--were evacuated into surrounding towns and emergency shelters. The Salvation Army has been assisting at many of the temporary camps and shelters, providing food and other necessities, and Amateur Radio has been maintaining important communication links--including one between various flood relief sites and a Salvation Army warehouse in Minneapolis.

ARRL Minnesota Section Manager Randy Wendel, N0FKU, reports that ARES, RACES, MARS and other members of the Amateur Radio community have been working together with the primary aim of assisting the Salvation Army and other emergency relief agencies. Some nearby areas have few or no hams, so some operators have volunteered to drive long distances to help out, he said. When an HF link was needed between Salvation Army relief sites and the

Minneapolis warehouse, a number of HF mobile operators from Minneapolis volunteered to make the nearly six-hour trip to the flooded region to help assure communication.

Wendel also reports that many hams are among the flood refugees who have been forced from their homes by what's being dubbed "the 500-year flood." Many homes have been damaged or destroyed, and the flooding was compounded by a large fire in downtown Grand Forks. The disaster also brought out many hams who had not previously been involved with emergency preparedness but suddenly found themselves in the midst of a major disaster--in some cases as victims themselves. He said this has served as a grim reminder that "disaster doesn't always occur from the comfort of our ham shacks." Wendel said hams must realize the importance of "having the capability to travel and set up a remote station at various locations."

North Dakota Section Manager Bill Kurtti, WC0M, reports that hams in that stricken state are providing backup communication for the various agencies involved in the flood-relief effort. "A book could be written about just the ham radio involvement," he said. Kurtti said the biggest communication obstacle hams are trying to help overcome is to coordinate communication among the various relief agencies that don't share one another's radio frequencies. "Ham flexibility can tie them together," he said. Links have been established on HF (75 meters), VHF and UHF, he reports. Several Amateur Radio clubs, the American Red Cross, the Salvation Army, the National Guard and FEMA have been active in dealing with the emergency in North Dakota. Kurtti said today (April 25) that in the northeastern North Dakota, the water is rising to record levels, and the cities of Drayton and Pembina may have to evacuate because water might overrun the dikes at those towns. Harold McConnell, WA0YSF, the RACES EC for Pembina County, North Dakota, reports that hams in that region have been supporting the local emergency manager, the National Guard, the US Coast Guard, the Air Guard and the Salvation Army. "We have portable remote stations operating from the City of Drayton and the City of Pembina EOCs," he reported. He said hams in North Dakota are also in contact with Canadian hams to the north who will get the flood waters leaving North Dakota. "The dikes in Pembina County are holding, but people are getting pretty tired and the water is still rising," he said. "We have assisted the Coast Guard and National Guard in setting up and installing some of their radio equipment in their vehicles and in the emergency operations center."

The ARRL's emergency 2-meter repeater has been shipped to the Forx Amateur Radio Club in Grand Forks, North Dakota, to serve as a backup to the single repeater still in operation as the Red River begins to recede and the massive clean-up and damage-assessment process begins. The repeater was previously loaned to the US Virgin Islands after a hurricane took out all amateur repeaters on St Thomas in 1995.

Morgan James, KF0EN, a meteorologist at the University of North Dakota, reports that Grand Forks ARES worked with emergency management agencies to install communication for dike patrols. The ARES group also set up a mobile 420-MHz ATV repeater in a van and was able to send live video back to the

emergency operations center of dike-building activity. He said ARES was running continuous VHF and UHF nets in the Grand Forks area to assist with flood efforts. "We expect to continue 24-hour operations until the Red River recedes significantly," James said.

Mike Woytassek, N0VGV, of Fargo, North Dakota, reports that even hams who were traveling in the area and were caught in the flooding have pitched in to help. "It has been truly unbelievable how the radio community has come together for this," he said. Woytassek, president of Red River Radio Amateurs, said hams helped Cass County emergency management officials with communication, passing traffic on water levels and road closings. The county lost its radio towers during the earlier ice storm and blizzard, but with the hams' ingenuity and physical labor, the county's radio system was back on the air the next day. According to Woytassek, area hams also jumped in to help the US Coast Guard to communicate with its rescue units in the Red River Valley from a temporary headquarters in Fargo. "The Grand Forks hams are victims as well as on the front lines working," he pointed out.

Other clubs pitching in include the Wahpeton Radio Amateurs in Wahpeton, North Dakota and the Cavalier County Amateur Radio Club, Cavalier, North Dakota. All involved with the relief and recover efforts in Minnesota and the Dakotas have praised the countless hams who have turned out as well as the degree of teamwork. "We should all be proud of the Amateur Radio community today," said Mike Woytassek. "Regardless of what club, regardless of what city, county or state, they came together and worked as one team."

President Clinton visited the flooded region this week to survey the damage. Wendel said he expected flood relief efforts would continue for several more weeks.

STS-83 REFLY IS A "GO" FOR JULY WITH SAREX ON BOARD

Word from NASA this week is that shuttle mission STS-83--cut short in early April because of a fuel cell problem aboard the spacecraft--will be reflown in July with the Shuttle Amateur Radio EXperiment--SAREX--aboard! The new mission will be dubbed STS-94. The space shuttle Columbia prematurely returned to Earth April 8 without making any of the scheduled QSOs with 18 schools in the US, the People's Republic of China, and Japan. Sixteen schools want to arrange new schedules for the July mission, which will again carry the microgravity science lab. Three hams were aboard STS-83: Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF. The same crew likely will be tapped for STS-94, set to launch on July 1 for a 16-day mission.

In the meantime, more QSOs of a scheduled round of ten MIREX school contacts have taken place with Jerry Linenger, KC5HBR, aboard the Russian Mir space station. Students at Holy Angels School in Dayton, Ohio, got a chance to chat with Linenger April 21. The ground station, W8DOZ, was running 35 W into a turnstile antenna. On April 23, students at Jerling Junior High School in Orland Park, Illinois--a Chicago suburb--had a 10-minute contact with Linenger. More than a dozen students got to speak directly to Linenger as an audience of 800 students and 200 visitors looked on. Nearly 2500

students in other schools also got to listen in.

Linenger and his cosmonaut flight companions, Mir-23 Commander Vasily Tsibliev and Flight Engineer Alexander Lazutkin, managed to restore one of two Elektron oxygen generators aboard Mir. The repair ended a serious problem for the Russian space outpost. The three used equipment shipped to Mir April 8 aboard a Progress resupply rocket. With the Elektron electrolysis system at least partially back in operation and the Mir's primary carbon dioxide scrubber also operational once more, the air aboard the Mir is healthier than it has been in weeks. Because the system is not producing oxygen at a rate sufficient for three crew members, however, the crew is supplementing the Mir's atmosphere with gaseous oxygen. The Mir also has a healthy stock of oxygen-generating candles to use if necessary. Wire service reports say the Mir crew has, for the time being, given up efforts to track down an elusive cooling system leak that's allowing ethylene glycol coolant to leak into the atmosphere of one spacecraft module.

NASA reportedly intends to go ahead with plans for astronaut Michael Foale, KB5UAC, replace Linenger in mid-May. Foale, who will arrive on the shuttle Atlantis, is scheduled to be replaced in September by astronaut Wendy Lawrence, KC5KII. The last US astronaut scheduled for a tour of duty on Mir is David Wolf, KC5VPF, in early 1998. The 11-year-old Mir space station eventually will be replaced by the International Space Station--a cooperative venture between Russia and the US.

NEW CLASS OF HAM-ASTRONAUTS

Ten of the 44 members of the 1996 Astronaut Candidate Class have become Amateur Radio Operators. Here are some of the call signs that might be showing up on future space missions:

AC Mission Specialist Laurel Clark, KC5ZSU
AC Mission Specialist Yvonne Cagle, KC5ZSV
AC Pilot James Kelly, KC5ZSW
AC Mission Specialist Daniel Burbank, KC5ZSX
AC Mission Specialist Charles Camarda, KC5ZSY
AC Mission Specialist Paul Richards, KC5ZSZ
STS-72 Mission Specialist Koichi Wakata, KC5ZTA
AC Mission Specialist Lisa Nowak, KC5ZTB
AC Mission Specialist David Brown, KC5ZTC
AC Mission Specialist Peggy Whitson, KC5ZTD
AC Mission Specialist Richard Mastracchio, KC5ZTE
STS-67 and STS-81 Mission Specialist John Grunsfeld, KC5ZTF
STS-73 Mission Specialist Catherine Coleman, KC5ZTH (trained to possibly take the place of Don Thomas, KC5FVF, on STS-83 when Thomas broke his ankle in January.)

--Matt, KC5BTL, and Joanna, KC5OCI, Bordelon

ARRL HAM-IN-A-WEEKEND CLASS A SUCCESS

An intensive weekend Amateur Radio licensing class at ARRL Headquarters in mid-April attracted prospective hams from as far away as Kansas, Texas and

Arkansas. By the time it was over, all 20 ham radio newcomers had passed their Technician exams and one Novice had upgraded to Tech Plus, and then still had time left to assemble for this class photo at W1AW! Overseeing the condensed training program was Ed Hammond, WN1I, an author and lecturer who's been a ham for 25 years. At the end of the sessions--which started on a Friday evening and continued through Sunday afternoon--all of the students took and passed their Technician exams, administered by a group of local volunteer examiners. In addition to the material required to earn a license, Hammond covered such topics as proper repeater and amateur operating procedures and demonstrated ham radio equipment.

W2AX ATTEMPTS TO FILL SHIPBOARD CW GAP

While aboard the Queen Elizabeth II for an around-the-world cruise earlier this year, Larry Amodeo, W2AX, of Manhasset, New York, found his CW ability suddenly in demand. On February 5, while operating /mm from the ship's ham radio shack--which is located in the QE2's radio room--the ship's radio operator called him over to see if Amodeo could copy what he thought was a distress call on 500 kHz--the old maritime emergency frequency. Amodeo said the ship's operator told him he did not copy CW much above 10 WPM, and there was not a telegraph key in sight (although Amodeo said he later found out there's one hidden away in case it's needed).

"We were about two days out of Fiji," Amodeo said. "At the time, I was working JAs on 20--a pileup." By the time he got to the ship's radio, the signal was gone. Amodeo went back to 20 meters, but the ship's operator called him over again after a few minutes when the distress signal reappeared. "It quit by the time I got there," he said. But the third time around, Amodeo managed to copy "4X" out of the noise. He surmised the vessel might be of Israeli registry, but he was not able to copy anything further. The next day, however, he learned his hunch was correct. An Israeli freighter had run aground off Fiji. Another ship intercepted the call and, fortunately, there were no casualties.

Amodeo has been a ham for 45 years and was a merchant marine shipboard radio operator himself in the late 1940s and early 1950s, but he'd never heard a distress call before. "When I sat down at that receiver, I was hit by a wave of nostalgia," he said.

SOLAR ACTIVITY REMAINS SLUGGISH

Solar seer Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity was down last week, with the daily solar flux falling below the 74 average for the previous 90 days. The average flux for the week was 7 points below the previous week, and the average sunspot number was down by about 26. The really active geomagnetic day was April 17 when the A index was 26, and the quiet day was the 20th when the K index dropped to 0. Although many have called for the end of the previous solar cycle, we still seem to be stuck in the doldrums. Solar flux should peak for the short term around or just above the mid-70s at the beginning of May, and then fall possibly below 70 in about three to four weeks from now.

Sunspot numbers for April 17 through 23 were 29, 13, 12, 0, 0, 12, and 13, respectively, with a mean of 11.3. The 10.7-cm flux was 71.7, 70.1, 69.9, 69.7, 70.1, 70.7, and 68.9, respectively, with a mean of 70.2, and estimated planetary A indices were 26, 16, 13, 4, 16, 18, and 9, respectively, with a mean of 14.6.

I would like to end this bulletin observing the recent death of Ed Tilton, W1HDQ. He wrote this bulletin for many years, and I took it over from him when he became ill during the peak of the last solar cycle.

ELMER C. "CHUCK" KUNZE, W0WVM, SK

Elmer C. "Chuck" Kunze, W0WVM, of St Paul, Minnesota, died March 18, 1997, after a lengthy illness. He was 77. Kunze was an early Amateur Radio space pioneer and a volunteer tracking station for the US Navy in the days when the Navy was using Vanguard rockets to launch satellites. He was very active in the original OSCAR program and the early years of AMSAT. He authored articles on circular-polarized antennas for QST in the 1960s.--John C. Fox, W0LER

GRANVILLE "GRANNY" KLINK JR, W3AFV, SK

Legendary broadcast radio engineer Granville "Granny" Klink Jr, W3AFV, of Silver Spring, Maryland, died March 18, 1997. He was 87. Klink spent most of his 61-year engineering career at WTOP in Washington, DC where he engineered broadcasts for the likes of President Franklin D. Roosevelt, Kate Smith, and "Amos 'n Andy." He retired in 1978 but remained a full-time consultant until his death. His wife, Marion, and three sons are among the survivors.

ROBERT G. OSBORN JR, N6MSO, SK

Aerospace pioneer and public service volunteer Robert G. Osborn Jr, N6MSO, of Malibu, California, died March 21, 1997 after a lengthy illness. He was 80. A native of Dayton, Ohio, he was inspired early in life by a close personal association with the Wright Brothers. After World War II, Osborn was among the pioneers in manned high-performance jet and rocket-powered aircraft for Douglas Aircraft. Osborn capped a 27 year aerospace career with his involvement in the Saturn/Apollo moon missions, including the historic first manned moon landing. He also was a volunteer community leader in the area of emergency preparedness and disaster communication, both raising and contributing thousands of dollars to support emergency communication efforts in the Malibu region. During the California wildfires of 1993, Osborn was serving at the Malibu Sheriff's Department disaster communication post when his own home was claimed by fire (see "California's Burning," QST, Feb 1994). He was selected the 1995 Sheriff's Department Volunteer of the Year by the Board of Supervisors of Los Angeles County and was awarded a certificate for distinguished service by Sheriff Sherman Block in 1996. Osborn was an ARRL member.--Jeff Reinhardt AA6JR

EUGENE BLACK, W2LL, SK

Well-known Long Island, New York, amateur and former CQ editor Gene Black, W2LL, of Glen Cove, New York, died March 31, 1997. He was 81 and had been an active ham up until the day of his death. "Gene was a great guy, a real

Elmer to many, and will be sorely missed," said ARRL Hudson Division Director Frank Fallon, N2FF. Black was an ARRL member. A New York City native originally licensed in 1931 as W2ESO, Black also was active in the Quarter Century Wireless Association and the Antique Wireless Association, and served as an advisor to the ARRL Hudson Division director. Black's career included stints as a shipboard radio operator and engineering positions with Raytheon and CBS. At one point during the 1950s, he designed receivers for Hammarlund, and in 1951, he served as the editor of CQ. Also during the 1950s, he worked with the late Bill Leonard, W2SKE, vice president of CBS News, as a writer-producer of an Amateur Radio program on the Voice of America that featured Leonard. From the 1960s until the early 1980s, he taught at New York Institute of Technology, returning to sea in 1978 as a radio operator on container ships at age 65. He retired in 1990. Black also was well-known on Long Island as a jazz guitarist. Donations to the Gene Black Memorial Scholarship Fund may be made in care of the ARRL Foundation, 225 Main St, Newington, CT 06111.--Frank Fallon, N2FF

GUY BLACK, W4PSJ, SK

Guy Black, W4PSJ, of Winchester, Virginia, died unexpectedly April 10, 1997. He was 77. Black was an active VHF and UHF operator and well-known within the VHF-UHF community. "Guy provided many with their first FM08 QSO on the higher bands, including myself on 1296 MHz. He will be missed by his many friends," said Steve Harrison, KO0U/1. Black was retired from a teaching position at George Washington University. He was a member of the ARRL, the Winchester Amateur Radio Club, the Shenandoah Valley Amateur Radio Club and the North Shenandoah DX Association. More than 50 hams from Virginia, Maryland and West Virginia attended an April 14 service for Black.

IN BRIEF:

* This weekend on the radio: The DX/NA YL Phone Contest, Helvetia Contest, Nebraska QSO Party, Ontario Party and QRP to the Field will fill your contest weekend. The ARRL VHF/UHF Spring Sprint for 432 MHz, is scheduled for April 30. See April QST, pages 98-99 for details.

* HQ job opening: ARRL Headquarters has a full-time opening for the position of Technical Information Service Coordinator. The position is in Newington, Connecticut. Candidates should have an associate degree in electronics technology or equivalent professional and amateur experience; an ability to deal with amateurs by mail, e-mail and telephone; an ability to work with outside volunteers; and broadbased familiarity with a number of modes currently in use by amateurs. Writing skills, and familiarity with PCs, databases and project management are important pluses. Starting salary is in the mid-20s. Send a resume and salary expectations to R. Boucher, ARRL, 225 Main St, Newington, CT 06111; fax 860-594-0298; e-mail rboucher@arrl.org. The ARRL is an equal opportunity employer.

* WW II sub radio rooms to be reactivated: At least a half dozen of the 20 World War II memorial submarine radio rooms will be reactivated on 20 meters

on Saturday, April 26, 1997, from 9 AM until 5 PM local time (approximately; times may vary from one location to another). Activity will center on 14.243 MHz (plus or minus 15 kHz). Among the submarines expected to participate are the Pompanito in San Francisco; the Batfish in Muskogee, Oklahoma; the Drum in Mobile, Alabama; the Cod in Cleveland, Ohio; the Requin in Pittsburgh, Pennsylvania; and the Becuna in Philadelphia, Pennsylvania. A certificate is available for working at least three subs. Send QSLs to Jim Flanders, W0OOG, 1539 California Trail, Plano, TX 75023-4300. A $1 donation to defray expenses would be appreciated.--Jim Flanders, W0OOG

* Morse special event set: The Poughkeepsie, New York, Amateur Radio Club (PARC) will operate W2CVT as a special event station May 3 and 4 to commemorate Samuel F.B. Morse, who spent part of his life at Locust Grove, an estate in the town of Poughkeepsie. Visitors to the station are welcome. Locust Grove is on US Rte 9, a couple of miles south of Poughkeepsie. Operation both days will be from 1200 to 2000 UTC. Frequencies are3703, 7103, 10103, and 14265 kHz. A certificate will be offered. QSL with sase to Donald F. Stein, W2PTF, 3 Little Rd, Wappingers Falls, NY 12590-3649. (Across the Atlantic, Samuel Morse's birthday will be celebrated Sunday, April 27, with an annual on-the-air gathering organized by the Morse Enthusiasts Group Scotland. The club's appropriate callsign is GM0RSE, and the station will be operating from the radio cabin on board the Royal Research Ship Discovery in Dundee.--RSGB)

* Correction: A story in The ARRL Letter, Vol 16, No 16 (April 18, 1997) contained incorrect information about the retirement from the ARRL of the late Ed Tilton, W1HDQ, who died March 1, 1997. Tilton stepped down as editor of the QST column "The World Above 50 MHz" in 1960, but he remained VHF Editor until he retired from the League in September, 1972.--Rick Lindquist, N1RL

* IRCI gets new owner, shorter name: George Cutsogeorge, W2VJN, and his wife, Georgia French, of Umpqua, Oregon, have purchased International Radio and Computers, Inc/Fox Tango of Florida. "The Florida operation ceased April 15, and we hope to be operational by May 1," Cutsogeorge said. The company will be known as International Radio. It will supply crystal filters, enhancement kits and newsletters initially, as IRCI did previously. Cutsogeorge said he hopes to update the filter line and add some new products. Cutsogeorge is chief engineer and 50% owner (with N3RD) of Top Ten Devices. For more information, call 541-459-5623 (9 AM to 1 PM Pacific Time, Tuesdays-Saturday); fax 541-459-5632; WWW (under construction) http://www.qth.com/inrad; e-mail inrad@rosenet.net.--George Cutsogeorge, W2VJN

* Astronaut Jay Apt, N5QWL, to head museum: Astronaut and ham Jay Apt, N5QWL, is leaving the astronaut corps to accept the directorship of the Carnegie Museum of Natural History in Pittsburgh, Pennsylvania, and expects to move to Pittsburgh this summer. The Carnegie is one of the largest natural history museums in the country, with a permanent staff of 85. "Every minute of the 21 years I've been a part of the space exploration program has been fascinating. Now it is time to give something back to the people who

sent me there," Apt said in a prepared statement. "I am thrilled by the chance to return to Pittsburgh and lead one of the best museums in America into the next century." Apt, 48, has flown four SAREX missions. He was born in Springfield, Massachusetts, but considers Pittsburgh his hometown. He has degrees from Harvard and MIT.

* KB2LUO to become NNJ SM on May 1: ARRL Northern New Jersey Section Manager-elect Roy Edwards, KB2LUO, will take over the office on May 1, two months before his regular term begins. Outgoing SM Rich Moseson, W2VU said he's stepping down because of other demands on his time. Moseson has been NNJ SM for eight years.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

I don't know if it was a book selling scheme by the ARRL as much as it was a power grab for a few "elite" amateurs who had operative control of the ARRL at the time. In my opinion it really hurt amateur radio and the trust the mainstream amateurs had in the ARRL. In any event it was a very bad idea for which we are still feeling the effects today. You know, sometimes the simple solutions are the best (yes I know, for every problem there is a simple... and wrong... solution) but your two tiered liscense approach makes a lot of sense to me. Now try to sell the concept...hi!

SB PROP @ ARL $ARLP017
ARLP017 Propagation de KT7H

ZCZC AP17
QST de W1AW
Propagation Forecast Bulletin 17 ARLP017
From Tad Cook, KT7H
Seattle, WA April 25, 1997
To all radio amateurs

SB PROP ARL ARLP017
ARLP017 Propagation de KT7H

Solar activity was down last week, with the daily solar flux falling below the 74 average for the previous 90 days. The average flux for the week was 7 points below the previous week, and the average sunspot number was down by about 26. The really active geomagnetic day was April 17 when the A index was 26, and the quiet day was May 20 when the K index dropped to zero. Although many have called for the end of the previous solar cycle, we still seem to be stuck in the doldrums.

Solar flux should peak for the short term around or just above the mid seventies at the beginning of May, and then fall possibly below seventy in about three to four weeks from now.

Sunspot Numbers for April 17 through 23 were 29, 13, 12, 0, 0, 12 and 13 with a mean of 11.3. 10.7 cm flux was 71.7, 70.1, 69.9, 69.7, 70.1, 70.7 and 68.9, with a mean of 70.2, and estimated planetary A indices were 26, 16, 13, 4, 16, 18, and 9, with a mean of 14.6.

I would like to end this bulletin observing the recent death of Ed Tilton, W1HDQ. He wrote the propagation bulletin for many years. I took it over from him when he became ill during the peak of the last solar cycle.

SB SPCL @ ARL $ARLX010
ARLX010 Hams continue flood relief assistance

ZCZC AX10
QST de W1AW
Special Bulletin 10 ARLX010
From ARRL Headquarters
Newington CT April 25, 1997
To all radio amateurs

SB SPCL ARL ARLX010
ARLX010 Hams continue flood relief assistance

Ham radio continued to have a critical role in emergency relief and recovery efforts along the Red River, where flooding overtook the cities of Grand Forks, North Dakota, and East Grand Forks, Minnesota. Most area residents--an estimated 50,000 people--were evacuated into surrounding towns and emergency shelters. The Salvation Army has been assisting at many of the temporary camps and shelters, providing food and other necessities, and Amateur Radio has been maintaining several important communication links. Minnesota Section Manager Randy Wendel, N0FKU, reports that ARES, RACES, MARS and other members of the Amateur Radio community have been working together to help the Salvation Army and other emergency relief agencies.

North Dakota Section Manager Bill Kurtti, WC0M, reports that hams in that stricken state are providing backup communication for the various agencies involved in the flood-relief effort. He said the biggest communication obstacle hams are trying to help overcome is to coordinate communication among the various relief agencies that don't share one another's radio frequencies. ''Ham flexibility can tie them together,'' he said. Links have been established on HF (75 meters), VHF and UHF, he reports. Several Amateur Radio clubs, the American Red Cross, the Salvation Army, the National Guard and FEMA have been active in dealing with the emergency in North Dakota. Kurtti said April 25 that in the northeastern North Dakota, the water is rising to record levels, and the cities of Drayton and Pembina may have to evacuate because water might overrun the dikes at those towns.

Harold McConnell, WA0YSF, the RACES EC for Pembina County, North Dakota, reports that hams in that region have been supporting the local emergency manager, the National Guard, the US Coast Guard, the Air Guard and the Salvation Army. He said hams in North Dakota are also in contact with Canadian hams to the north who will get the flood waters leaving North Dakota.

The ARRL's emergency 2-meter repeater has been shipped to the Forx Amateur Radio Club in Grand Forks, North Dakota, to serve as a backup to the single repeater still in operation as the Red River begins to recede and the massive clean-up and damage-assessment process begins.

Morgan James, KF0EN, a meteorologist at the University of North Dakota, reports that Grand Forks ARES worked with emergency management agencies to install communication for dike patrols. The ARES group also set up a mobile 420-MHz ATV repeater in a van and was able to send live video back to the emergency operations center of dike-building activity. He said ARES was running continuous VHF and UHF nets in the Grand Forks area to assist with flood efforts.

Mike Woytassek, N0VGV, of Fargo, North Dakota, reports that even hams who were traveling in the area and were caught in the flooding have jumped in and assisted. Woytassek, president of Red River Radio Amateurs, said hams helped Cass County emergency management officials with communication, passing traffic on water levels and road closings. area hams also assisted the US Coast Guard in communicating with its rescue units in the Red River Valley from a temporary headquarters in Fargo. ''The Grand Forks hams are victims as well as on the front lines working,'' he pointed out.

Other clubs pitching in include the Wahpeton Radio Amateurs in Wahpeton, North Dakota and the Cavalier County Amateur Radio Club, Cavalier, North Dakota. All involved with the relief and recover efforts in Minnesota and the Dakotas have praised the countless hams who have turned out as well as the degree of teamwork. ''We should all be proud of the Amateur Radio community today,'' Woytassek said.

1761. 2m/70cm in Germany

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-25 00:00:00 UTC
From: Dennis Mueller <dennism@cup.hp.com>
Message-ID: <01bc51c1$03cc9b50$3abd0d0f@dm70690p>
Source record: 199621

I will be spending a month in Germany and taking my (US) 2m/70cm FM HT.
I already have a temporary license from Germany. Can I use my HT? I know
that a tone burst is required to bring up repeaters (I don't have the tone
burst
generator but can wait until the repeater is already up), and that the
spacing
is different.

Can you help me to understand the technical and operating differences
between
the US and Germany? Is there a location where I can get a German repeater
listing? I speak a little German, but it is limited to non-technical terms.

73,
Dennis N6IH

1997 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 3
until 2000Z May 4, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county
lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single
Multi-multi
classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for
QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange
report
and state/province/DXCC country. Non CT stations work CT stations only.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low
end;
Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150,
144.200,
146.580. RTTY - Normal RTTY Bands . All bands (HF,VHF, UHF) except
WARC bands count.

Score one point per phone or RTTY QSO and two points per CW QSO.
QSOs
with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/
provinces/Connecticut
counties worked (DX only one multiplier); others multiply by Connecticut
counties worked (work CT stations only).

Plaques and certificates (100 point minimum). Special certificate
for
working all 8 Connecticut counties.

Send entry and SASE for results by June 3 to CARA, P.O. Box 3441,
Danbury CT 06813-3441

If memory serves...the 2E26 will work but at reduced power output. I tried this in a Heath DX40 a long time ago and got about 20 watts out of it.

A real reach this time Jeff. The question was, "Where in the .swap FAQ
are threats covered. You threatened the guy. I did not do not support
him I poke fun at at you because you are su full of yourself or full of
something anyway.

As to this fellow selling inoperative gear. We only have your word for that and based on your recent exchanges with Carl I have a little problem accepting your word on any subject just now. I guess I'm not too confident in your talent with any digital mode, you being a code bigot and all.

If you must know, my experience with mail fraud was being part of a group of hundreds of complaintants against a firm. Thousands perhaps millions of dollars were involved, nothing happened. Your stupid modem, mail fraud? Get a life. I hope the guy told you to get stuffed and perhaps he did, after all we only have your word he is refunding your money.

Jerry

1nF = .001uF = 1000pF

Thus the original poster, philip de cadenet, is looking for something
with 5000pF and 10,000pF (ie .01uF) capacity.

While these do seem rather large for even 160Meter equipment, there is
no way you will find them in 2M equipment. Considering how large in
capacitance they are, I do believe that they will be hard to come by.
Which is precisely why this isn't a run of the mill question.

at>So now I've started it huh....ok flames on!
at>ED AA6NI

No Flames from me ED! You made some good points, especially about courtesy. I feel that all license courses (books,tapes, etc...) should emphasize courtesy and operating procedures. I know that there are some people coming into the hobby that badly need some elmering, but if you really want to see some "lower grade amateurs" tune around on 80 meters any night. The sad thing is, most of the hams there who exibit such a lack of courtesy and brains, are Extras who have been licensed for many years. In many cases the new ham just needs someone to befriend them, and show them the proper way to conduct themselves.

Interesting. If I remember correctly, a stock HW-100 has two 6146A's
running in push-pull. What sort of modifications do you have to
make to drop a single PL36 in there?

Tim.

1775. Amateur Radio Files

Newsgroup: rec.radio.amateur.misc

From: clint.bradford@atdbbs.com
Message-ID: <97042517402214544@atdbbs.com>
Source record: 199489

ATTENTION to Details BBS is currently offering these Amateur Radio-related files via its free EMail/FTP service:

KEYWORD DESCRIPTION
==========

GPS-FAQ1 S. Abell-Smith's "Mini-FAQ" on GPS information sources. 4K/TEXT

GPS-FAQ2 Peter Bennett's GPS FAQ v8. More detailed information and pointers to GPS sites. 18K/ZIP

GPS-FAQ3 From Garmin's WWW Site: "What IS the GPS?" 8K/ZIP

MAC-HAM List of 75+ Amateur Radio-related files for the Mac available on ATD BBS. 10K/TEXT

NECUTILS Those infamous, difficult-to-locate NEC laptop setup utilities. 17K/ZIP

NICADS Informative article on the care and discharge/charging cycles of NiCad batteries. 14K/TEXT

RFI-TELEPHONE ARRL FAQ dealing with RFI and telephones. 22K/TEXT

WRC-97 As long as the threat to 2M and 440MHz continues, we will update this information package of texts relating to the "Little LEO / WRC 1997" issue. 29K/ZIP

HELP Returns text File with all active KeyWords. 12K/TEXT
==========

How to Use the FTP Server at ATTENTION to Details BBS

The ATD BBS FTP Service is offered as a cost-effective means to obtain information and files from our Bulletin Board System (BBS) - using Internet E-Mail as the method of exchange. Using our FTP Server is as simple as addressing an Internet E-mail message to

ftp@atdbbs.com

containing one or more KeyWords. Multiple KeyWords can be combined in a single Message - but it is very important that there be only ONE KEYWORD PER LINE!

EXAMPLE: You see from the above list of KeyWords that you want a copy of our textfile on NiCad batteries and our Help file. Address your Internet E-Mail...

TO: ftp@atdbbs.com
SUBJECT: [anything here is OK]

...and write the corresponding KeyWord, NICADS, as the ONLY word in the FIRST LINE of your message. And write HELP on the SECOND LINE of your message. That's all there is to it!

==========

>got weekly chess games with hams in the Cook Islands and the Marquesas.

Can you legitimately call that "working Dx"? Seems to me that routine scheduled operation isn't what's classically meant by "Dxing", regardless of the distance spanned. For example, I routinely operate satellite, where the distance traversed by the signal up and back is roughly twice the circumference of the Earth, yet I don't consider it "Dxing". Most other amateurs don't consider it as working Dx either.

It seems to me that "Dx" has to have a gaming aspect in order for amateurs to call it "working Dx". When I used to keep a schedule with KC4USA to run phone patches for the folks down there, we never considered that Dxing. But if I were to exchange signal reports with someone I happened to hear on the band from VK land, many would consider that working Dx.

Hi Ed - There is an email list devoted to CW. I'm including the subscription instructions below.

ZUT!
Jeff KH2PZ / KH6

Welcome to the cw mailing list!

Please save this message for future reference. Thank you.
If you ever want to remove yourself from this mailing list,
you can send mail to <Majordomo@qsl.net> with the following
command in the body of your email message:

unsubscribe cw your@email.address.here

If you ever need to get in contact with the owner of the list,
(if you have trouble unsubscribing, or have questions about the
list itself) send email to <owner-cw@qsl.net> .
This is the general rule for most mailing lists when you need
to contact a human.

****

CW is a mailing list (reflector) devoded to CW (International Morse code)
use in amateur radio activities. In particular, we encourage conversation on:

* Learning and teaching CW (tapes, programs, etc.)

* Keys, bugs, and keyers

* CW detection and receiving (filters, DSP, coherent CW, etc.)

* Breakin (QSK) equipment and skills

* Signal shaping and quality

* Portable CW operating issues

* any other non-inflammatory issues re CW

To be added to the CW mailing list, send email as follows:

To: list-request@qsl.net
Subject:

Body: subscribe cw

To be deleted from the CW mailing list:
send email as follows:

To: list-request@qsl.net
Subject:
Body: unsubscribe cw <your email addr>

To post items to the reflector, send email as follows:

To: cw@qsl.net

If you hve any questions or need assistance contact:

k7gt@qsl.net

See you on the reflector AND on the air!

73 es GL de K7GT

1778. Re: DESPERATE ! For compressi

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-26 00:00:00 UTC
From: len.anderson@mogur.com
Message-ID: <9704251733271330@mogur.com>
Source record: 199492

PH>Subject: DESPERATE ! For compression trimmer source.

PH>Can some kind soul point me to the contact information for a
PH>manufacturer of 5nf & 10nf high quality compression trimmers.
PH>These are for a 160m mosfet tx design that I am working on, please help.
PH>An e-mail direct would be greatly appreciated: phil@two-way.demon.co.uk

A USA source is Marlin P. Jones and Associates in Lake Park, Florida.
www.mpja.com on the Internet. While their only shipping and ordering
instructions are for the USA, they might ship out-nation. They also
have an e-mail address of mpja@mpja.com.

Page 104 of their Catalog 97-5A indicates their stock number 1338-VC,
2.5 to 10 pFd, US$0.75 each, might help. Minimum order is US$15.

Note: Having been in the electronics design business for 37 years,
I've never seen any compression (or any other) trimmer higher than
1200 pFd (1.2 nFd). Those were made by the U.S. firm of Arco-ElMenco
at some time around 1972. The highest value variable capacitor seen
was a 5-gang 480 pFd maximum per gang unit circa 1946.

Sprague-Goodman makes a number of trimmer capacitors in small pFd
ranges. These might be available through DigiKey in Thief River
Falls, Minnesota, USA. DigiKey has a website at www.digikey.com.
You might access them about export orders.

1779. FT-890 AT Auto Tuning HF Rig Like New $800.00

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-26 00:00:00 UTC
From: don.peaslee@ncn.net
Message-ID: <33616d36.50286756@news.netins.net>
Source record: 199493

Lowered Price. Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner. Extremely light use. Approximately 30 total contacts is total usage. In perfect shape, brand new with all the original boxes and packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four microprocessors provide the easiest possible control interface. Two independent VFOs for each band (20 total) hold their own frequencies and modes as well as clarifier offsets and repeater shifts. 32 memories store data for the VFOs giving a total of 84 independent sets of frequency, mode and other selections. Noise blanker, all mode squelch, 4 function multimeter, and AF speech compressor with adjustable IF passband shift. Iambic memory keyer for CW with dot-dash memory.

Top panel heatsink allows this radio to run cool at all times and with an internally switched fan, it allows full transmitter output without any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $800.00, buyer to pay shipping.

Subject: voice procedure - newbie

Hi,

I am a newbie to radio communications.
I have check the faq on radio communications. I have some notes in the faq
on phonetic alphabets.

However, I can't seem to find any notes on voice procedure. Can someone
point me to a source of reference?

I am a teacher in charge of the PA/AVA crew that use the walkies a
lot. However, they are not practising proper voice procedure and I will
like to get the notes so that I can get them started on it.

Thank you for your time.

Regards,

Robert Yeo

1783. ARRL ENY Section Convention This Sunday

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-26 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pTH5GyD.sanderman@delphi.com>
Source record: 199497

The ARRL Eastern New York Section Convention, combined with the spring hamfest of the Mt Beacon Amateur Radio Club, is this Sunday, April 27, 8:00 AM to 2:00 PM, at John Jay High School in Fishkill, Dutchess County. Clubs and Public Service will be the focal points of this year's event.
Ongoing forums throughout the day will include NWS SKYWARN weather spotters' training, packet traffic handling, and an FCC license examination session. NWS will present a major display in conjunction with NTS/packet volunteers demonstrating the use of APRS in severe weather spotting.
Scheduled forums will include a number of presentations from section staff and an ARRL Forum with Hudson Division Director Frank Fallon, N2FF, Vice Director J P Kleinhaus, W2XX, division staff, and representatives from ARRL Headquarters in Newington. Over a dozen ENY clubs will be represented with displays of their activities.
Admission is $5.00 (spouses and kids are FREE). Tables are $8.00 in advance, $10.00 at the gate. Tailgating spots (with your own table) are $6.00 each. Talk-in will be offered on the 146.97 (-600 kHz) Mt Beacon repeater.
For additional information, contact Ken Akasofu, KL7JCQ, via internet email at ken.akasofu@bbs.mhv.net or by landline at 914.485.9617.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #213 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 2-May:
-
1. Hams Continue to Assist Flood Relief Efforts in Upper Midwest
2. RAC Forms Committee to Draft WRC-97 Position Paper
3. SAREX Gets Okay for STS-83 Reflight, Dubbed STS-94, in July
4. AO-10 Experiencing FMing, AMSAT Says Solar Panels Underexposed
5. One Ham's Story-Interview with Gene Wicklund, WA0ZOK, in Fargo
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Weekly Propagation Forecast
8. Upcoming Special Event Station Report
9. "The RAIN Dial-up" from Chicago
10. British and Dutch Researchers Make a Frog Float
-
Funding to defray our transmission and production expenses has been
provided by a grant from Chris Huber, N6ICW, of Sacramento,
California, where "This Week in Amateur Radio" is heard Saturdays at
6:00 PM on the N6ICW repeaters, on 147.195 MHz in Sacramento, and on
145.15 MHz in South Lake Tahoe, serving Sacramento, the San
Francisco Bay area, Tahoe, Reno, and Carson City.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
amateur radio club or repeater operator if "This Week in Amateur
```

Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

I've wondered about this in regard to my GT-550 running two 6LB6's
in parallel; I'd love to run just a single one. Even though it's
capable of running 550W input, I usually idle along at no more than
50W. No need to have both 6LB6's burning while running QRPo (or is
that QROp? ;)

There you go! It will start with upgradeable firmware! <we can hope!>

Collectively, the amateur radio market seems to be a largely unrepresented group of consumers - and ironic in that we have this big interest in "communications" but we seem to be victims of not "communicating" what we really want to the folks that design and make our toys.

So we get pretty neat toys - that sell for fairly big bucks - that many people can then modify to make SERIOUS improvements on...why is THAT?

The stock radios never have built-in diagnostics - we have to trust on the air reports and our EARS to figure out if radios are playing up to snuff.

The stock radios never have the best components - so we can pay hundreds more and get the better filters, diodes, mods, etc. Can you imagine doing this with audio gear?

We need an amateur radio consortium that guides the manufacturers based on our collective inputs since their marketing falls short of what we seem to want and need. Gimme an AMEN and a URL and I'm there!

Of course you are, Burt. You have nothing of substance to say yet you say
it repeatedly. You grouse, but you make no positive contribution. So of course
you are the "typical" ham you always talk about.

1795. FS: Alinco DR-610T dual band

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-26 00:00:00 UTC
From: stewart@wt.net
Message-ID: <3362219d.155089064@news.wt.net>
Source record: 199509

I have an almost brand-new Alinco DR-610T for sale. It is in absolute mint condition, with all original box, packing supplies, manuals, etc. I just bought a new car, and I don't want to install a mobile radio. This radio is a steal at $425.00 plus shipping.

I also have a Larson NMO 2/70 dual band antenna with a Larson trunk lip mount for $60.00, or I'll sell both for $475.00.

If you are interested, reply to: stewart@wt.net

In case you're not familiar with the radio, it is the top of the line Alinco dual band and comes jam packed with all sorts of amazingly cool features. For example:

120 channels (30 UHF, 30 VHF, and 3 "sets" of 20 channels each which can be mixed UHF and VHF.

Remote control of most of the functions of the radio (e.g. cross-ban repeater functions) with DTMF tones from a handie-talkie (and from the mic as well, of course).

Full and flexible cross band repeater.

9600 baud packet ready.

"Channel Scope" technology allows you to monitor adjacent channel OR frequency activity (VHF only, UHF only, or both at once!!!).

Detachable remote-mount faceplate.

Can be used UHF/VHF, VHF/UHF, UHF/UHF, or VHF/VHF.

Internal duplexer.

CTCSS encode.

Expanded VHF and UHF receive.

Cross band repeat:

Power: VHF 50/10/5, UHF 35/10/5.

This is a GREAT radio... Let me know if you want it!

>So we get pretty neat toys - that sell for fairly big bucks - that
>many people can then modify to make SERIOUS improvements on...why is THAT?

I think lots of amateurs *like* that. Since most don't build anymore, having "mods" to do is as close as they get to actual construction.

>The stock radios never have built-in diagnostics - we have to trust
>on the air reports and our EARS to figure out if radios are playing up
>to snuff.

Now this is something the manufacturers could address. There's no reason modern radios can't have built in diagnostics. This would be a major plus, especially for amateurs without a lot of test equipment. I would really like to see this in an amateur radio. It should work on two levels. There should be an ordinary power on self-test which checks the major radio subsystems. And there should be a menu driven exhaustive diagnostic (probably coupled with a probe the operator is instructed to place on various test points) for detail level troubleshooting. The equipment I work with every day is built that way, there's no reason amateur equipment can't be built the same way.

>The stock radios never have the best components - so we can pay hundreds
>more and get the better filters, diodes, mods, etc. Can you imagine
>doing this with audio gear?

Sure! In fact that's the rule for audio gear. Most of it is as cheaply built as possible, and you pay major big bucks to get higher quality. I can understand designing amateur radios to a price. There are amateurs who would balk at paying what it would cost for top of the line quality. If you want that, there are commercial grade radios from Harris, Watkins-Johnson, Rhode&Schwartz, etc which will give it to you. Most amateurs won't pay for that.

>We need an amateur radio consortium that guides the manufacturers
>based on our collective inputs since their marketing falls short of what
>we seem to want and need. Gimme an AMEN and a URL and I'm there!

That's actually not a bad idea. Why don't we start a thread on what features we think amateur radios should *really* have? Maybe the manufacturers will take the hint. When we started complaining about IMD and low intercepts,

they did pay attention and corrected some of the deficiencies. And of course the IC-706 MkII is the result of a lot of grousing, mods, and experimentation we did to address what we saw as major shortcomings of the original. It is a pity Icom didn't see fit to offer an upgrade path, as Ten-Tec normally does, but at least they did fix several of the things we didn't like about the original IC-706 in the new model.

Looking to maybe buy the Kenwood TS570S HF/ 6 meter rig for back up and to experiment with 6 meters. I already know about the Yaesu FT920, Icom 706/706 MKII , and Alinco version of this rig and everything else, including the troublesome 756 Icom so please I am just intrested in reports from current and past users of this rig only. I am really not intrested in reports on the TS570D either as I have read the reviews and seen the specs and have seen enough post on news groups to see how bad or good it is. I really just want to hear about the TS570S and hear both the pros and cons and troubles owners might have had and how they wer dealt with. I would appreciate any and all replys on the TS570S only and thank you. 73, DE-KS4HK, Steve

I don't think you can get a business license for GMRS anymore.

For the last few years new licenses have only been issued for personal
(family) use.

Hi there,

In 1992 I obtained my full ZS licence and have been very active on the bands. Also very active filling out QSL cards and sending them off either direct or via the bureau.

And the return on all the QSL cards I have sent out? Not enough to qualify for the DXCC. I have 76 countries confirmed for DXCC. About 14 US States confirmed. But it seems to me that there are many QSL card collectors out there. They enjoy receiving cards but DO NOT ENJOY sending out cards.

If you have worked ZS4BS and received a QSL card and not yet returned one - how about it? If you have worked ZS4BS and NOT received his card - well let met know and I will ensure that it is in the post to you. [please supply your direct address for express service].

You can QSL via the bureau, or direct to Dennis Green ZS4BS, P.O. Box 12104, BRANDHOF, 9324, Rep of South Africa.

E-mail : dennig@netactive.co.za
Packet : ZS4BS@ZS0BFN.OFS.ZAF.AF

Many years ago, if my memory is not playing tricks on me, it would have been difficult to drop Morse Code as a requirement for an amateur radio license, since the only frequencies on which Novice class amateurs could operate were low frequencies, having CW as their only available form of modulation.

Since the United States is one of the world's most amateur-friendly nations, is it not likely that in much of the world, only more limited frequencies are available to amateurs, and this situation is still the case?

It did NOT happen it was a typical Burt troll. Burt, the guy who
started this apparently hates himself and because he is a ham he hates
hams also. Making outragous accusations is the stock in trade of
"Josef Gobbels Fisher" master of the big lie. Pay it no mind.
Consider Carl a bit over the top also. He has been beaten up so many
times by the CW forever crowd he has turned bitter. Burt's original
post was a hoax and Carl should never have bitten. I don't believe any
responsible person ever wanted to endanger a shuttle crew for a stupid
OSL card. Remember ther are no tests for truth or inteligent life on
the internet.

>:
>:Terry
>:KI7M
>
>You are ignoring the fact that it is the amateur operator that is causing
>all the trouble.
>Have some thought for the neighbour.

It is not entirely the radio amateur "causing the problem". The radio amateur should do everything he can to eliminate the problem, but the source is often poorly designed equipment owned by the consumer who is being interfered with. It certainly helps if the person experiencing the interference is willing to cooperate! Something may actually be accomplished in this case! And my assumption is if the person does not want to cooperate, then that person has some hidden agenda or some other reason for complaining.

I worked in the home electronics repair business for 10 years. During that time I heard HUNDREDS of interference complaints and requests to assist. Roughly 25% were complaints of interference from radio amateurs. Another 30% or so from CB interference. The other 45% were complaints from connercial radio and TV stations!

A local FM station moved its transmitter from the very edge of town into the center of the city. Immediately they started getting THOUSANDS of complaints from people who experienced interference on their phones (both cordless and corded), stereos, VCR's, CD players, phone answering machines, etc. These machines had NO shielding or bypass for RFI. Often I could correct the matter by lining the inside of the plastic case with aluminum foil. Sometimes I just could not cure the RFI in a piece of equipment. My advice to the consumer in this case (and this was not as a radio amateur, it was as a professional service person) was to replace the unit with a different brand. Most of the time this worked.

During the 10 years I worked at this repair shop I got to see practically every type of home consumer electronics available in the USA in the last 20 years. The older equipment had considerably more shielding built in than the newer stuff. I think it's just a case of "cutting corners" by the industries. The newer equipment is PITIFUL when it comes to RFI shielding. It's NON-EXISTENT!

Radio Shack and others DO make some "bullet-proof" (RFI-proof) phones. I have one. I do not experience ANY RFI on it on any band under any power run from my own shack. The phone is a bit more expensive. You get what you pay for. And when I demonstrate that I am not experiencing any interference at a distance of 50 or 100 feet from the antenna, neighbors cannot but admit that their phones are at fault (unless they have a hidden agenda as mentioned above).

>
>jw
>

It depends on what the guy at the other end has. As you noted, in many cases it does not take a massive amount of power and huge antenna array to work AU (or even EME for that matter) if the station at the other end has a massive antenna array and good preamp on receive.

The VE3ONT EME operation a couple years ago from the 140-foot dish was hearing EME signals from other stations running 100 watts and a single long-boom Yagi on 2 meters; as little as 25 watts to a couple loop Yagis on 1296 would also net an EME QSO.

I beg to differ. Carl showed up claiming that amateur radio is a technical hobby and anyone not interested in the technical aspects of the hobby were nothing but CBers. He then professed that the pro-CW crowd are a bunch of bigots because they considered anyone without high-speed CW not to be a "real ham". Carl has been consistantly beaten up because of his blatent hypocrisy, not because he has an opinion one way or the other on CW testing.

Eimac type YC156. This is the same basic tube as a 4CX5000. It was designed for the medical industry and has a rating of 6500 volts at 4 amps when used in a pulsed mode. This tube was used in applications to 35 mc but will operate at higher frequencies. See the data sheets on the 4CX5000. No socket is necessary for this tube, it will mount in a 3 1/2 inch diameter clear hole, and the grid ring will bolt to the chassis. Height is overall height is 8 inches.

Tube is used but emission is guaranteed for full output. $325 each.

This will change the topic completely... but licensing system in japan is interesting. Most basic license without CW will allow you to operate 180m band and so on. most advanced ? you have no power restrictions. for more info, visit:

A typical ham would ignore their children if there was a new one on the
air.
And certainly hams do not care about the lives of non relatives.

>available form of modulation.

Not exactly true. Novices were limited by regulation to using OOK Morse on HF (they had voice on part of 2m originally), but the frequencies that they were assigned were *not* Morse-only. They were (and are) in the *data* seqments of 80m, 40m, and 15m. The only Morse-only frequency allocations for US amateur radio are 50.0-50.1 MHz and 144.0-144.1 MHz. Novices aren't allowed to operate there, but code test free Techs are. Ironic, eh?

In general, OOK Morse is not *mandated* in any amateur spectrum (with the execptions noted above). Individual license *classes* may be restricted to OOK Morse usage in certain segments, IE Novice and Tech Plus are restricted to using only OOK Morse in subbands of the data segments on HF, but other license classes can use other modes there. In other words, it is perfectly legal for a General class or above to run PACTOR in the Novice subbands, though it generally isn't polite to do so. There is one amateur band where use of OOK Morse is *forbidden*. That is the 219-220 MHz band where only data emissions are permitted.

>Since the United States is one of the world's most amateur-friendly
>nations, is it not likely that in much of the world, only more limited
>frequencies are available to amateurs, and this situation is still the
>case?

The US has the most complex and baroque by mode subband licensing in the world. Many other countries don't subband this way. They leave mode choices and segregationist mode assignments within their amateur bands up to the amateurs involved. These "gentlemen's agreements" typically put wide bandwidth modes toward the upper end of a band and narrow bandwidth usages near the bottom of the band, mostly to conform to US practice (which has has historically dominated amateur radio in terms of power used and numbers present on the bands), but those separations aren't built into their regulations or enforced by their governments. (Canada is an example of this sort of regulation.)

Hey, Burt, why didn't you mention the DX nets while you were at it.
Talk about your turkey shoots! Its not about how well the DX station can
hear you but whether the net control taking the list can. As long as the
DX station can tell there is a signal there, the NC will coach him
through the contact. Give me a good old-fashioned pileup any day. At
least there is some sport in working the station. And before anyone says
anything about only the "big guns" being able to bust a pileup, I have
worked over 140 countries using 100 watts into dipoles at 30 ft. or
ground and roof mounted verticals. Heck, I even did several of them
while mobile.

DX clusters may seems a little unfair to some, but, most of the
time you will still have to bust the pileup. Besides, before the
clusters exsisted, there were DX spotting nets on VHF. This is more like
a fishing boat captain watching the other boats and monitoring the VHF
Marine radio to find where the fish are biting. Just because you know
where they are does not mean you can catch them. It still takes skill
and a little luck.

1857. Looking for NW U.S. repeater recommendations

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-27 00:00:00 UTC
From: mjr@crl.com
Message-ID: <5k0joe$npu@crl.crl.com>
Source record: 199571

Hello... In a month or so I'll be traveling from the S.F. bay area to Coeur d'Alene ID. I've checked the repeater book and find over 200 listings that might possibly be in the path of my trip. More if you include the 70cm band, etc. What I'm looking for is a couple of dozen (at the most) heavily used high-level repeaters to help me cover the trip. I have California frequencies already. The rest of my trip will take me...

I-5 through OR to Portland, then east on Rt. 84. Across the Columbia river to Pasco and up 395 to Spokane, then East again on 90 to Idaho...

I will be traveling with 2M, 70cm, and 1.2G, though I don't expect much from the last.

If there is anyone in OR, WA, or ID who would care to make some recommendations for me, I would be happy to have them. My goal is to use the radio to have some company on the trip, and also for emergencies of course.

Please post here to rec.radio.amateur.misc under this subject, or send me email..

Thank you.

Again, and as always, we thank you. This ends the closed circuit with
Newsline report number 1028 for release Friday, April 25th, 1997 to follow.

(*****

The following is a QST

The ARRL asks the FCC to let the private sector handle ham radio
interference cases, Congress may allow local regulation of 11 meter CB and
ham radio relief efforts continue along the flood swollen Red River. These
stories and more on Newsline report number 1028 coming your way right now!

(*****

FCC ASKED TO PRIVATIZE HANDLING OF MALICIOUS INTERFERENCE

Frustration with amateur radio rules enforcement prompts the ARRL to
take aim at radio jammers. The League is asking the FCC to privatize
enforcement of serious Amateur Service rules violations.

In a petition for rulemaking filed March 28th, the League asks the FCC to change its rules. Specifically, the League wants members of the volunteer Amateur Auxiliary to be able to present evidence of malicious interference violations directly before the FCC's Chief Administrative Law Judge.

The Judge would be authorized to determine if the complainants have a valid case, to issue show cause orders, and to designate complaints for hearing.

The League recommended that the FCC capitalize on the volunteer resources available through the Amateur Auxiliary to relieve the evidence gathering burden in such cases. If these rules changes are approved, the League says it will likely help members of the Amateur Auxiliary prepare and submit complaints and in presenting cases during administrative hearings.

The ARRL suggests that a series of visible, successful enforcement actions would deter rules violations and promote self-regulation.

The ARRL also suggests that some FCC policies hinder timely, effective enforcement. Because current FCC policy requires the Commission to independently corroborate evidence Amateur Radio volunteers gather, the League says the Commission actually hampers effective enforcement.

The League says the Commissions policy often acts as an absolute obstacle to any enforcement activity whatsoever," and it demoralizes volunteers, who view their efforts as wasted.

(Via ARRL)

(*****

CONGRESS V.S. 11 METER CB

Frustration with interference from CB operators could lead to the end of the 11 meter Class D Citizens Radio band as we know it. That, because of a bill being introduced in Congress. The bill would turn oversight of Citizens Radio Service operations over to states, cities and other local regulators. They would have the power to remove CBers from the air who interfere with television reception or with other home electronics.

The bills sponsor is Wisconsin Democrat Russel Feingold. It would amend the Communications Act to allow state or local governments to enforce regulations prohibiting the use of CB equipment not authorized by the FCC. That would include high power linear amplifiers as well as out of band transmitters.

In presenting his bill, Feingold tells Senate colleagues that he has received RFI complaints over the past several years from numerous Wisconsin communities. He calls his bill a common sense solution to a very frustrating and real problem which cannot be addressed under existing law.

Feingold's bill preserves the federal preemption of all other telecommunications matters. It also excludes all other FCC licensed

services, including Amateur Radio, from state or local oversight.

Can 11 meter users defeat the Feingold proposal? The chance of that appears slim. Unlike other services, CB has never had an effective Washington lobby. Nor is it organized around an activist national society that protects its interests. If Feingolds bill becomes law, states and cities may act quickly to ban as many CBers from the airways as they legally can.

(Via ARRL, Usenet, AoL)

(*****

GREAT PLAINS FLOODS

Amateur radio operators continue providing communications for relief workers in the wake of those devastating floods in Minnesota and the Dakotas. Most of the damage is along the shoreline of the Red River in and near Fargo, North Dakota:

As the Fargo-Moorhead area sees some relief, problems move north a few miles to the city of Grand Forks. Out are all normal lines of emergency and public service communications. Here, ham radio is helping out as major flooding of biblical proportions continues. Steve Carbno, KB0GLV is the local Emergency Coordinator for Cass County:

"Well I know personally, talking with my counterpart in East Grand Forks, that they have been involved in placing manpower for sand bagging and building the dikes for several weeks prior to the advent of the flood. Every piece of communications gear in that city have been affected in one way or another.

I know at this point the hams have put up a portable repeater to continue to have communications support for emergency management. They continue to work hand in hand with emergency management. They continue to man the E.O.C., even though it has been moved twice. They have been doing amateur television to provide on the scene pictures back to emergency management for them to look at different situations and be able to assess them in real time rather than going out with a video camera and bringing them back and assessing that way." KB0GLV

Carbno notes that its not just the public that's suffering because of the flood. The ham radio community has been hard hit as well:

"Remember that 50,000 people have been displaced up there. Along with those 50,000 people are those ham radio operators. Even though they are displaced, they are still on the front lines providing what communications support that they can." KB0GLV

Carbno adds that the hams will remain on the scene providing assistance until the crisis is past.

This is a continuing story. We'll have more next week.

WESTCHESTER NY AMATEURS ASSIST IN WAKE OF STORM

Bad weather in the North-East brings out a group of Westchester, New York radio amateurs. They were activated after heavy wet snow fell during the early morning hours April 1st. The late winter storm caused extensive damage to trees and power lines throughout Westchester County and the lower Hudson Valley. Highways and roads were blocked, power was knocked out for 45,000 utility customers.

Authorities predicted that restoring power could take as long as a week for some customers. According to Alan Crosswell, N2YGK, radio amateurs provided communications support to the Westchester County Office of Disaster and Emergency Services and the local American Red Cross chapter which had opened three shelters.

Amateur communicators began work around 5 PM and stayed until nearly 11:30 PM. Hams remained on standby overnight but were not needed.

Helping local disaster agencies is just part of the hams work, radio amateurs also assist the National Weather Service Skywarn operations there and they use their radios to report wrecks and other hazards, as well.

ARCTIC HAM HELP

A ham radio operator watches over the safety of a two man Arctic expedition. The British adventurers left Arctic Russia March 3rd in an unsupported attempt to walk to the North Pole and then on to the Canadian mainland.

Dr. Steve Martin and Dave Mitchell are keeping in contact by HF radio with help from Lawrence Howell, GM4DMA. Martin and Mitchell are using an ultra lightweight 30 watt transceiver with a dipole antenna. Howell's station consists of modified amateur equipment and antennas supplied by amateur radio manufacturers and retailers. The two adventurers hope to arrive at the North Pole in May and the Canadian coast around June of this year.

WORLD TELECOMMUNICATION DAY IS MAY 17

"Telecommunication In The Service Of Humanitarian Assistance." That has been chosen as the theme for the May 17th celebration of World Telecommunication Day. Amateur Radio is expected to be featured in a special telecommunications center. The event will be held in front of the International Telecommunication Union headquarters in Geneva, Switzerland.

A special event amateur radio station is also expected, using the callsign 4U1ITU. That's the callsign for the ITU Headquarters club station.

(Via GB2RS)

(*****

PARACHUTE ANTENNA

And it may be that a daredevil parachutist may have been celebrating World Telecommunications Day a little early. He was rescued after jumping off a South Carolina radio tower and getting hung up in the supporting guy wires.

It happened in the city of Lauren, home of WSSL FM and its 1200 foot tower. According to Radio World Magazine, the thrill seeker jumped off the tower from 500 feet up. Jim Graham is the station's chief engineer, he says that when he arrived on the scene, the parachutist was hanging from a guy wire about 350 feet above the ground.

Rescue workers from Lauren and Greenville counties worked five hours to remove the man. When he finally made it to ground, he was greeted with handcuffs. Police charged him with trespassing and treated him to some ground time in a local jail.

NAB AND HAM RADIO

As many as 3,000 ham radio operators from around the world were among the 100,000 attending this years National Association of Broadcasters Convention and Exposition. NAB, as its called, was held April 6th through 9th in Las Vegas.

The American Radio Rely League had a well staffed booth at NAB '97 with two current and one former Director at the helm. Attending were the Pacific Division's Brad Wyatt K6WR, the South West Division's Fried Heyn, WA6WZO along with his wife Sandi, WA6WZN.

Also there was former Dakota Division Director Howard Mark, W0OZC. They were assisted by other local League officials and hams from local radio clubs. ARRL General Counsel Chris Imlay, N3AKD also attended.

And well over 1,000 hams were on hand for the NAB Ham Radio Social Hour at the Las Vegas Hilton, that was sponsored by Richardson Electronics. In all, it was great public exposure by hams to the industry they helped to create.

RADIO SHACK TAKES HTX-204 DUAL BAND HT OFF THE MARKET

If you're one of the few people with a Radio Shack HTX-204 dualband amateur handy talkie, you just may have a collectors item. That's because after barely a month on the market, Radio Shack has pulled the popular radio off its store shelves.

In an April 17th notice to its stores, the Ft. Worth Texas based electronics chain ordered an immediate recall of unsold stocks of the radio. A source at Radio Shack's headquarters cites a "regulatory compliance issue" involving the transceiver. Radio Shack says it has no immediate plans to offer another dual-band HT.

The HTX-204 started showing up in the chain's 7000 retail stores about six weeks ago. An official at the company's headquarters tells the ARRL Letter that Radio Shack is worried about potential illegal use of the new radio but he declines to be specific. He does emphasize that the HTX-204 is perfectly legal for use on Amateur Radio frequencies. Newsline has learned that the radios can be modified, something Radio Shack never intended.

And, the radio was to have had a unique appearance as part of the agreement with the company making the radios for Radio Shack. But a dual band HT with the same appearance has turned up under another name, in apparent violation of Radio Shack's agreement.

This sudden recall hits many dealers by surprise. At the BirmingHAMFest in Alabama, a Radio Shack vendor was planning to put the radios on sale as a Hamfest special, but he received orders just 48 hours before the Hamfest started not to sell the radios. And because Radio Shack has discontinued its single band 440 MHZ handy talkie, many dealers have few, if any, UHF radios available to sell.

(Via various sources)

(*****

NEW ICOM REFLECTOR

If you are a fan of Icom amateur radio equipment, you may be interested in new ICOM Users Reflector established on the Internet. It's the work of Al Walker, K3TKJ. The reflector is described as a generic ICOM oriented Internet remailing service for those wanting to exchange information on all Icom ham radio gear.

If you want to subscribe, all you have to do is send e-mail to majordomo@qsl.net

In the body of your message type two words:

subscribe icom

You will be automatically added to the list.

ED TILTON, W1HDQ - SK

A ham radio legend is gone. VHF pioneer and former QST VHF Editor Ed Tilton, W1HDQ, died March 1st, Ed Tilton was 89.

In December 1939, Ed Tilton started the first QST column devoted to VHF. Originally called "On the Ultra Highs," it eventually became known as "The World Above 50 MHZ." Tilton edited the VHF column until he retired from the ARRL staff in 1960. During World War II, Tilton worked as a field engineer for the military on radar projects, mostly at Pearl Harbor and Guam, and became acquainted with the great technological progress the military made in the VHF-UHF spectrum. Even while occupied with his wartime duties, he still managed to file occasional columns throughout the war years.

Tilton was a life member of the ARRL. He also belonged to the QCWA and the Spring Hill Amateur Radio Club. Donations in Ed Tilton's name can be made to the:

Hospice of the Florida Suncoast
300 East Bay Drive
Largo, Florida

STS-83 REDUX - AGAIN

NASA says it will refly the STS-83 microgravity spacelab mission this summer. And there's some good news for hams, SAREX will be on board.

The second flight of STS-83 is now tentatively set for liftoff on Tuesday, July the 1st at 2:30 PM from Cape Canaveral. It will be a 15 day, 17 hour mission. During the flight, the ham astronauts on board will try to contact all 18 schools that were missed when the Columbia orbiter was forced to land early during its first STS-83 mission. That mission was cut short when a fuel cell malfunctioned.

(Via NASA)

(*****

STS-84

And the STS-84 mission will have something special. Ham astronaut Charlie Precourt, KB5YSQ, plans a special ham radio contact during the mission. Precourt plans to pay a short visit to the MIR space station. He has reportedly obtained permission to use the ham radio gear aboard MIR to make a single school contact while the two spacecraft are docked.

(Via NASA)

ATV ROCKET LAUNCHES SET

Not quite as high up is the Aerospace States Association Rockets for Schools program. The project plans to launch three rockets during May that will carry Amateur TV payloads. All launches will use 11 foot long Super-Loki sounding rocket, hose are identical to the rocket used for the successful Wisconsin Rockets for Schools program launch in May, 1996.

A Super-Loki rocket carrying an ATV payload with GPS data on the audio is scheduled to be launched May 10th. It will transmit on 439.25 MHZ. The launch takes place at Cape Henlopen State Park in Delaware.

Then on May 17th, two more Super-Loki rockets carrying ATV payloads will be launched at separate times from Sheboygan, Wisconsin, on the shore of Lake Michigan. Current plans call for the first to transmit ATV on 434.25 MHz. There will be Morse code telemetry on the audio. The second will transmit ATV on 439.25 MHZ with GPS data on the audio.

DX

In DX, word of a pirate station alert. An operator using the call OH0/OZ1WF is reported to be a phony. DX sources say that the real OZ1WF has not been active on the HF bands for years. He recently received a lot of direct QSLs for this operation and he will be sending the cards back. The pirate often operates on 80 and 160 meters.

And the new U.K. 73 KHz band, that's Kilohertz DX record has been broken as soon as it was set. We recently reported that G0AKN and G3HMO had set a new 73 KHz one way distance record of eight kilometers. Now comes news that on March 30th, G0IAY Portable near Petersfield, England received CW signals from G4JNT near Southampton. That's a distance of 22 kilometers.

The first cross-band home station to home station contact has been made on 73 KHz. On April 5th, G4JNT contacted G3YGF near Salisbury, England.

Talk-back was on 2 meter sideband. The 73 kHz one way distance record was
also extended to 26 kilometers by this contact.

Finally, FG3RFX, will be active from Gibraltar until May 6th. His
operation includes 160 meters and the RS-12 satellite. QSL as directed.

(Via various DX sources)

(*****

APRIL FOOLS BACKFIRE

Finally, the story of an offer that sounded just too good to be true. A
Birmingham, Alabama radio station tells listeners that a helicopter will
fly over a field near a shopping mall and shower hundred dollar bills on
anyone who shows up. And show up they do, in the thousands.

A nearby interstate highway is turned into a parking lot at midday.
Police have to be called for crowd and traffic control. Sure enough, at
the appointed time and place, a helicopter appears. But no money ever drops
from above. And then listeners realize the date, April first, and they
know they have been had.

Being the target of this April fool's joke didn't go over well with
everyone. Some listeners damaged the radio station's van.

The police aren't laughing, either. Although the station's general
manager apologized the following day, Homewood police chief Charles Trucks
says he'll contact the FCC because of what the station did and the problems
it caused.

I have two things that I am looking for:

1. min 2.5W output 2M/70cm dual band hand held (under $250. newer is
better. must be functioning properly.) the information for 70cm
only hand held is also welcome.

2. Packet Terminal Controller (for Pentium IBM Compatible PC. 1200bps
minimum; perferbly 2400bps or more. under $100)

Also I would like to know a good store for hand helds or packet
terminals.

I believe that GMRS licenses are only currently issued to individuals -
but multiple individuals at a business may be licensed... have a look
at Part 95 for details.

Tim..
I started buying up Drake gear about 4 years ago and except for a IC-706 for mobile/portable use thats all I use. I also started buying up all the tubes I could. I have enough to last a good while. The 6JB6's are the only ones that are pricey. You probably would'nt have to worry about the others so much. Every piece I had bought was clean and had good tubes. The most I paid for 6JB6's was $30 for a pair at Dayton a few years back. Some are as high as $60 a pair.
I enjoy the old Drakes and really dont have any desire to own anything else. I prefer to work on my own stuff and that is part of the enjoyment I get from the hobby!

1873. Hotel pay-tv, how does signalling work

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-28 00:00:00 UTC
From: "Frank W. van Wensveen" <fvwensve@hvsag01.nl.lucent.com>
Message-ID: <33648F80.507F@hvsag01.nl.lucent.com>
Source record: 199445

** Please reply via direct Email - thanks! **

I can't help but wondering about hotel pay-TV systems. I've seen several varieties. One was very simple, consisting of a sharp notch filter (blocking the pay channels) that was shorted out after inserting a chipcard. The chipcard was read for billing when checking out. Nothing mysterious there. :-)

The other variety was more interesting. A unit inside the TV (yes, I did have a screwdriver with me) was connected to the band selection lines of the tuner. As soon as the upper UHF band was selected and the tuning voltage exceeded a certain treshold level, billing would start. (The pay channels were all located in the 'high' parts of the UHF band.)

So far so good. But *how* does the TV signal to the central accounting system that the pay channels are selected? I could measure no DC voltage on the hotels central antenna outlet, so that's not how it's done. I can think of only two alternatives; one is a signal modulated on a carrier that is sent back to the central computer, and the other is a notch filter that is connected to the antenna input in the TV so that the input impedance drops for that frequency, which could be measured (with a griddipper-like circuit).

Could anyone tell me how these signalling systems really work? How does a hotel TV signal the central accounting system that pay channels are activated??

** Please reply via direct Email - thanks! **

I currently own an Icom IC-2350H, and have it mounted in my Blazer. I run cross-band through it during the day and the evening. I'm looking to broaden the capability of my cross-band setup by installing the UT-101 DTMF decode module into the 2350H.

I know this will allow remote control of the 2350H from my HT (an Icom IC-Z1A), however, I don't know to what degree I'll be able to control the 2350. If anyone currently uses a setup like this with the 2350, I'd appreciate knowing what you're actually able to do once the UT-101 is installed.

Can I, for instance:

1. Enable and disable cross-band repeat remotely from my handheld?
2. Change both the VHF and UHF via the HT?
3. Change output power settings for the VHF and UHF bands?

Right now, I currently have the 2350 set to cross-band between a simplex UHF frequency and the local repeater's input frequency. This minimizes the TX time of my mobile ('cause I don't have the $88 UT-89 decode module installed in the mobile). I would, however, like to leave the mobile ON, but NOT in cross-band repeat mode, and only enable it when I need to use it (see #1 above). Also, I'd like to be able to choose WHICH local repeater I'm cross-banding with so that I could change that from a remote location, rather than running down to my Blazer to fiddle with the mobile (see #2 above).

Enough babbling. I think everyone gets the drift...

Please email me with any responses, in addition to any posts made here on the newsgroups! Thanks, in advance, for any insight you may be able to lend!

Does anyone out there know who makes software for use with the Kenwood TS-850? Also, if you are currently using any software for this rig what brand
are you using and what do you like/dislike about it? Any info will be greatly
appreciated.

The FCC will no longer issue a license for business use in the GMRS
service.

You should be able to obtain a license in the Business Radio Service.
This will

require frequency coordination with NABER.

I am well aware of the GMRS rules. And I chair a 300+-member GMRS operators' group. Licensing the individuals in his small business and getting them on their own tone would be an ideal use of the GMRS for my organization.

As a law enforcement agent, you should be especially sensitive to the fact
that using the FT-10R on public safety frequencies is illegal. Yaesu makes
the Vertex line which *is* Type Accepted for that usage.

Oh god,
I never thought that my original posting would start you guy's off, I'm

used to all this and have a good laugh on the cb ng.
I must admit that I would not of thought that anything 2m would have the necessary 5nf or 10nf trimmers inside so did'nt bother looking.
I do like the sense of humour in teaching the population of this ng the difference between nf & pf!
Seems anyway that I'm going to have to pad out the largest trimmer that I've found (3500pf), with some fixed caps.
I must look into this ng more often, I enjoy this kind of humour,

The new radios do have many useful features than your old Drake,
and certainly hear a bit better, but the Drake line still sees a LOT of
everyday usage.

Keep your eye out at Dayton for any which have the "Sherwood"
modifications. These are exceptionally good units (assuming they
are in working order) but may be a bit spendier than average,
because they are in heavy demand by HF contest operators.

> a longlonglong time before code is done away with...

I am puzzled as to why you feel that there is "chaos taking place." It seems to me that people are simply voicing their opinions on a matter of great import to the future of amateur radio. Sure, there are some who get overly emotional, etc., in support of their position, but then again this is typical of any spirited debate that is of any importance.

Personally, I find the arguments used to support retaining Morse Code testing to be flimsy and insubstantial. Pretty much no one uses Morse any more except amateurs. And amateurs use it strictly for recreation: Morse is NEVER used in emergency communications, and has even been banned from use by services such as MARS. Too inefficient and dated.

With Morse deterring many quality people from entering our hobby, and with our hobby rapidly greying into irrelevance, I would say that there is compelling reason to dispense with Morse testing without further delay. Until the international treaty can be modified, maybe a 1 wpm test in true-false format would be appropriate.

I have heard this type of signal frequently used as a jamming technique to interfere with some of the more "colorful" transmissions in the 40 and 80 meter ham bands. Presumably some induhviduals have their hands on this equipment and are using it to make life on 80 and 40 so much more wonderful for the rest of us?

Gary

I have to agree, I had both the B and C line and the R4C receiver was and still is the best I ever used and this includes more "modern" rigs such as the 757 yaesu, the Icom 725, the Icom 725, and the Kenwood 440. It seemed almost impervious to overload problems even with the 4NB turned on and the passband tuning is the equal of any IF shift I have found on the new rigs. With an outboard DSP filter I imagine it would perform about as well under normal band conditions as anything out there today. With the right crystal, you can receive or transmit on band not included with the original set. Unfortunately I sold my C Line a few years ago but will be looking for another during the hamfest season this summer.

Can't help with freq's, but you might consider
going north via Highway 97. This is a primary
road, and will cut *hours* off your trip.

Unless you are planning on some activity in Portland,
the best bet is to avoid it (trust me, I was born
and raised there, and never miss it). I drove this
route at least 20 times and only had to put chains
on once, and that was the dead of winter and a
roadblock was set up to force you to do that :-)

Highway 97 starts off of I-5 just south of the Oregon
border, and puts you well east of Portland at the top.
About the only bad thing is the people who get killed
just north of Klamath Falls. There is no waterfall
in Klamath Falls, it's called that because of the rock
falls. These almost always occur whenever a large
motor-home passes through, and of course crushes
the poor souls.

I figure you're aware of the GMRS rules, and I'm just delighted to
hear you're a chair for a 300+ member group. However, you didn't
point out the (important) detail on how a business needs to
license individuals, which could lead to confusion. Perhaps
you'll be so kind as to mention the Personal Radio Steering Group
(or whatever they're called) and how to contact them for more
information?

;-)

The ruggedized version is the 6146W. This tube is still available
especially if you have access to a military/surplus source.

1901. CT QSO Party This Weekend - Work W1AW !

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-28 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <3365272C.63AF@ix.netcom.com>
Source record: 199473
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc

1997 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 3
until 2000Z May 4, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county
lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single
Multi-multi
classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for
QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange
report
and state/province/DXCC country. Non CT stations work CT stations only.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low
end;
Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150,
144.200,
146.580. RTTY - Normal RTTY Bands . All bands (HF,VHF, UHF) except
WARC bands count.

Score one point per phone or RTTY QSO and two points per CW QSO.
QSOs
with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/
provinces/Connecticut
counties worked (DX only one multiplier); others multiply by Connecticut
counties worked (work CT stations only).

Plaques and certificates (100 point minimum). Special certificate
for
working all 8 Connecticut counties.

Send entry and SASE for results by June 3 to CARA, P.O. Box 3441,
Danbury CT 06813-3441

CARA - http://www.danbury.org/org/cara/

GMRS is fine for the family business. Once you employ others outside
of family members and permit them to use your radios you are operating
illegally.

Is your coverage requirement for mobile radio only? If so a moderate
tower and base station will get you 10 miles. Do you need portable
coverage? Then you need a repeater on a tall tower. Of course local
terrain figures into all of this as well.

1908. Re: Crystal Radio (physics)

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-28 00:00:00 UTC
From: jackw2ba@aol.com
Message-ID: <19970428030100.XAA03495@ladder01.news.aol.com>
Source record: 199581

crystal radios can only detect amplitude modulated signals
When this type of signal is picked up and coupled to the crystal detecton,
the sidebands , which contain the audio, are rectified. If the signal is
strong enough, the audio result of the rectification can be heard using
headfones. It's a fun thing to do.

There will be a proliferation of very low power signals in very tight
beams. They will presumeably be quite frequency stable (the key to high
data rates) making them easy to filter out. Have you ever noticed the
high power 10GHz microwave links the telecoms have used for years?
In city hams may face a greater challenge but these problems should be
solvable if we don't run off all the technical people in this hobby.
I don't think it is nearly the problem that we were presented in
Central America with the confiscation of the entire UHF spectrum You
can't adapt to new challenges when you have no access at all.

Nice threat Burt. If anyone else finds Burt's threats and general
behavior offensive just forward the offening post to the provider it
originated from. It is unlikely Burt will ever stop but perhaps he can
be made uncomfortable. Burt's response to this post and Todd's should
be an indicator of just how worried he is about this. I expect from
this offensive he is down to his last provider.

> > 6-meter SSB rig? How about its Rx and Tx performance? Stability?

My first time on the MFJ-9406 was during a band opening and I worked
stations about 1000 miles out with its 10 watts PEP USB and a half-wave
dipole!

I'm quite happy with it. During a band opening I stack-up with the big
boys even though I'm technically QRP!

I am looking for an inexpensive 6 Meter transmitter (or transceiver).
It does not have to be high power - only need about 1 watt (voice, not CW)
I already have a 6 Meter receiver.
I don't want to spend more than $150.
Please email me directly if you know where I should look for one.

Thanks,
John N7MTB

Absolutely.

A co-worker of mine recently had a neighbor put up a CB antenna. He
immediately began receiving interference on his DSS. Luckily, this
co-worker works for a TV station and rather than raising a ruckus with
his neighbor or calling the sheriff, he called our engineering
department. I learned today that one Radio Shack snap-on toroid on
the DSS feedline totally eliminated the interference.

Just one excellent example of cooperative effort solving a severe EMI
problem without screaming & gnashing of teeth..

Dear Burt Fisher,

Please forward the following to all those fat people on
ASD and the many radio amateurs

Hello,

I am so excited I just had to tell you about something
that is changing my life.

Recently I tried something called Pyruvate.

This revolutionary new product burns fat and increases
lean muscle mass with an improvement in overall endurance.

I've tried just about everything on the market for weight loss
and nothing worked like this.

For more information Please E-mail me.

1928. UK court ruling touches on RFI shielding

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-29 00:00:00 UTC
From: kjh6@psu.edu.DIE.SPAM.DIE
Message-ID: <5k4oif$s4m@r02n01.cac.psu.edu>
Source record: 199393

In todays's RISKS digest, number 19.11 (Dated 28 Apr 97), there is a note about a couple in Britain who sued the maker of their automatic bed (folds, tilt, vibrate, etc) because the thing was activating at random times throughout the day and night. The best guess was that it was suffering from RFI, but it apparently was not fully investigated. In ruling for the plaintiff, the following point was made by the judge:

(quoted block copied from RISKS digest)

>* Judge explicitly stated that in his opinion, makers of complex electronic
>equipment should ensure that it is properly shielded against RFI: "If one is
>going to market expensive beds, one should take into account the possibility
>of interference and guard against it. It is not as if their home was full
>of gadgets like the den of James Bond or Goldfinger. It is just an ordinary
>house."

Thought this would be of interest given the recent discussion on the pathetic RFI resistance of modern consumer electronic gear.

The RISKS digest is gatewayed to the USENET newsgroup "comp.risks" for those who wish to read the entire digest.

Cross-posted to: rec.radio.swap,chi.wanted,misc.forsale.non-computer,rec.radio.amateur.misc

I have an Alinco DX-70T and EDX-2 that I would like to trade in
against a dual or tri-band FM rig. It is in excellent shape, and I have
all the manuals and original boxes as well.

I'd be interested in either of the following:
Kenwood TM742 w/ 10M or 6M module installed
Kenwood TM942 w/ 10M or 6M module
-or-
something comparable

I'm basically looking for a neat 3-band FM setup (too bad they don't make
a 10M/6M/440 rig, as that would be my first preference). I already have
a TM241, so 2M isn't necessary.

I'll also sell the Alinco gear outright; $700 OBO, + shipping

Please drop me a note if interested.

1939. Radio Operator sues over tower

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-29 00:00:00 UTC
From: adell@mailhost2.planet.net
Message-ID: <MPG.dd022409440f29898985c@news.planet.net>
Source record: 199404
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Article originally appearing in the April 29, 1997 NJ Star Ledger
written by Brian T. Murray
Star Ledger Satff writer

A Mount Olive, NJ ham radio operator sued yesterday, charging that the township is giving him unfair static over hi attempts to nearly double the height of an 85 foot transmission tower in his backyard.

Robert Elms and his wife, Barbara, charged in a Superior Court action filed in Morristown, NJ that the zoning board was being unreasonable March 10, when it rejected his application to erect a taller tower on his property.

With an expanded cement base, the total height of the structure would be 169 feet.

His lawsuit also contends that the local zoning official unfairly has been pressuring the township to review whether Elms needed official permission to replace the existing 85 foot tower when it collapsed two years ago.

Elms contends he has had a tower for ham radio purposes since 1970 and that it constitutes what is known as a "nonconforming use" because it predates municipal zoning regulations.

He also contends the township required only that he obtain a building permit when he raised the height of his tower from the original 70 feet to 85 feet in 1985.

But when the ham radio operator sought approvals to raise his tower to 170 feet two years ago, he was told he would be in violation of local land use laws. His home is in a residential area.

His problems began to mount in 1995 when his 85 foot tower collapsed - possibly due to sabotage, according to Elms, who contends he discovered two bolts missing.

He simply erected a new one in 1996 at the same height, but was confronted by the local zoning officer who insisted he needed township approval even to replace the old tower.

The zoning board did not address the replacement issue, but when Elms made a request last year to raise the height of the tower to 160 feet - the board ruled against it last month.

The ruling was partly based on esthetic reasons, noting that Elm lives in a residential area.

Who wants a 169 ft tower in their neighborhood!
Who's being unreasonable.

We have a church up in Edmond Oklahoma that wants
to build a 200 ft cross. The city said no. The church
then got new council members elected, and will
probably get the vote they want.

Problem is, the tobbacco and strip bars will want to have
200 ft billboards as well.

If you don't want 169 ft towers all over your
neighborhood, best to nip this in the bud at the
get-go.

It's guys like this that make it so damn hard for many others
to get a tower of any height. I think Mr. Elms has a misdirected
sense of what's reasonable and who may be the unreasonable
party. I'm sure there is a lot more to the story on Mr. Elms side,
but 169' in a residential neighborhood just ain't reasonable no
matter what the story may be. Unfortunately, the court is likely
to feel this way too.

Feel free to contact whomever you like. My postings are on topic,
within the domain of the newsgroup they are posted to, and contain
nothing related to my employer. You on the other hand SPAM newsgroups
on a regular basis with complete and utter garbage with the sole
purpose of trying to get attention. You also appear to have been
moved from one internet provider to another, and now make rather
empty threats. Am I supposed to be impressed that you figured out
how to use a call sign server and switchboard? I'm waiting for the
"I'm gonna punch your lights out" threat as it would be in character
with your previous posts. Is the Internet your new outlet after you
got ignored on the air? Just as the FCC monitors the airways,
fortunately most Internet providers have appropriate use clauses,
and your postings probably violate them.

73,
Todd

Hello Everyone,

I have for sale an Icom T7-A dualband handheld. It is five months old and is excelent condition. Comes with 3 watt battery, duck, charger, manual, and box. This unit will RX: 50-199, 300-399, 400-599, 600-999 mhz. (Cell phone blocked though) :(Also, the TX has been expanded. I will also throw in the softcase. ($30 value)

This is a good radio, but I am selling it because I want a dualbander w/ 2 vfo's. You can be the new owner for $300 + shipping from Montana.

Thanks,
Adam / kc7ljq@hotmail.com

If I were actually threatened I would have not responded at all
to his threat. I would have been very quiet and hoped he did nothing.
My response was designed to get him to act (so therefore I could act and
teach these people that like to make threats a lesson).

I have not lost a provider.

False. Do I say 59 QSL via buro? That is garbage.

You also appear to have been
> moved from one internet provider to another, and now make rather
> empty threats.

I move from provider to provider, why do you say that?

I'm waiting for the
> "I'm gonna punch your lights out" threat as it would be in character
> with your previous posts.

Why would I do that? You did not hit me. YOU THREATENED to contact
my provider, I respons where it will hurt you in a similar way.

>Is the Internet your new outlet after you> got ignored on the air? >Just as the FCC
monitors the airways, fortunately most Internet providers have appropriate use clauses,>
and your postings probably violate them.

Ignored on the air? No one has the guts here to meet me on the air.
My postings violate nothing that you suggest.

I find people threatening to censor others they politically disagree
with pathetic.

If you don't agree with Burt's views of amateur radio, add him to your
kill file. There is nothing "offensive" about his behavior, unless you
happen to disagree with him.

Whether or not I agree with Burt is irrelevant. My disagreement with his
opinions is not justification for censorship, which is exactly what you
and Todd propose.

> him. Stop trying to decide for the rest of us what we choose to read.

I have a clue for you Glen, usenet and the Internet work because people adhere to certain conventions. With 100's of megabytes of news being generated every day, some order is necessary to make it something other than so much noise. I generally ignore Burt's trolls for a rise out of someone, but his last post is essentially commercial advertisement for something completely unrelated to any of the newsgroups to which he posted it. In case you hadn't noticed, more and more newsgroups are becoming nothing more than SPAM free-for-alls. If you'd like to see the amateur newsgroups fall into that category, support completely off topic, unrelated, commercial posts to a newsgroup. If you think this is censorship, try standing on your soapbox at a theater some time and try to out shout the show. I believe you'll be kindly shown to the door without one complaint of censorship by anyone.

Another clue is that many of the more popular newsreaders including the one I use (unfortunately) don't have killfiles. And Net-Nazis? Whew, there's a good one.

Todd

rec.radio.amateur.misc

April 30, 1997

Now the KB8UYZ Weather Page is updated several times throughout the day, giving you an accurate forecast for the Lansing area all day long. The site now has links to great national and international sites, such as CNN Interactive's weather page, The Weather Underground, the Air Weather Service, and much more! You can get your current weather information, no matter where you are!

There are also links available for the current national or regional satellite and radar maps, so You can see what the weather is like in your area. You can access the National Oceanic and Atmospheric Administration (NOAA) and the National Weather Service (NWS) right from the KB8UYZ Weather Page!

Tell others of this site, as it is a site that anyone can use and enjoy. We would love to hear your input on the page, so please email us back!

Thanks,
Dan Hicks, Jr.

Indeed, however, crystal detectors can also demodulate FM, if tuned to
one side of the carrier. The reason being that the response slopes
off to either side of maximum sensitivity, and then this makes the detected
output proportional to frequency. Of course, there aren't any FM
transmissions on AM medium and long wave bands where crystal radios
are usually built, you have to make one to resonate at 100MHz in Band 2
and couple in a nice strong signal. Results although not hi-fi quality
should be intelligible. You can also demonstrate this with a
dip oscillator coupled to a loop connected across an FM antenna
down-lead.

Direct from the Sony WEB page:

ICF-SW55
MSRP$ 449.95

AM (LW, MW, SW)/FM stereo reception

Precise manual/scan tuning

Electronic rotary dial for manual tuning

125 station memory presets programmable by station name

Universal time coordinator (UTC) with world time scale

PLL quartz frequency synthesis tuning

10-key Direct Access tuning

Factory-programmed country and frequency presets

Built-in clock with alarm, sleep function and timer stand-by

Backlit LCD readout with contrast adjustment

Tape record-out jack

I bought this a couple of years ago and have used it about 10 hours total.
Just never got the hang of DXing.

It comes with the ac power supply, soft case and deluxe hard case, Sony ear
phones, and the long wire antenna coupler.

I have misplaced the compact long wire antenna that came with it. The internal
antenna works great or you can hook up your own long wire antenna with the
adapter that's included.

Yours for $225.00 plus shipping costs.

Email your offers to: greeby@onramp.net

I have Netscape 3.0, and a local ISP.

When I type in a certain URL on the internet, http://www.faa.gov/,
it seems to connect o.k. and I get the message at the bottom of the
screen saying "Transferring data from www.faa.gov", but nothing else
ever happens; i.e., I never get the web-page, no matter how long I wait.

I've talked to my ISP people and they say I have a good connection
as far as they're concerned, and they don't know why the web-site won't
come up.

I would appreciate any help.

George, n9ejs@mcs.net

The "gurgling water" sound is two-way frequency-hopping comms.

Chirpsounders don't actually chirp, they sort of "braaaaaap!"...and
you can hear them walk up the bands every 15 minutes.

It seems to me that the proliferation of de-featured newsreaders provided
by the Web browsers is at least partly responsible for these kind of problems.

I have heard that Netscape will be providing some sort of kill file ability
with the next release. I'd also like to see some other features restored
such as:

access to the 'followup' line in the header. If you edit the followup line
you can insure that any response to your response will be sent to some limbo
newsgroup such as alt.flame.

access to the 'distribution' line in the header. The Web browsers default to
'world' distribution resulting in many inappropriate posting distributions.
I see a lot of 'for sale' postings from someone over a thousand miles from me
who is requesting local pickup only. I'm probably not interesting in a swap
meet in Virginia either.

I suggest that if you are really interested in fixing these problems you
should contact your newsreader software provider, possibly:

http://www.netscape.com/misc/feedback.html

and ask them to help you enjoy USENET more by providing kill file ability
for specific authors as well as subject lines.

battery pack, lighted LED, mobile mag mount ant, manuals, and
digital display. Excellent condition, $300.

Realistic DX-380 Portable Communications Receiver.
150 kHz-30 MHz AM and 88-108 MHz FM. Digital display.
Has local/dx and narrow/wide AM reception switches.
Stereo/mono FM switch. Also, hi/low tone and fast/slow
tune switches. AM external antenna, dc power, and headphone
jacks. Tunes by direct entry, up/down button, or rotary dial.
Original box and manual, like new, works great. $100

I will pay shipping via UPS ground.

There has been some updates provided by Bill K2UNK. Robert Elms is not
an amateur (I too could not find him in any database). It seems that Mr.
Elms' tower is utilized by both amateur and commercial interests.

I have notified the reporter that wrote the story as well.

More to follow as it happens

> Nothing personal Steve, 73 Jeff KS4KO

Nothing personal taken Jeff. I just passed along a newspaper article I
read and thought you be of interest.

Jeff:

Just for your info. I just received my license and passed to Tech Plus two weeks ago.... I used Code Quick and was very hapy with it ! I will be upgrading to General this summer (I hope) and continue to review the tapes and use their "steppers". While some of the material seems "over simplified".... DO IT ! It really worked for me. I've been told that once you pass your exam at 5 to 7 wpm the best thing to boost your speed further (not to mention your interest) is to get on the air and use it ! Thats what I plan to do ! If I can be of any help to you just drop me an email !

Source record: 199295

I have the following station for sale:

Kenwood TS 440S/AT (built in tuner)
Kenwood PS 430 (power supply)
Kenwood SP 430 (speaker)
Kenwood MC 60 (microphone)
Kenwood PC-1A (phone patch)

The Kenwood 440S/AT has the YK-88-CN CW filter installed.

The station also include the IC-10 Interface

I have all the original operators manual, service manual, and the
computer interface documentation. Would like to selling locally
or to someone who will see the setup in person. Nice station.
It has the MARS/CAP modification. All the above for only $1,300
pick-up and will ship for $1,350

Also have the Kenwood TS-520 SE for sale with original
box, manuals for only $350.

Body handling: Inline uuencoded payload not displayed: Kenwood TM-V7AE Modifications !!!.txt

Hi,

The Kenwood TM-V7A/E is the new version of the TM-732A/E. It's a FM-dual bander for both 2m and 70cm with 50W on 2 and 35W on 70cm. The transceiver has an alfanumeric display with 180 memories, graphical band scan function, 9600 baud packet input (allowing to run packet on one band and simultaenous QSO on another band) and all the other features you can find on a normal transceiver. In one word, I haven't seen a comparable rig so far.

In the few weeks I now own one, I think it is a great rig with a lot of features. The only minor issues that I heard of are:
- there's no subband mute. This would be handfull when listening to two bands, the second band would mute while receiving input on the primary. For me personal, I can live with it since listening to two QSO is confusing anyway and the bandscan is a lot nicer to monitor for any activity.
- the 1750Hz contains a strange noise. This is a problem that I found out myself and of which I believe it's a child-problem (so they have it all). The problem causes a failure to open a repater (in Belgium 1750Hz is used to activate them) by the 1750Hz is some special cases. (90% does work fine).

About the mods, a file is attached with all the info I have.

>but 169' in a residential neighborhood just ain't reasonable no
>matter what the story may be. Unfortunately, the court is likely
>to feel this way too.

FYI, Mr. Elms is not a ham. I have been to several of the township
meetings on this situation and it has several twists and turns that
makes it significantly different than a straightforward (if there
is ever anything straightforward about tower cases) amateur
tower. Yes, there is an amateur packet repeater plus a recenlty
added 10m beacon, but most of the antennae are commerciail
(pagers, cellular,etc.)

One of the other issues besides height is the presence of
commercial antennas added over time to the original tower.
One of the counter arguments is that while the town sez no
commercial allowed because it is a residential zone, the town
on its own leases space on town water towers in residential
areas to various telecommunications providers. That's the
do as I say, not as I do way of government.

Additionally, the town just approved a 200' strictly commercial tower
next to an existing home. The area is now zoned commercial,
but that doesn't change the fact that a residential property still
exists immediately next to this proposed 200' tower. The 200'
structure will be on a one acre lot. Mr. Elms lot is several acres.

Cheers,
Bill K2UNK

>see these systems deployed rapidly as soon as 1998 to provide non-commercial
>and commercial services on these frequencies.
I haven't read that R&O yet but I did read the December one which originally allowed a maximum of 4 Watts ERP on the 5.8 GHz U-NII band, with unlimited *receiver* antenna gain and 1 Watt maximum transmitter power. It sounds as if they just decided that the asymmetry wasn't worth the bother, so you can use one highly-directional antenna for both transmitter and receiver. Makes sense to me.

In typical U-NII service, there will be cellular-style base stations with directional antennas pointing at them. Spectral density is VERY limited: The 1W TPO is actually 50 mW/MHz, so if you're not at least 20 MHz wide, you have to derate power. This tends to reduce interference potential dramatically, especially compared with ham-style narrowband emission.

The U-NII band is one of the best things the FCC has done in years, a real gift to the public, finally a chance to do *something* without being beholden to the "Bell" interests. The h-r-online article is so utterly parochial that it seems like a discussion of World War II that begins with the headline "Church artifacts burned in fire". By opening this band up with VERY loose rules, save for power density, the FCC finally allows the public to have useful access to valuable spectrum! We who have been hams are the most likely ones to know how to use this, but it's certainly not in the antiquarian manner to which the A.R.S. has become accustomed.

Please Todd seriously, is not Burt's threat even more of an attempt to censor Todd. Give that a bit of thought. I would like to see a similar response from you when Larry Roll tells Len to leave the news groups because he is not a ham. I do not remember such a posting but will be happy to be corrected.

OTOH should all the folks who have had a belly full of Burt or who he has slured because of their ethnic group be silenced from protesting this activity to protect Burt's "free speach". Sounds pretty Liberal comming from someone with your sig line.

I can't speak for Todd but my real problem is the propagation of meadow muffins like that SAREX crap he posted. Some people actually believed it. Burt regularly slanders all hams and you cannot slander people with impunity, unless you are a Supermarket Tabloid.

Take the code debate out of the equation and consider my points on their own merits.

recently licenced to three Canada wide
: companies..Cellularvision, Regionalvision, and Maxlink (Digitalvision).
: The network is a cellular point to point system operating in the 28 Ghz
: range and is designed to provide bi-directional telecom, cable tv,
: videoconferencing, and internet/data services to homes and businesses.
: Each of the three companies in Canada has a licence for a 500Mhz band. As
: of today, two test "cell" sites are operating in the Metro Toronto area.
: The system is based on the NY City "Cellularvision" technology, which has
: been in use in NYC for a few years now to deliver wireless cable tv
: (MMDS) service. This does not, in any way, affect the ham bands.

: John Mckay
: VE3OBP

Shameless crossposters! Spam, Spam, Spam.

Not many hams are keying up on the 28 GHz band anyway. It hasn't been
that long ago when the FCC didn't even claim sovereignty over the freqs
above 20 or so GHz. Only since satellites went up has this mm wave stuff
gotten popular.

Maybe we need a subspace channel, like on StarTrek.

Maybe someone will come up with a cheap way to modulate a high power IR
source, like a hot filament. Then we can all listen to the street signs
as we go down the street.

<><><><><><><><><><><><><><><><><><><><><><><><><><><><>
I'm using LogWindows with a KIY interface cable for rig control. I've
only had it about a month but I like it very well. One reason I
abandoned my old logging software is that LogWindows can do a log
search with multiple filters. With over 20,000 QSOs in the log,
that's important. For instance, I can search for all contacts with
Wyoming on RTTY on 40 meters between 1/15/95 and 3/22/96 if I want to.
It has a great "look and feel" as well.

Also, it has the ability to interface with vhf packet, but I haven't
used it because I have a separate computer for that.

The KIY interface was announced in a recent QST and is about half the
price of the Kenwood interface, plus it can be set with dip switches
to do ICOM, Ten-Tec and Yaesu if you ever change rigs.

The gurgling, AKA 'babbling brook' that is about 20kHz wide is/was a US Army managed HF anti-jam project to provide an interim, tactical-level of ECCM protection via the modification of some existing HF radios (hence the relatively narrow SS bandwidth). It is pretty much been phased out for more modern (broader bandwidth/faster hop set) HF ECCM gear that has inherent low probability of detection/interception features & is in use by many DOD agencies on certain nets.

The 'gurgling' or 'babbling brook' stuff sounds nothing like BR Comm Chirpsounders! I doubt that anyone out there deliberately jamming moronic hams is using Chripsounders or the Improved HF Radio sets -- it is either a legit Chirpsounder or HFAJ/IHFR transmission causing co-channel interference, or a jammer using a waveform that sounds similar to the sound of a Chirpsounder or IHFR (& again, there's a big difference between the sounds, etc. of the two!).

Incidentally, yes, the Chipsounder schedules are published in a NATO publication, which last I saw was For Official Use Only. It lists the sweep start times of each site, the site location, antenna type, power output, and contact info.

Head to the Armed Forces Communications Electronics Association Expo in Washington DC coming up soon & play with their software on display. Last time I did, I got into some classified schedules & location info that those morons had failed to remove from the system they brought in

to run the simulation on!

The so called commercial was a joke as I used it. I am sure the
advertizer would not like the way I used it. I have no interest in
promoting their product.
It was a joke but to you, you do not laugh. You do some assine thing
like say "HI HI" when you think something is funny. Being fat is totally
related to hams, look at them at a flea market.

> Another clue is that many of the more popular newsreaders including the

If you wish to do something about this, don't wait for the
understaffed FCC, whose power was so well suppressed,

BTW, by ARRL, who opposed them for years, as I remember
some of the stuff I used to read in QST. It's one reason I did
not stay in the ARRL.

If yo want to do something call your US district attorner or whatever,

and learn what to do to prepare a complaint, and go to the library
and get hep on what is evidence, and record on your own RCX
all the filth he puts out that you can get, and gather evidence
THAT WILL STAND UP IN COURT about who it is.

Field strength readings, and people willing to testify they recognize
his voice will help.

If you tape any statements that amount to a clear threat against life
and/or property, so much the better. Take it all to the US Attorney's

office and file a complaint against the person, which, I am told, will
be served by a Deputy US Marshall. Remember those people who
had tanks and armored cars surrounding a militant mouth house?

They are not likely to be scared off by the threats.

Then, of course, you have to prove your assertions are true.

Good lucjk.

Since the time I have worked at ARRL HQ (about 11 or 12 years now --
they fly by so fast), ARRL has consistently tried to get the FCC to
do more enforcement of FCC regulations. I just don't understand where
this one came from.

Source record: 199368

April 30, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

2015. HELP TNC>RADIO&TPK

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-30 00:00:00 UTC
From: Robin@teleplex.net
Message-ID: <33695b1f.8136030@news.teleplex.net>
Source record: 199370

Need some help:

I have a Kenwood TM-733 Dual Band Radio with the 1200 through 9600 TNC Port. I purchased the special TNC Cable that did not come with proper wiring information. I am trying to wire up to a KPC-9612 Plus TNC.

I have the system working with a cable to the speaker jack and the rest wired to the TNC jack on the front of the radio. This works to a point. The audio from the radio on the TNC jack is not squelched and as such the TNC will not work when this connection is made.

In using the system on TPK - the TNC comes set to NEWUSER MODE. There is no reference to NEWUSE mode in the 9612 manual but there is a supplement for the KPC-3 that states to reset the TNC to HOST or Terminal Mode. HOW?

The TNC will do a connect this way

EXAMPLE:

c al7oo
KD4SMM>AL7OO/1:
c al7oo

and hang.

With others TNC the second and third line do not appear. I cant figure out why or how to stop it.

Any suggestions?

Thanks in advance

Robin Michael

Steve I think you'd better look at the avaiable databases, there is
no Robert Elms listed as a amatuer radio operator, nor could
I beleive any amatuer would be as foolish to erect this tower
in a residental area unless he owned a hell of a lot of realestate!
Nothing personal Steve, 73 Jeff KS4KO

Don't know about the IC-730, but there's a load of mods and other
neat stuff at ftp://oak.oakland.edu/pub/hamradio if I spelled
it right.

2019. West Coast Tracking help wanted

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-30 00:00:00 UTC
From: John Mullan <jmullan@sr.hp.com>
Message-ID: <33676F94.1CE7@sr.hp.com>
Source record: 199374

The Bird Rescue Center in Santa Rosa, CA has nursed a Peregrine Falcon back to health and is due to release the bird today. They have attached a low power transmitter to the falcon and are requesting the help of the amateur radio community in tracking the bird for the next few days. The transmitter is sending a pulse at 165.958 MHz at about 1.5 pulses per second. The signal is AM, but can be heard at 165.96 MHz on an FM receiver. The signal can be heard over a distance of 5 to 7 miles while the bird is in flight. Release is tentatively scheduled for between 2:00 and 3:00 PM PDT today (April 30). It is believed that the bird will be headed toward the Aleutian Islands which is its normal habitat this time of year. If you are able to hear the transmitter on the falcon, please send a note with the time and date and your location to kv6a@cds1.net or jmullan@sr.hp.com

Thanks and 73

One thing i noticed is that despite being characterized as a residential neighborhood, Elms' place was said to be on several acres. How much land is necessary to support the use of how tall a tower. If you have a postage stamp size lot vs 5 acres does that make a difference? 6 acres?

That may be so, but here in the UK some of our water companies
detect leaks by attaching a microphone to an underground
water pipe, with a pole going up above ground, which has
a VHF or UHF low power FM (in the low power band allocated for
the purpose) transmitter. Two or more of these can then be
received and the sound correlated to give a relative distance
fix to the leak, then the position of the leak can be located
a lot better than by using hit and miss digging. So, in this
case, there would be actual gurgling or hissing water sounds
being transmitted (though not in an amateur band) for
possibly hours at a time.

>Subject: Best Software For Kenwood Ts-850?
>
>I would like opinions on what is the best software to control the
Kenwood
>TS-850.

I don't have an answer to the software question. I am sure you will get answers. I also reckon you probably have some really logical reason for wanting to control your rig with your computer. That admitted, I will dive right in and ask why you need control software, adding one more task for your computer. The TS-850 has a beautiful and functional front panel, with all necessary controls, right there, where you can punch the neato buttons and turn the neato knobs.

On a DSP rig with a menu system where one knob can do maybe 48 things, I can see why maybe one would wish to computer-control it. Even then, those rigs allow you to define that knob and usually four pushbuttons surrounding the main tuning knob so they perform your favorite most-used functions.

I hope your inquiry is answered, but sometimes there is beauty in simplicity. If you have a complicated physical setup I can see possibly wanting to control the rig from another corner of your shack or something, but sooner or later, you have to speak into it or key it or keyboard it in order to transmit. The latter means, usually, dropping out of the control s/w and into special s/w to operate a TNC. You also might want to keep your log on the computer, look up calls, etc. It all CAN be done. However, I would try to keep it as simple as possible. It is admittedly fun to experiment, and I have done that, but I have tried to simplify & optimize the operating position (and that includes a laptop on the wing of the desk, but not controlling any transceiver).

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible
set of coordinated logging and packet features.

XMLog is available on my home page:

http://www.xmlog.com

A new version (1.27) is now available and includes
some changes of special interest to non-US hams:

- Support for dd/mm/yy date formats.

- A fix for a problem that occurred when the
GMT offset was set greater than nine.

Coming in May - support for Internet PacketCluster nodes.

*** Feedback ***

Let me know if you:
- Want more info
- Can't fetch the file
- Want a diskette instead

Have fun...

While I find Burt to be a sad and pompous bigot, I have seen nothing that would prompt me to want him silenced in this fashion. The best thing one could do is ignore him. Even these postings do nothing but feed his ego.

Being successful in having someone censored simply because of goads and non-sequiturs sets a very dangerous precedent, IMO.

2035. New logbook software

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-01 00:00:00 UTC
From: Sipke Wagenaar <fcb@worldonline.nl>
Message-ID: <01bc5669$c9d89360$408f099a@sw>
Source record: 199240

May 1, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

I've always been fascinated by amateur radio and recently decided I might give it a go. I even like the idea of communicating with CW. But I've read quite a few posts on various ham newsgroups, and I must confess that I'm disheartened by what I've read. There seems to be a surplus of venom, short tempers, and a general fatalistic malaise (what I interpret to be a reaction to disappearing bands). I've by no means explored every niche in the hobby, but the only upbeat folks seem to be a few QRPers and a lot of Japanese. Oh yeah, there seems to be unfettered, thoughtless, "Jap-bashing." Someone even wrote about celebrating Pearl Harbor day--I suppose so he can keep his hatred fresh. And these most hideous types are the worst communicators; the irony is too obvious. One thing I'd like to make clear: I'm almost 40-years-old, so I'm not going to get into the "just a bunch of old white guys" argument.

Whatever. Are there any untwisted minds out there? Surely you're in the majority? I'd like to exercise my desire to communicate over the airwaves, but why bother if all I'm going to be talking to are a bunch of assholes?

2038. [ANN] Major new release of MacGPS Pro

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-01 00:00:00 UTC
From: lwjames@csn.net
Message-ID: <lwjames-ya023180000105971338150001@news-2.csn.net>
Source record: 199243

James Associates is proud to announce a major upgrade of their popular
MacGPS Pro software.

This new version supports direct import of maps in GIF, JPEG, PICT,
Photoshop, MacPaint, Silicon Graphics, and QuickTime Image file formats.

It now supports the Garmin receivers with built-in Depth Sounders,
including display of depth on the track log on the map.

MacGPS Pro is used by thousands of people around the world to connect their
Macintosh to their Garmin GPS receiver. It has been refined over the years
by many new releases with additional features requested by happy users. It
is the only Mac GPS program which can display track logs, routes and
waypoints transferred to and from your GPS receiver, as well as your
current location, on a map. The background map can be almost any scanned
map, any map downloaded from the Internet, or any map copied from a CDROM
or another Mac program.

MacGPS Pro will work on almost any Mac, even an old one. It does not
require a portable Mac with a CDROM in order to show your current position
on the map of your choice.

did you read the one where Bill Gates and Pres Clinton
and Boris Yeltsin were called to confer with God?

God said "I called you here because you're the 3 most
important men on Earth. I want to tell you I'm going to

shut down the experiment. Earth ceases to exist from
seventh day after you get there.

Back on Earth, Boris Y called a Press Confrence.
"I have bad news and worse news." He said.
"Bad news is there really is a God.
"Worse news is he going destroy Earth in 7 days."

Bill C. called a conference.
"Good news, bad news," he said.
"Good news, There really is a God.
"Bad news is he'' destroy Earth in seven days."

Bill G. called his own confrence among his staff.
"I have good news and great news.
"Good news is God says I am one of most important
people on Earth. Great news is we don't have to
worry about Windows bugs anymore."

So much for Bill G.

I avoid MS when I can.

Lou Hinshaw WB0NRU replies:
Very concisely written, Sir, I couldnt' find anything to snip and
leave the post readable.

However, I must dissent with your evaluation about "where
the world is going" in the above, inasmuch as the software hackers
must await the hardware nerds before proceeding to the next
generation.

If someone don't build it, NO ONE can use it.

there are many hobby and evperimenter types who do radio AND
computer tinkering. The ones who drifted away werent the
experimenters, they were the savers. Different group, including
you, if I understand your post.

I still use odd devices, some of which I make myself, to work on radio

and computers and whatever else takeds my fancy.

Long Live Lord Tinker!

I have the same impression as Alan. I just bought a study guide and
started lurking here for information. It seems odd to rationalize that
the rudeness is specific to
the ng and the same people are somehow different while using their
radios.
I've been following many ng's for several years and I was completely
shocked
that this one would have so many jerks posting.

Hams are afraid of everything. If I said boo to one he would pee in his
pants, thus there is a need to ACT tough. They need to control because
in their own life they are meaninless little twits.

As you pointed out no one has to read what I say.

you didnt say if your home happens to have metal sideing or not? If
thats the problem hang an antenna in the window. Also car radios are
more sensitive then your average home radios/stereos. Get a GE super
radio III from Kmart for around $50.00 you'll be glade you did...Jim

The problem with living in NJ is you have no property rights.
It is his land and if he is liable for the towers failure, he
should be free to install it. At least he will sue. Guys who
bend over for permission to put up a 50 foot tower are fools.
You should not need local permission when you are federally
licensed. Remember PRB-1? oh yea, that got trampled since
the ARRL allowed it to be adopted as a "non-binding" resolution.
If he gets the OK for 100 foot, I bet you he already planned
on this. Making the point is what he is trying to do...

Sure, but there may be times when you don't want to sit there punching the
neato buttons or turning the neato knobs. Two applications come to mind
instantly. The first is automatic forwarding operation. You want the radio to
automatically scan and log autoforwarding frequencies, noting stations
available, signal strength, and BER. This then lets the computer choose
the optimum forwarding frequency at any given time for a particular message.
Second is remote control operation, where you may want to use the radio from
a remote location, IE from work for example, to do a bit of operating. Being able
to control all the functions remotely via the computer then becomes essential.

>I hope your inquiry is answered, but sometimes there is beauty in

A competent multitasking OS will let you do all those things at the same
time. Linux is ideal, NT will do, but even Win 95 will sometimes suffice.

Er, Hi...

I have done the standard TH-79A mod a radio (removing D304, D307), and have the 2 new menus (19 and 20), but cannot seem to tune below 118Mhz. I am assuming I have to change the VFO limits (menu 13), but it won't go below 118. Is the mod for the 79A(D) differant to the 79A?

Actually, in my twenty-five years+ of writing about FM, repeaters and coordination, NARCC is one of the very few coordinators that can truly be called an overwhelming success. This is because NARCC lrearned early on how to say "NO" to adding more unnecessary repeaters to overcrowded bands and how to successfully remove nuisance repeaters from the air. The rest of the nation could learn a lot by emulating NARCC's high standards.

Ed,

If the ham radio community spent less of its time complaining and more
of it supporting the ARRL's petition to "privatize" the regulatory
enforcement process, most of these problems -- and the operators
causing them -- would be gone in short order.

Best thing to do is use code exams only once. That way you don't have to worry about it being on someone's computer or covertly recorded using a microcassette recorder. VE groups are free to generate their own code tests, they don't have to use the "canned" ones from their VEC. The W5YI VEC encourages their VE teams to generate their own code tests because of this. It's easy to generate your own code tests using programs like Morse Academy, SuperMorse, or other text to code programs that are sound card compatible. Besides, you can make your tapes with just one code test on each side, that way you don't waste time at a test session fiddling around trying to find the right test which happens a lot when using tapes with 3 or 4 tests on each side. Put the tape in, rewind if necessary and you're there. By keeping code tests "session specific," these worries are eliminated and if someone decides to capture it on a computer or recorder, no big deal because it won't be used again and anyone trying gain advantage from it will only end up being hosed at the next session.

Many VE teams generate their own tests these days so this apples and
oranges comparison on ARRL and W5YI tests is academic in many cases.

Enjoy the new radio. All the features are a little overwhelming at first.
But they are also nifty features that will make using the radio fun. Stick
with it and reread the manual after you are a little more used to the
radio. You will get lots more out of it.

Enjoy

When I was deciding on a new radio I looked at the Yaesu
8500, Yaesu 8000 and the TM-V7A. They are all nice rigs.
The 8500 seemed a bit complicated to me. I'm not
comfortable with a radio which had the knobs on the mike

(its a popular radio that many people prefer I am not knocking it I like Yaesu products). Reports people had given me indicated the Yaesu's needed the manual for effective use (others implied I am too half-witted to operate a radio of such immense savoir faire -- kiss my ass Bozo). The Yaesu 8000 is also a fine radio but I needed alpha display. I have been told he 8000 is also missing sub band mute. I am not Yaesu bashing. Nor am I a blow hard Kenwood devotee.
Kenwood TM-V7A
I liked the 733. It has lots of features BUT without the manual the programming was so complicated your screwed. I also liked the 733 display BUT many the characters were way to small to read while driving. The buttons were to small n(for my fingers) on the 733 and the function button was in a bad spot and way too small. Operation while driving at night was not easy (for me). When you wanted to add a frequency to memory YOU had to keep track of which memories were in use and which were unoccupied. There was not built in CTSS decode ($60 option). Scanning was slow. The last straw that made me upgrade was no alpha memory. I have 40 repeaters in memory and it annoyed me because I was never sure which repeater I was doing the bla bla on.

The TM-V7A seems to be the heir apparent to the 733. It has lots of improvements in the display, programming, button placement and heat sinks. The TM-V7A addressed all the problems above. It has ALPHA MEMORY ! Its easy to read. Its very easy to program. It scans fast. It has all the features of the 733 and lots more in a much easier to use package. EXCEPT ONE FEATURE - NO MUTE - If you want to express your Joy about this to Kenwoood they can be reached at 3106395300 when the talking computer chip answers (to tell you what a valued customer you are) hit 2 then 6 OR you can Email them at cuyeda@ix.netcom.com They are slow to answer More on MUTE later.

The display looks terrible in the ad's but even in direct sunlight the display looks great. It gets lots of "wow's" from friends.

The radio seems to be bug and glitch free. I detected no hangs or problems or memory losses. All the features I tried worked fine. The manual is about 20 pages smaller than the 733 and is indicative of the effective menuing. After a few days with the radio you can put away the manual and leave it away.

Display characters are bright white on a blue background, are very large and easy to read from the drivers seat. When you select a band it displays that band in even larger characters. Even the small words on the display are easy to

read from the drivers seat. There is a reverse video setting (blue characters on a white background) for those who like that or just need a change now and then. I like normal mode my girlfriend like reverse video mode on the display. You can read and work almost all the radios features at 60 miles per hour.
Press the menu button and you can click through a bunch of menus. Each of those menus can take you through sub menus. The "display" menu for instance will allow you to change the brightness, contrast, reverse video or normal, or auto dim. In auto dim you select the brightness you want the radio in. Then when you hit a button the radio gets brighter. after a few seconds it dims again for normal operation.
There is one menu that displays instructions for all the features such as cross band repeat and deleting memories and all sorts of other features.
The menus for adding auto dial memories etc. are all easy to understand.
You can set one band to stop scan on carrier and the other to pause and resume. Or set both bands the same way etc.
There are about 20 menus and each has sub menu options.

The last menu you accessed is the menu that pops up when you hit menu again. That's nice if you doing the same thing over again. Say you are toggling between normal display and reverse display. The menu take you right back there. If your entering lots of memories the display take you back there etc.

You can reassign the buttons functions if you want.

MENU# Sub Menu

1 Transceiver guide: (instructions for loads
like cross band repeat etc.

2 Front Panel: Number of Channels or "Visual
Scan", Power on message, Multi-
Function Button labile 3
Display reverse, Display
contrast, Display
Dimmer, Auto Dimmer.

4 MEM chan lock out, VHF/UHF Mem
Channel Ratio,
Mem channel name, Auto PM Channel
Store.

5 Automatic repeater offset,
Offset Frequency,

6 Programmable VFO (Upper/Lower
limits (3 sets
of limits per band))

7 DTMC Number storing

8 Scan resume method

9 Advanced Intercept on/off
(Intermode
reducer)

10 Automatic power off

11 Transmit time out timer

12 DTSS Page code transmit delay,
auto page
cancel, Page Answer back

13 S-Meter squelch, S-Meter
Squelch Hang time

14 Beep volume, Speaker config,
Voice
synthesizer (with optional board).

15 Data Transfer rate, Data TX/RX
Band

16 Microphone control, Programmable
function
keys, DTMF Monitor.

17 Repeater TX Hold
And more!

You can do most things right from the mike such as: reverse offset, change power setting, change frequency, direct enter a frequency, move memory to VFO or VFO to memory, turn off squelch, go into Function mode, start scanning, stop scanning, go to call channel, scan call channel and another channel continuously, change the dual bands to VHF & UHF or VHF and VHF or UHF & UHF.

You can listen to AM and hear aircraft communication. I can pick up several airports and lots of "jet chatter" in a 50 mile radius of my car. I can pick up maritime communication no problem.

There is a simplex indicator mode which starts flashing if a station is within simplex range (when you activate it).

The CTSS decode works very well while repeater surfing. If you hear a repeater just press the tone button for a second and CTSS scan kicks in. It goes through the PL tones and beeps and flashes when it hits the correct one. If the station stops transmitting the CTSS scan pauses and waits for the station to transmit again. This means only one pass through CTSS is needed to find the right PL.

Programming memory:
Set the channel PL offset etc. on VFO mode then hit the function key. The memory display pops up and shows a solid triangle next to the memory number if the memory is occupied. It displays an empty triangle if the memory is not occupied (this prevents overwriting occupied memory as I used to do many times with the 733). Hit memory on the mem number you want and your done. Much improved.

To give that memory a name - display the memory number you want and hit the menu key. Stop at the memory menu option and select name. Enter the name and hit set etc. The name is programmed in. Its intuitive (at least for me). I have done it while driving.

There is a memory lock out that allows the scan mode to
skip a memory. In case you have a repeater where a blabber mouth wont shut up. The radio is simple enough to do all this
while driving.
One feature I like is -
If you were in scan mode when you turned off the rig. When you turn the radio on it jumps right back into scan mode! SCAN is fast. It looks like the thing is scanning 7 to 10 memories a second. Scan is either stop on carrier or stop for a few seconds. You can set each band differently if desired. You can set 2 upper and 2 lower scan limit ranges for each band. I suppose you could scan 144 to 148 then jump to 150 to 154 mhz with the second set of limits. I have not needed or used the second limit. You can also scan a "call channel" and another channel on each band. The display looks pretty busy when all the scans are going.

VisualScan: I don't see what good this is. So I can see there is activity on near by frequencies. What's the big deal I still have to scan them. I just don't get why they went through all the trouble.

MUTE mode is missing.
Kenwood for some reason left off the MUTE mode on this

radio. Its on the 733 but not the TM-V7A. This is the only complaint I have. I would not be shocked if later model have mute. The mute key is unassigned on the mike and probably only needs a software change to work. If you want to express your Joy about this to Kenwoood they can be reached at 310639-5300 when the talking computer chip answers (to tell you what a valued customer you are) hit 2 then 6 OR e-mail Kenwood at cuyeda@ix.netcom.com They are slow to answer. Despite missing mute I have learned to adjust the volume controls and am not going back to the 733 that's for sure.

There is no wireless memory transfer to another like radio. Kenwood says there is software coming to do this.

MODS:
There is a Mars CAP mod for Out of band transmit floating around. Basically you you take off the cover and snip a wire.

INTERMOD:
I live in Intermod hell. Being just across the Hudson river from New York City there is a constant assault from the building top antennas. I own a Yaesu FT-50R, Kenwood 733 and Kenwood TM-V7A. The Yaesu when hooked up to a roof antenna is almost unusable on some bands due to the Intermod. I ended up buying a $66 notch filter from PAR. That eliminated 98% of the problem.

The TM-V7A has an "anti intermod" mode. The TMV7A is better than the other 2 rigs. But it still gets blasted when I'm in the city. Just outside the city I get almost no Intermod but if your looking to totally eliminate Intermod with this radio you are going to need a notch filter.
The Antenna connection is a single PL259 with an internal duplexer (or is that a diplexer).
WHAT I DON'T LIKE
1) while programming the radio from a menu you have to pick a selection in under 10 or 20 seconds. What's the hurry? They could have left a little more time for the driver to decide. 2) Mute and wireless transfer were stupid features to leave off the rig.

In reality this is a very easy rig to use while driving. Its full featured and glitch free. You don't need a
manual (once you spend a little time with it). I will be picking a second one up for home use (when $$$ permits it).

I am using the detachable display. The cables from the 733 work on the V7 but the V7 cable kit came with a plastic holder you click the display in. When you want to remove the display you just unclick it from the holder. Its easier than the 733.

The TM-V7A has LOTS more heat sinks inside and outside than the 733 has. The mod for Mars Cap is just a snip of a wire. Audio reports have been very good.

I like the refinements on the V7A I miss mute but I aint going back to the 733. I am considering buying another for home as a replacement for the 733 at home.

I encourage your to write about what you like and especially what DON'T LIKE or would improve on your radio. The corporate adds only tell good news about zillions of features - not how impossible they are to use. Few of us want to buy the 100+ page manual to see what we are really going to be working with. On Internet we can read what real hams have to say not what a magazine that's trying to sell advertising has to say.

I am having trouble picking up an FM radio signal. I can pick it up in my car, but nowhere in the house. I bought 2 different basic amplifiers, but they dont help I also tried rabbit ears & a dipolar antenna. I would like to find a way that I can pick up this station without having to put up an outside antenna, because I plan on moving in a few months. Does anybody have a sugggestion? Please respond to my email address--ENZIOB@aol.com & THANKS!!

>Under terms of the Report and Order in ET Docket 96-8, released April 10,
1997,
>the FCC has announced that it will allow high gain antennas
>for unlicensed transmitters operating in the 2400 and 5800 MHz
>Part 15 allocations. These bands are shared with the Amateur Radio Service.

I read the R&O, as well as the original NPRM, last night. The FCC has a pretty decent web site, though posting Word Perfect files and their ASCII output is not quite the same as HTML-izing.

>Under the new rules, very high gain antennas may be deployed at 2400 and
>5800 MHz. Certain transmitter power reduction restrictions apply at 2400 MHz
>but unlimited gain systems may be installed at 5800 MHz. These systems will
>enable high speed Internet access using unlicensed systems. You can expect
to
>see these systems deployed rapidly as soon as 1998 to provide non-commercial
>and commercial services on these frequencies.

To clarify: Very high gain antennas may be used in the 5800 MHz band but ONLY for "point to point" operation, such as wireless T1 links. Point to multipoint (access systems, pseudo-cellular, etc.) and sectorized (a bunch of directional antennas in a circle) systems are explicitly prohibited from using unlimited ERP; such systems are still limited to 4W ERP, and have to derate their transmitter power dB for dB when antenna gain goes up.

At 2400, it's 1 dB TPO reduction per 3 dB antenna gain increase.

These bands are ONLY for spread-spectrum use. Narrowband is prohibited at such power levels via spectral-density caps; if the bandwidth goes down, the power goes down too. However, frequency hoppers can dwell up to 400 ms on a sigle frequency, which can create noticeable interference to some kinds of narrowband operation. Direct-spread systems have no such effects.

The R&O actually makes a halfway decent primer on spread spectrum, in part because it discusses (and provides) new, clarified definitions for some of the terminology!

When I read these recent FCC rules, dollar signs swell in front of my eyes. Nice ones, not the boodlesque kind that so many govt. decisions display. Somebody is going to make money on this stuff. I wish I had the resources. Oh well -- anybody want to hire us for a consulting engagement? :-)

If any of these cowards actually does contact your ISP, I'll be glad
to write to them defending your right to make a fool of yourself on
UseNet. I hate these censorship cowards, and as long as you're not
spamming hundreds of newsgroups or sending me Unsolicited Commercial
E-mail, I don't care what you write. I have a killfile, and I know
how to use it. I also have an Ignore key which works very well.

For a suitable fee, I can even instruct the cowards on how to use
them.

Don't lecture to me about UseNet conventions, you sanctimonious little twit. UseNet conventions allow for the widest possible freedom of speech. If you think Burt is violating "conventions," take it up with him. If he's breaking the law, report him to the cops. Otherwise, I suggest you mind your own business.

>generated every day, some order is necessary to make it something other
>than so much noise. I generally ignore Burt's trolls for a rise out
>of someone, but his last post is essentially commercial advertisement
>for something completely unrelated to any of the newsgroups to which he

I didn't notice any such thing, but if that's the case, one post is hardly enough to fuel a campaign to censor ALL his posts.

<strawman deleted because of fire hazard>

>Another clue is that many of the more popular newsreaders including the
>one I use (unfortunately) don't have killfiles.

Netscape is not a newsreader, it's a Web Browser with a pathetic, broken excuse for a newsreader. If you're serious about getting a real newsreader, I can recommend one or two for you. In the meantime, there are keys which let you skip any posts you don't wish to read. Or does your broken newsreader force you to read every word posted in the groups to which you subscribe?

>And Net-Nazis? Whew,
>there's a good one.

Yes, it *is* quite an accurate description of censorship advocates. If you can get Burt censored, what's to prevent me from getting you censored? Then they'll come for me. I prefer to put up with opinions I don't care for, rather than having some self-appointed do-gooder telling me what I can read.

The ham groups are relatively small, with only a few dozen messages a day in the two groups I follow. Ham radio is dying, in case you hadn't noticed. If it weren't for the stupid code arguments and a few For Sale ads, this group (rram) would be nearly dead. If Burt can wake up a few brain-dead hams with his trolls, I say that's not necessarily a bad thing. If you want more thoughtful threads, start some yourself. Just don't start a campaign to shut a fellow ham up because you don't like what he says, because I'll fight you tooth and nail. That kind of crap is part of what's killing ham radio.

You can't really hear chirpsounders.

Chirpsounders crawl up the frequency band.
You can see them on spectrum analyzers, and they
don't move real fast, but don't stay long
enough on any frequency to gurgle.

Normally you exchange YOUR information with the other station. The other person tells you about their station, location then it's YOUR turn. I hear most hams ASKING the other station about themselve's as well.

You seem to have an attitude problem.

It possibly comes from the fact that it continues day after day and one would hope that the ARRL (the largest organization representing amateur radio) would find some way to work with the FCC to put an end to it. Why not extend the VEC program into volunteer monitors working with FCC approval and local authorities. I'd support it. Has the ARRL suggested it?

I'd be grinning like a dead opossum having the authority to confiscate equipment from some of these yaa hooo's. Hell you could probably fund the program through the sale of confiscated equipment.

Amen!All you poor babies pissing and moaning about Burt are very
humorous.Whether I agree with him or not is beside the point.I will
fight to the death to make sure that he has the right to say whatever he
wishes.If you don't like it ignore it.That is the problem with a bunch
of people in this country,they don't like something so rather than not
rewd it or turn it off,they want to censor it.To all of you
people,especially the anti-gun morons KISS MY ASS!!
Quit being so damned thin skinned!If you don't like his opinion,don't
read it.

73,
Larry Ke4rur

If I am reading this correctly. we have a gentleman who owns a tower which is on residentially zoned property. This tower which is approx 90 ft, is rented out to various users.

There are two other entities with 200 ft towers (water and regular) who also rent out. Their property is zoned commercial. (i:e: higher taxes).

It looks like this gentleman wants to make his tower competitive with the other two without a zoning change.

Do I have this right ? If so he's lucky he hasnt been taken to court for improper zoning use. So maybe this is a pre-emptive strike, I havent figured out a basis for his action. Help.

The Murgas Amateur Radio Club will be running K3YTL during the entire June VHF Contest(June 14-15) 1997. The location will be FN11uh in NW Luzerne County. All bands from 50 MHz up to 10 GHz will be run, including FM. Look for us around the calling freq's. FM will be on continuously on 6m, 220, 440. For 2m FM will be on every hour starting at about 5PM on Saturday. The best thing to do is work us on a lower band then set up a sked for the higher freqs. We can usually work everybody within a few hundred miles(obviously the weak signal modes fare better.) You can gauge how effective your station is by seeing if you can work us and if so how well. You will hear us definitely, see if we hear you. All you need to send is call and grid square. There are net sites for that or you can ask someone. Contacts are appreciated.

SB QST ARL ARLB022
ARLB022 FCC proposes, ARRL opposes vanity license fee hike

Last month, the FCC proposed effectively raising the fee for a vanity call sign from 30 dollars to 50 dollars for the 10-year license term. Now, the ARRL has asked the Commission to postpone the higher fee until after all four vanity call sign gates have been opened. In comments filed April 23, the ARRL told the FCC that it does not object to the fee increase per se but said that it wants all hams to have an opportunity to request a specific call sign under the current fee schedule.

The fee increase was among those included for all FCC-regulated services--including broadcasters and commercial satellite services--in the NPRM in MD Docket No. 96-186. Under the proposal, the FCC ''rounded up'' all FCC-imposed 3 dollar annual fees to 5 dollars per year--the lowest fee in the new schedule. The ARRL noted in its comments to the Commission that because projected revenue from the vanity fee increase ''significantly exceeds'' the revenue needed to cover the costs of administering the program, a delay would be reasonable. The ARRL also asked the FCC to limit the vanity call sign fee to the minimum it needs to recoup its costs to administer the vanity program but ''without rounding to a significantly higher fee.'' The FCC adjusts its fee schedule every year.

To all radio amateurs

SB PROP ARL ARLP018
ARLP018 Propagation de KT7H

Solar activity was up a tiny bit last week, but the daily solar flux
was still below the previous 90 day average of 74 on each day.
Solar flux peaked slightly at 73.1 on April 27.

April 26 to 29 had very quiet geomagnetic indices, with an A index
of 4 each day and many periods with a K index of zero, the best
there is for HF conditions.

The projection for the rest of May indicates more flat conditions,
but of course this is based only upon the previous solar rotation.
Since there has been no significant activity over the past month,
then there are no known really active regions to rotate into view.

Sunspot Numbers for April 24 through 30 were 13, 12, 32, 17, 17, 12
and 0 with a mean of 14.7. 10.7 cm flux was 69.8, 68.7, 70.9, 73.1,
72.4, 71.9 and 72.6, with a mean of 71.3. Estimated planetary A
indices were 15, 7, 4, 4, 4, 4, and 11, with a mean of 49.

in
>the majority? I'd like to exercise my desire to communicate over the
>airwaves, but why bother if all I'm going to be talking to are a bunch
>of assholes?

Alan, are you judging that the majority of us might just be a bunch of
"assholes" by the content of messages posted on an Internet newsgroup?
(note I did NOT say by the kind of people on this newsgroup)..

>
>..... I've by no means explored every niche in the hobby,

Alan, I cannot find you in the latest quarterly SAM callbook, so yes, I
reckon you have NOT "explored every niche of the hobby". Good Grief.

My apologies for repeating that term you used, but you said it. THIS,
Alan, is not Ham Radio. This is USENET. How about getting a ham
license, getting on the air, and finding out for yourself what ham radio
is all about? After 49+ years of being a ham - ex-W2ZOJ, 1948 - and
operating all modes except Clover and PactorII, I think I've explored a
lot of niches of the SERVICE and hobby. Only if I tune to a few
notorious frequencies do I hear what you read about here in this
newsgroup. I just don't waste my time listening to them. They have
(maybe for their whole lives) become jaded and twisted and
representative, percentage-wise, of that segment of our society that has
gone to hell in a handbasket. Tune elsewhere (if you are a ham, of which
I find no proof), and join the majority.

If ham radio had degenerated to <nothing but> the kind of stuff we kick
around here on this NG at times, I would burn my license. There are
nearly ten times as many hams per capita now as there were when I was
born in 1934, and even taking into account the schism that has arisen
over the reason and need for Morse code testing, and also because of the
advent of the no-code license which obviously puts a huge percentage of
present-day hams on the air with no exposure to Morse code whatsoever,
this is a great service and a great hobby.

It is good to air out our laundry here on the Internet, but I prefer to get on the air and do what most hams do -- communicate with friendly, decent, different human beings whom I have found for the most part (by far) a credit to the Amateur Radio Service.

From ARRL Headquarters
Newington CT May 2, 1997
To all radio amateurs

SB SPCL ARL ARLX011
ARLX011 Hams scaling back flood relief operations

As flood waters along the Red River continue to recede in Minnesota and North Dakota, hams in the flood-stricken area are taking a breather. Some hams are taking advantage of the lull in the action (and a reported overabundance of willing ham radio volunteers) to be with their families and to check on their own flood-damaged homes and property, although roads in and out of a few areas remain impassable.

Reports from the Grand Forks, North Dakota-East Grand Forks, Minnesota area this week said the Salvation Army ham radio operation at Grand Forks Air Force Base had been shut down and moved to a Kmart parking lot in Grand Forks. Even as the need for emergency communication abated along with the flood waters, operators from other areas have continued to arrive in the area or to volunteer their services if needed. North Dakota Section Manager Bill Kurtti, WC0M, reports the Salvation Army is making heavy use of HF and 2 meters for its communication needs--especially at its canteens and relief stations. But the need for additional emergency and backup communication has subsided as telephone service has been restored in many areas.

Harold McConnell, WA0YSF, of Cavalier, North Dakota, says ''the worst seems to be over.'' McConnell reports that he and Don Thomson, KB0YKD, also of Cavalier, were taking turns working in the emergency operations center in the city of Pembina, where floodwaters crested just below dikes. ''We have been told to cease 24-hour operation by the Pembina County EOC and have scaled back to an 8 AM to 8 PM operation now,'' he said in a report to Kurtti. ''That should help give people a rest as we are getting a bit stressed out.''

According to Minnesota Section Manager Randy Wendel, N0FKU, the impact of the devastation has not been lost on the hams who've been

volunteering in the flooded areas. Wendel said he'd heard a ham on a North Dakota HF net talk about his two days of helping out in the flood zone. ''The one thing that stuck in his mind was seeing people crying and wiping tears while trying to eat their meals provided to them while in the shelters,'' Wendel said.

>> the program through the sale of confiscated equipment.

So what you're saying is to create a system of enforcement that would be perfect breeding ground for corruption. A new "no tolerance" policy for malicious violators the same as is in our public schools. All it would take would be for one "monitor" to get pissed off at another ham and call the cops. They'd confiscate private property without due process and we'd have even more of a police state. Welcome to Amerika.

FCC PROPOSES, ARRL OPPOSES VANITY LICENSE FEE HIKE

Last month, the FCC proposed effectively raising the fee for a vanity call sign from $30 to $50 for the 10-year license term. Now, the ARRL has asked the Commission to postpone the higher fee until after all four vanity call sign gates have been opened. In comments filed April 23, the ARRL told the FCC that it does not object to the fee increase per se but said that it wants all hams to have an opportunity to request a specific call sign under the current fee schedule.

The fee increase was among those included for all FCC-regulated services--including broadcasters and commercial satellite services--in the NPRM in MD Docket No. 96-186. Under the proposal, the FCC "rounded up" all FCC-imposed $3 annual fees to $5 per year--the lowest fee in the new schedule. The ARRL noted in its comments to the Commission that because projected revenue from the vanity fee increase "significantly exceeds" the

revenue needed to cover the costs of administering the program, a delay would be reasonable. The ARRL also asked the FCC to limit the vanity call sign fee to the minimum it needs to recoup its costs to administer the vanity program but "without rounding to a significantly higher fee." The FCC adjusts its fee schedule every year.

HAMS SCALING BACK FLOOD RELIEF OPERATIONS

As flood waters along the Red River continue to recede in Minnesota and North Dakota, hams in the flood-stricken area are taking a breather. Some hams are taking advantage of the lull in the action (and a reported overabundance of willing ham radio volunteers) to be with their families and to check on their own flood-damaged homes and property, although roads in and out of a few areas remain impassable.

Reports from the Grand Forks, North Dakota-East Grand Forks, Minnesota area this week said the Salvation Army ham radio operation at Grand Forks Air Force Base had been shut down and moved to a Kmart parking lot in Grand Forks. Even as the need for emergency communication abated along with the flood waters, operators from other areas have continued to arrive in the area or to volunteer their services if needed. North Dakota Section Manager Bill Kurtti, WC0M, reports the Salvation Army is making heavy use of HF and 2 meters for its communication needs--especially at its canteens and relief stations. But the need for additional emergency and backup communication has subsided as telephone service has been restored in many areas.

Harold McConnell, WA0YSF, of Cavalier, North Dakota, says "the worst seems to be over." McConnell reports that he and Don Thomson, KB0YKD, also of Cavalier, were taking turns working in the emergency operations center in the city of Pembina, where floodwaters crested just below dikes. "We have been told to cease 24-hour operation by the Pembina County EOC and have scaled back to an 8 AM to 8 PM operation now," he said in a report to Kurtti. "That should help give people a rest as we are getting a bit stressed out."

According to Minnesota Section Manager Randy Wendel, N0FKU, the impact of the devastation has not been lost on the hams who've been volunteering in the flooded areas. Wendel said he'd heard a ham on a North Dakota HF net talk about his two days of helping out in the flood zone. "The one thing that stuck in his mind was seeing people crying and wiping tears while trying to eat their meals provided to them while in the shelters," Wendel said.

BS7H, SCARBOROUGH REEF, IS ON THE AIR!

The 1997 DXpedition to Scarborough Reef, BS7H, hit the airwaves at approximately 0445 UTC on April 30! Scarborough Reef is a territory of the People's Republic of China, where it's known as Huang Yan Dao. The reef consists mostly of rocks poking out of the Pacific, only a few of which are large enough to support (just barely) a compact ham radio station and antenna. Propagation and weather have been reported good. The BS7H team continues to put QSOs in the log at a rapid clip. Most areas of the world

have reported strong signals, while propagation to central and eastern North America has suffered from a moderate increase in geomagnetic activity.

Operating frequencies: CW--1826.5, 3505, 7005, 10105, 14024, 18073, 21024, 24895, 28024 and 50110 kHz; SSB--1826.5, 3790 (3750 secondary), 7065, 14195, 18115, 21295, 24935, 28485 and 50110 kHz; RTTY--14083 and 21083 kHz. BS7H will also be QRV on the Russian RS satellites.

The BS7H team has three HF stations simultaneously on the air now. The six-meter beacon is off the air due to a technical problem which they hope to have resolved soon. The team reports it has logged a total of approximately 7000 QSOs as of early today (May 2).

Tim Totten, N4GN, is keeping the rest of the world up-to-date via the Internet. He says that, unlike the VK0IR DXpedition earlier this year, there will be no on-line Internet log search capability for the BS7H 1997 operation. The team is using paper logs, and there is no acceptable method of transmitting log data from the reef. Also, there is no e-mail reflector for the BS7H operation. Bulletins are posted to the DX reflector and to the BS7H 1997 home page (http://www.iglou.com/n4gn/sr/)

Martti Laine, OH2BH, who helped organize the previous DXpeditions to the reef, had this to say: "Judging the size of the pileup, Old Timers and QRPers alike have fully accepted this small piece of land to be their target QSO for this week. DX is alive and well this week!"

The BS7H operation continues through May 6, 1997. JA stations QSL via JA1BK. All others QSL via W4FRU. For additional information, visit the BS7H 1997 home page, http://www.iglou.com/n4gn/sr/, or contact Tim Totten, N4GN, e-mail n4gn@iglou.com; fax 502-239-7766.--BS7H 1997 home page

APPLE TAKES EXCEPTION TO LEAGUE'S 5-GHz STAND

Apple Computer has taken exception to objections by the ARRL opposing Apple's efforts to deploy so-called Unlicensed National Information Infrastructure (U-NII) devices in the 5-GHz range. Earlier this year, the FCC made available 5.15 to 5.35 and 5.725 to 5.825 GHz to U-NII devices under Part 15 of its rules. The spectrum involved includes part of a secondary Amateur Radio allocation. The ARRL has filed comments opposing Apple's requests insofar as they would increase the potential for interference to amateur operations. Part 15 requires that unlicensed operations not interfere with other services. The U-NII devices would provide short-range, high-speed wireless digital communication.

The comments were filed in ET Docket 96-102. Three petitions for reconsideration were filed by various industry groups, but Apple's was the only one that concerned the amateur allocation. Apple said the League's objections "reflect the League's general opposition to any shared use of Amateur Radio Service frequencies, rather than the presence of any real threat to Amateur Service operations posed by Apple's proposal." Apple said the ARRL failed to show that non-spread spectrum U-NII transmitters using highly directional antennas pose any greater interference threat to hams than do spread spectrum transmitters using highly directional antennas.

At its April 3 meeting, the FCC relaxed the restrictions on the use of directional antennas in conjunction with spread-spectrum devices. Apple would like the FCC to treat U-NII directional antennas the same way.

"ROCKOON" LAUNCH SET FOR MAY 3

A group of space enthusiasts that includes several hams set May 3 for its second attempt to launch a rocket bearing ATV and APRS systems from the coast of North Carolina. Liftoff is set for 0615 Eastern Daylight Time. The original launch attempt on March 22 by the Huntsville Alabama L5 Society (HAL5)--a chapter of the National Space Society--ran into technical problems (see The ARRL Letter Vol 16, No 12 and Vol 16, No 13). According to Bill Brown, WB8ELK, the group's "balloonmeister," the high-altitude lift-off (HALO) project will use a rocket launched from a high-altitude balloon--a rockoon. The approach allows the small rocket to obtain a fairly high altitude before launched. This reduces the amount of air that can limit acceleration during the launch. The command to launch will be sent when the balloon is safely over open ocean and the rocket pointed away from land. The group has chosen a new balloon launch site--Hamstead, North Carolina, which is about 20 miles northeast of the city of Wilmington. The rocket launch will come some two hours following the balloon launch, when the balloon is more than 100,000 feet above the Earth.

The rocket will carry a 1280-MHz FM ATV system (3 W into a monopole antenna) and an FM packet radio with APRS formatted GPS data on 441.050 MHz. The call sign will be KE4ROC. The group expects the transmitter range to cover 700 miles at its apogee (maximum altitude)--expected to be some 400,000 feet or about 75 miles--which would include the East Coast, the Southeastern US and part of the Midwest. The balloon launch vehicle will carry an AM ATV transmitter (on 434.00 MHz) which will provide a live, color view of the rocket launch. The system will use a horizontally polarized antenna, and the call sign will be WB8ELK. Coverage from the gondola system should be approximately 400 miles at the rocket launch altitude, which would include the Southeastern US and parts of New Jersey and Pennsylvania, Brown estimates.

HF coordination nets will meet on 3871 and 7155 kHz. W4HTB and WA3USG will be the respective net control stations.

The rocket will parachute down for a water landing and a rendezvous with a recovery boat about 80 miles east of Wilmington, NC. Launch rain dates are May 4 or May 12. For more information, check out the group's home page at http://fly.hiwaay.net/~bbrown/ or e-mail bbrown@hiwaay.net.--Bill Brown, WB8ELK

WISCONSIN HAMS ASKED TO PREPARE FOR POWER BLACKOUTS

Hams groups in Wisconsin have been asked to prepare to help out in the event of possible power outages this spring and summer--some of which may be unannounced--because a significant portion of the region's power-generating capacity is out of commission. The Wisconsin Public Service Commission briefed state agencies in late April on the possibility of power blackouts--including local outages and "rolling blackouts" that could

adversely affect telephone service as well as police and other public safety agencies. The Wisconsin Reliability Assessment Group--a cooperative of the region's electric utilities--says that about one-third of the region's nuclear-powered generating capacity is "temporarily or permanently out of service." This includes several nuclear units in Illinois, a source of backup power for Wisconsin. The nuclear plants are scheduled to be back on line this summer. In addition, 12 of the state's fossil-fuel plants were scheduled to be down for maintenance during April and May. The greatest threat is from higher-than-normal power demand during hot weather--when air conditioner usage surges--although lightning damage from storms also could play a role, the Commission said.

Alan Wohlford, warning and communications officer, Wisconsin Emergency Management, issued the warning and asked Amateur Radio clubs and ARES and RACES groups--but not individual hams--to meet with local emergency management and public safety officials to coordinate any assistance that might be needed if normal communication are disrupted. In the event of power and/or telephone outages, all hams were being asked to be alert for emergency traffic, and mobile operators were being asked to placard their vehicles to identify themselves as hams who can provide emergency communication.

A statewide power outage may require the activation of the Badger Emergency Net (BEN) on 3985 kHz. For more information, contact the Wisconsin Emergency Management ham station: tel 608-242-3323; e-mail wc9aag@skywarn.cs.wisc.edu.

WOUNDED HAM-COP EXPECTED BACK ON BEAT SOON

Remember Dave Harvey, KE4VDP, the police officer from Lithonia, Georgia, who was shot in the line of duty last July? When Harvey began the long recuperation from his injuries, his good friend and colleague, Jim Sheppard, KT4FD, requested that hams send Harvey their QSLs to cheer him up and to wish him a speedy recovery (see "QSLs sought for ham radio cop shot in line of duty," The ARRL Letter, Vol 15, No 8.) . Harvey, a Technician since 1995, had never even received a QSL before. The response was tremendous! Sheppard this week forwarded this message of gratitude from Dave Harvey, who now is expected to fully recover and return to work:

"Just a word of sincere appreciation for all of you wonderful people in the Amateur Radio community that sent me so many QSL cards and gifts. I received well over 500 cards, and the gifts were truly meaningful. I would like to say a special thanks to Mrs Maria Lowe from Baldwinsville, New York, who has been in touch continuously through cards and letters and is a very dear person.

"The doctor is very amazed at my recovery after seven operations and says that I should be able to return to my regular duties after one more minor operation. All that will be left to do will be to heal up and get the strength built back up in my arm.

"Thank you all again for your thoughts, prayers and inspiration. After hearing stories from some of you, I realize just how fortunate I really am.

73, Dave Harvey, KE4VDP"

Sheppard said he believes the cards and letters from other hams played a big part in Harvey's recovery and added that he's looking forward to having his friend back on the job.

SISTER ALVERNA RETIRES FROM HANDI-HAM SYSTEM

ARRL Humanitarian Award winner Sister Alverna O'Laughlin, WA0SGJ--a mainstay of the Courage HANDI-HAM System--retired on April 28. "Sister" (as she's known) worked at Courage Center for 16 years, serving as educational services coordinator in the HANDI-HAM Program. However, her association with the HANDI-HAM System goes back much further than that. She was one of the original member-volunteers when the late Ned Carman, W0ZSW, founded the program in 1967. Sister was first licensed in 1967 as WN0SGJ, and now holds an Advanced Class license. She received the Humanitarian Award from ARRL for her good work with persons who have severe physical disabilities and sensory impairments.

Through the 30 years that WA0SGJ has been in HANDI-HAMS, she has helped thousands of newcomers along the path to their licenses, all the while remaining a very active amateur. Sister has a special love for county hunting, and has worked all counties (she's now a "wild card" for county hunters with similar aspirations, and her call is much sought after as she works HF mobile on her auto trips across North America).

Last Spring, Sister Alverna was in a car accident while on her way to the Midwest Division Convention, and sustained serious injuries to her leg and ankle. She has spent the past year recovering, but has maintained a part-time schedule at HANDI-HAMS. Her retirement will allow her to concentrate on getting well again, and she hopes to be walking this summer!

Retirement will not keep WA0SGJ off the air! Plans are being made to install her HF and VHF rigs at her new QTH in Rochester, Minnesota, soon after she moves there from the Twin Cities. Friends and well-wishers may contact Sister at wa0sgj@juno.com. There's a picture of Sister on the Courage HANDI-HAM home page, http://www.mtn.org/handiham/.--Patrick Tice, WA0TDA, Manager, Courage HANDI-HAM System

IARU AND PATU TO WORK MORE CLOSELY

The International Amateur Radio Union (IARU) Region One and the Pan African Telecommunications Union (PATU) have signed a memorandum of understanding which will lead to a closer relationship and cooperation in the development of telecommunications expertise and the Amateur Radio service on the African continent. The PATU was established in 1977 by the Organization of African Unity (OAU) plenipotentiaries as a specialized telecommunications agency. Its broad objectives include fostering and maintaining cooperation among member states to improve, expand, develop and use the telecommunication networks and services and to promote the establishment of multinational training institutes in Africa.

The memorandum of understanding provides for regular exchange of information and documentation to enhance the development of ham radio in Africa, at the same time supporting PATU's training and development objectives. Commenting on the memorandum of understanding, IARU Region One Chairman Lou van de Nadort, PA0LOU, said the agreement is a direct outcome of the African Development Program, which is aimed at expanding ham radio in Africa and establishing the Amateur Radio service as a national resource that deserves governmental support at meetings of the International Telecommunication Union and other telecommunication organizations.--IARU Region 1

SOLAR ACTIVITY INCREASES

Sun watcher Tad Cook, KT7H, Seattle, Washington, reports: Solar activity was up a tiny bit last week, but the daily solar flux was still below the previous 90 day average of 74 on each day. Solar flux peaked slightly at 73.1 on April 27.

April 26-29 had very quiet geomagnetic indices, with an A index of 4 each day and many periods with a K index of zero, the best there is for HF conditions.

The projection for the rest of May indicates more flat conditions, but of course this is based only upon the previous solar rotation. Since there has been no significant activity over the past month, then there are no known really active regions to rotate into view.

Sunspot numbers for April 24 through 30 were 13, 12, 32, 17, 17, 12 and 0, with a mean of 14.7. The 10.7-cm flux was 69.8, 68.7, 70.9, 73.1, 72.4, 71.9 and 72.6, with a mean of 71.3, and estimated planetary A indices were 15, 7, 4, 4, 4, 4, and 11, with a mean of 49.

EVERETT M. RENFROE, W9HG, SK

Ham radio veteran Everett M. Renfroe, W9HG, of Chicago, Illinois, died April 7, 1997. He was 93 and had been a licensed amateur for more than 75 years. Renfroe--a vocational high school teacher and administrator in his working years--was first licensed in 1921 as 9DOS. He recently was awarded a 75-year plaque by the Quarter Century Wireless Association. Renfroe also was a member of the ARRL and was the senior member of the OMIK Amateur Radio Network and recipient of that organization's special achievement award (see QST, Jan 1995, page 54). He is survived by a sister and brother and five children, including Bill Renfroe, W7IOV.

WILLIAM H. WIAND, N3WW (ex-W3BIP), SK

William H. Wiand, N3WW (ex-W3BIP), died April 25, 1997. He was 81. A ham for 65 years, Wiand served as Section Communications Manager for Eastern Pennsylvania from 1953 until 1955. As were most SCMs in Eastern PA during that era, he was a member of the Frankford Radio Club. In addition to being an ARRL member, Wiand was also a member of QCWA Colonial Chapter 166 and belonged to the Phil-Mont Mobile Radio Club and the Pottstown Area Repeater Team. Memorial contributions may be made to The Alzheimer's Association, 4195 15th St, Philadelphia, PA 19146.--Kay Craigie, WT3P

IN BRIEF:

* This weekend on the radio: This is a busy contest weekend. Participate in the ARI International DX, Danish SSTV, MARAC County Hunters CW and Ten-Ten International Net Spring CW Contests. The Massachusetts, Texas and Connecticut QSO Parties also are scheduled. See May QST, page 97 for details.

* Correction: In The ARRL Letter, Vol 16, No 17, our report on the shuttle refly of mission STS-83 said that the International Space Station (ISS) is a joint venture of the US and Russia. The ISS project also involves Japan, Canada, and the European Space Agency(ESA).--Rick Lindquist, N1RL

* Kenwood Service still in business: Despite rumors and reports to the contrary, Kenwood Service Corporation is still very much in business on both coasts, according to Kenwood's Paul Middleton, KD6NUH. Kenwood Service Center West held an open house April 25 at its new location at 13030 Alondra Blvd--No. 104, Cerritos, CA 90703-2257; tel 562-483-8740. The service center moved from Long Beach, California, earlier this year. Middleton said Kenwood Service Corporation is separate from Kenwood Communications Corporation, and the two service centers are "independently operated but chartered and regulated by Kenwood." Middleton, who's Kenwood's national sales manager for amateur and marine products, said the new West Coast center employs the same staff that formerly worked for Kenwood at the Long Beach location. No jobs were lost in the transition, he said. Kenwood Service Center East is at 829 Lynnhaven Pkwy--Suite 130,Virginia Beach, VA 23452; tel 757-340-1702.

* More changes to WM7D call sign database: Mark Downing, WM7D, reports his call sign database now is available at http://www.wm7d.net/fcc/callsign.html. The database now includes Canadian call sign information from Industry Canada. WM7D recently added search capability for US amateurs by name, city, state, and/or ZIP Code. For more information, e-mail wm7d@wm7d.net.--Mark Downing, WM7D

* KD4WUJ a repeat winner: For the second year running, country music singer Patty Loveless, KD4WUJ, was named top female vocalist during the annual Academy of Country Music awards April 23. Patty also was Country Music Association's female vocalist of the year in 1996.

* Update--RS-16 70-cm spurious signals: Spurious emissions on the 70-cm band from RS-16 have been confirmed by Pat Gowen, G3IOR, who says they show up when the 435.504-MHz beacon is active. Using stacked 13-element RHCP AZ/EL Yagis, Gowen was able to hear the spurious emissions reported earlier by Leo, UA3CR. The strongest was just S2, which Gowen estimated to be about 35 dB below the beacon. G3IOR said the spurious emissions show up as very rough, T2, auroral-like signals on 435.461, 435.478, 435.483, 435.491, 435.507, 435.516, 435.524, 435.538 and 435.544 MHz (these frequencies are approximate due to the rapid Doppler shift of the downlink signals).--SpaceNews

* MIT reunion set: The MIT Radio Society--operators of W1MX and W1XM and one of the oldest college radio societies in the world--celebrates with a

reunion May 5, 1997 at the club station in Walker Memorial. Festivities begin at 4 PM, and all past and present members are invited. The reunion also will serve to celebrate the installation of a new Moseley Pro 96-3 antenna for W1MX. For more information, contact Dennis Shapiro, W1UF, (MIT '55), 24 Essex Rd, Chestnut Hill, MA 02167; tel/fax 617-277-6886; e-mail ldennis@highway1.com.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

2104. Re: Vanity Call Question

Newsgroup: rec.radio.amateur.misc

From: teixeira <teixeira@ccnet.com>
Message-ID: <3369E6F6.E9@ccnet.com>
Source record: 199199

The FCC sends out Vanity Calls when they get around to it. I would guess 60 days would be about average. 6 months might not be unheard of. If there are errors on your application or call changes it would also slow things down because someone would have to go and check out the problems. Hope this helps.....

Don, W6IQ

2105. FS: UHF HT & Communications Receiver

Newsgroup: rec.radio.amateur.misc

Standard HX-240U, UHF 16 chnl/4 watt HT, 420-470 MHz, programmable,
all original accessories and boxes, software and field programming
instructions, digital display, simplex/duplex, hi/low power, scan,
CTCSS tones, drop-in-charger, spkr/mic, power cords, bottom covers,
extra alk battery pack, lighted LED, mobile mag mount ant, and manuals.
Excellent condition, $300.

Realistic DX-380 Portable Communications Receiver.
150 kHz-30 MHz AM and 88-108 MHz FM. Digital display.
Has local/dx and narrow/wide AM reception switches.
Stereo/mono FM switch. Also, hi/low tone and fast/slow
tune switches. AM external antenna, dc power, and headphone
jacks. Tunes by direct entry, up/down button, or rotary dial.
Original box and manual, like new, works great. $100

I will pay shipping via UPS ground.

Recent sells references available

>Does anybody know how long it takes to get a vanity call after an
>electronic submission of the 610V form?

>Thanks, Annette KK7GD
My observations are that currently the FCC is making a vanity "run" about once a month. They are running 10-15 days behind on processing vanity applications. So... depending on when you submit your application during the monthly cycle, you could get your vanity call issued in a couple of weeks or you could just miss the window and it will be 6-7 weeks. OR there could be something wrong with your application or no calls available and I have seen some of those take 6 months to be resolved. You need to check the FCC data base daily to keep on top of your vanity application.

Good Luck,
Jim - AA3O

All Motorola software is Licensed.
You must sign a license agreement with Motorola or face
criminal prosecution. And BOY do they prosecute!
Their attorneys are constantly finding software violators
and when they do they are neither kind nor merciful.

Suggestion: Just buy the software from them directly. 800-422-4210
The software may be expensive, but after all it comes
nowhere close to paying an attorney or legal fees.

BTW: I am NOT employed nor am I a representative of Motorola.

Don't dispair Alan. While the air does indeed have its share of jerks most people on the air are really pretty nice. Interestingly behavoir seems to be better on the higher non code bands than on some segments of HF. The nasty tone in the news groups more represents Usenet than amateur radio. There is something about the anonimity of the net that brings out the schoolyard bully in some folks.

Your comments bring to mind my thoughts the first time I read the news groups. I wondered why I would ever want to participate in the hobby but as time passed I discovered that the real anti-social morons seem spend all their time on the net because you never hear their callsigns on the air.

Well, honestly, ham radio has it's share of assholes (just like the general population of the world, I guess) but it seems that the malcontents and the doomsayers are the most vocal of the group, at least on the internet. (Interesting that one of the "biggest threats to amateur radio" as defined by many of the doomsayers also seems to be the medium of choice for communication by them) I for one find amateur radio to be an interesting and rewarding hobby. It is like everything else in life though, the more effort that you put into it, the more satisfaction you get out of it. I use my radio skills to help the National Weather Service as a volunteer storm spotter. I also volunteer my skills and my time with the American Red Cross. I find both volunteer pursuits to be rewarding. I also greatly enjoy communicating with old and new friends over the airwaves, both near and far. In short, I wouldn't trade this hobby for any other, in spite of being forced to put up with the occasional idiot on the airwaves.

> ...<SNIP>

Indeed, Alan. I am a relatively new ham. I too found CW to be quite intriguing, especially given that it is an excellent entry point when it comes to homebrewing your own TX and RX.

There are many, many pleasant hams on the air, both coders and no-coders. I have yet to have an unpleasant contact (I do use CW exclusively, where nastiness is less likely - the rigors of CW seem to make being a jerk harder). While I have heard the occasional nasty idiot and potty mouth on SSB phone (and on 2M FM), such elements are very much in the minority. Just turn the dial and go somewhere else if you are unlucky enough to encounter one.

I have designed/constructed my own CW TX and now use it. I have had nothing but pleasure from the hobby (except when I connected myself to the PSU of my TX while constructing it - ouch :-)).

Please don't let the negative comments one can see here put you off. Most of them seem to spend their time at the keyboards, thus keeping them off the air!

2118. Laptop use on code tests

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-02 00:00:00 UTC
From: Len Popyack <popyack@borg.com>
Message-ID: <01bc56a4$9b198ee0$492562ce@popyack>
Source record: 199263

We let folks use laptops if that is what they are used to using for code copy. Of course we watch them to be sure that the editor is the only program they are using. We also change our code tests all the time, so the test contents is a "one shot". The pass rate is really not affected, in our case. Our long term average pass rate on code tests is about 30 to 40%. Many people "waste" $6.25 by not being close to ready for the code test which they are trying for. We wish them all luck and do whatever we can to ease the tention of the code test. If using your most comfortable keyboard/laptop helps, then so be it.

> property.
>
> With an expanded cement base, the total height of the structure would be
> 169 feet.

Who wants a 169 ft tower in their neighborhood!
Who's being unreasonable.

We have a church up in Edmond Oklahoma that wants
to build a 200 ft cross. The city said no. The church
then got new council members elected, and will
probably get the vote they want.

Problem is, the tobbacco and strip bars will want to have
200 ft billboards as well.

If you don't want 169 ft towers all over your
neighborhood, best to nip this in the bud at the
get-go.

Steve

That's a matter of opinion. I'm sure we wouldn't have to look too far to
find some rights you find too sacred for us to be trampling all over.
Health and safety concerns should be the only qualifiers that bar most
things people want to do on their OWN land.

That ham's tower may be your only contact to the outside world in an
emergency- you sure you don't want it there?

Source record: 199272

Unfortunately, I resemble that remark. 25 years ago I got into Amateur Radio because the people I admired the most dabbled in it. I left it because the last thing a 13 year old on a new set of hormones wanted to do was operate a SPST switch in rapid succession to communicate.

I got back into it recently through the Tech NoCode avenue and had a pretty open mind about it. I primarily got back into the hobby so I could utilize 2 meter beacons in my High Power Rockets so I could find them again. After subscribing to the newsgroups, the first thing being addressed at the time was why half of the 2 meter band should go away with justification being all hams are slimy old white trash and the Commercial LEO's needed the band space. Next came the assault from the pro-coders pronouncing me lazy. I succumb under the attack, lowered my self to their level, and started to attack back. I was weak, I am sorry.

Do not get the wrong idea about Amateur Radio because of such attacks. Yes 80, 40, and 20 meter phone has become a cesspool of language. In my area many Hams are fleeing to the Upper Bands (6 meters and up) and I have held some very good QSO's on sideband with them. Really good people, the types that I remember being in Radio.

Dive in and ignore the H.F. and newsgroup stuff for now. Much like H.F. propagation, I believe its a 'phase' we are in.

This is the same GREED that fuels the money laundering "fight" and
anti-"Drug war" campaigns. IT's so bad now that if you pay cash for an
airline ticket the teller calls DEA (among others) to search you for
drig money(of course we know ALL money is tainted). Meanwhile
in most instances the teller gets a cut of whatever is found.

I feel like aplying for American Airlines. hihi

>not extend the VEC program into volunteer monitors working with FCC
>approval and local authorities. I'd support it. Has the ARRL suggested
>it?

The original post stated that ARRL had set out to UNDERMINE the FCC's enforcement action. I, of course, took issue with it. :-) I agree that we have not yet been effective in our efforts to step up FCC enforcement, but that is not from lack of trying.

Your citing of the VEC program is mixing apples and oranges a bit, but if you are referring to the liability protection extended to the VEs, the ARRL is close to obtaining agreement with the FCC to extend that same protection to our Amateur Auxiliary volunteers.

The Amateur Auxiliary operates under the wing of the Offical Observer program in the ARRL Field Organization. These volunteers develop cases, getting dates, names, details. They do this in concert with ARRL staff and our Washington, DC office. The ARRL then forwards their cases to the apprpopriate individuals within the FCC.

To date, we have organizationally resisted any involvement with local officials when it comes to enforcement of amateur rules. Federal pre-emption on amateur regulation is pretty clear. It has been enough of a challenge to ensure that the various parts of the FCC regulate Amateur Radio is a consistent fashion. I just cannot imagine the difficulty of trying to extend that same consitency across literally thousands of enforcment jurisdicitons.

The FCC cites lack of resources as the prime reason that they are not able to do more with enforcemnet. The ARRL has consistently been on

record as seeking more enforcement, and we have addressed this at every opportunity. Unfortunately, the relative lack of resources at the FCC is reality. They could, however, find the time to make a few examples, and they do from time to time. From there, many of these cases may need federal prosecution, where they compete with drug runners, building bombers and other major cases. Unfortunately, someone saying "diddlyblatz" on 3853 just doesn't get put very high on the list.

If anyone wants more info on the Amateur Auxiliary program, contact Jay Mabey, NU0X, jmabey@arrl.org, here at ARRL HQ. I have just given an overview here, a bit outside my element. :-)

2137. Re: What kind of people call themselves "hams?"

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-02 00:00:00 UTC
From: a.holloway@mail.utexas.edu
Message-ID: <5kcpv9$f8f$1@geraldo.cc.utexas.edu>
Source record: 199282

OK, everyone. Hams are helpful, thoughtful, and reasonable. Now a statistician might disparage my results, but I got nothing but support from everyone who answered my mildly inflammatory query. Thanks! And I'm chastened by putting too much credence in what I had heretofore read on these newsgroups. Newgroups are great in their way (tons of info, timely info), but there sure is a lot of chaff to separate! One more thing: There seems to be a direct correlation between those who listen and their thoughtful feedback. A result of good operating practice?

I hope to hear from you on the air,

Alan

A surplus of twisted minds? I agree, on news groups or even on the air
(on a few frequencies any way). I don't think it due to band
reductions. Probably has more to do with Altzhimers or bad hair days.
If you seek out opinions, you'll get them in spades. I think you have
found that those who squeek the loudest have the least usefull to say.

I believe the majority of hams are as level headed as the rest of the
populace, probably more so. Please seek out a club in your area,
or attend a ham coffey, brunch, whatever. This is a BIG hobby with
many facets. Don't form an opinion from only one source. Remember,
on a cleared disk (clear day) you can seek forever.

73, keep looking. Guy

Good Morning Alan -- some food for thought.

1. Every group and facet of life has its objectionable characters -- be in the workplace, meetings, church, community groups - et al. Why would you expect Ham radio to be any different??? In most cases I find that the bozos are in the way down minority. Don't you?? And one persons bozo is another's genius -- so someone said!

2. The news groups do have some raging arguments -- most of us ignore it all as it has been going on for months -- just another slice of life. Its a free country as they say -- more power to em for their opinions. Some stimulating posts to say the least.

3. Here in San Diego, out of town Hams are met with the utmost courtesy -- invitation to use the repeaters while in town, invitations to meetings, advice on attractions, street map directions, and even invitations for an eyeball or Ham Shack visit (Dxers are renowned for this).

New hams are given advice when asked for. We have over 900 members in our repeater club and you can ask from advice from plumbing to chevys to

spread spectrum modulation and find someone knowledgeable.

I could enumerate hundreds of overseas SOS that I have had that were outstanding -- where else can you learn of and talk with folks around the world and not leave the shelter of your own home??

The repeater groups are an excellent avenue to meet new folks with interests that are akin to yours. We have a sailors net, a hiking net, YL net, humor net, trivia net, packet net, Ham help net, ARES, EVAC, Morse Practice and many more here in the area.

Discussions on the repeaters and HF range from astronomy, aviation, dirigibles, photography, DX, ATV, home-brew and durn near everything else. -- Any thing strike your fancy so far??

Get back on the air -- give it a chance -- avoid your brand of bozo -- just like you do in the other avenues of life -- or do you??

Sincere Regards
Rod in San Diego

DIVISIONAL NEWS

Affiliated Clubs Reminder

Your conference starts at 0845 this coming Saturday, 10th May, at
Amateur Radio House, Parramatta.

If you have not sent your registration form, please drop it in the post
tomorrow.

--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW Dunedoo

(Bring along your updated club details for free inclusion on the VK2 clubs
page on the World Wide Web.)

WICEN NEWS

Events this month include the Hawkesbury Emergency Expo, run by Kevin
VK2CKD, over the 16th-18th May, and assistance is required; and an
Emergency Management course will be held at the Volunteer Emergency
Centre in Terrey Hills on the same weekend of 17-18th May, for which
Barry VK2AAB is the contact.

Next month sees the Tom Quilty Horse Enduro, run by the eponymous Dan
VK2GG on the 7th June; we hope to have further information in a later
broadcast.

The Colo Classic Endurance Ride is on the weekend of 12th-13th July, and
Blue Mountains WICEN has been asked to provide communications
support. This horse endurance ride is a 24 hour event, starting at midnight
on Friday 11th July, with an expected participation of 80 riders and their
horses. We participated in this event last year, and it proved successful
from both the organisers' and the operators' point of view. We need 13
operators to cover the checkpoints, with each checkpoint open for between

5 and 8 hours, and one operator with a 4WD vehicle would be appreciated. Why not make it a family weekend as there is an excellent camping area where the base station will be located next to the beautiful Colo River. A meal will be provided from the BBQ at the base when operators complete their checkpoint. For further information please contact Neil Fallshaw VK2XNF, at home on (047) 51-6449, at work on (02) 9342-1589, via packet radio as VK2XNF @ VK2TGB, or e-mail to neil_fallshaw@yes.optus.com.au

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

CQ HAM RADIO (JAPAN) MAGAZINE

We have received a letter from Frank VK2EKY, who tells us he is in a position to bring in copies of the Japanese Amateur magazine, CQ Ham Radio, and would like to hear from anyone also interested. The magazine, while mostly in Japanese, contains in its several hundred pages each issue, many useful technical articles and product advertisements. Would anyone interested please contact Frank via the Divisional Office

STOLEN EQUIPMENT

Stolen from St Clair on Sunday, 27th April was an Icom dual band FM transceiver, model IC3200, serial number 36901268. Identifying mark is an Amateur licence number engraved on the base. If you are offered this radio for sale, or if you have any information, please advise St Marys police.

-- Trevor Cook VK2EC

COMMUNICATIONS EXHIBITION.

Need to keep up with the development in the field of data and communications ? The 14 th Australian Telecommunications and Data Networking Exhibition - Atug '97 - will be held at Darling Harbour from Tuesday the 13 th to Thursday the 15 th May. It is a trade show and you have to be over 18 to attend.

-- Tim Mills VK2ZTM

SPACE NEWS

STS-83 WILL FLY AGAIN WITH SAREX ON BOARD

Word from NASA this week is that shuttle mission STS-83--cut short in early April because of a fuel cell problem aboard the spacecraft--will be reflown in July with the Shuttle Amateur Radio EXperiment--SAREX--aboard! The new mission will be dubbed STS-94. The space shuttle Columbia prematurely returned to Earth April 8 without making any of the scheduled QSOs with 18 schools around the world. STS-94 is slated for launch on July 1 for a 16-day mission.

Meanwhile, the Mir flight crew managed to restore one of two Elektron oxygen generators aboard the Russian space station. The three used equipment shipped to Mir April 8 aboard a Progress resupply rocket. With the Elektron electrolysis system at least partially back in operation and the Mir's primary carbon dioxide scrubber also operational once more, the air aboard the Mir is healthier than it has been in weeks. Because the system is not producing oxygen at a rate sufficient for three crew members, however, the crew is supplementing the Mir's atmosphere with gaseous oxygen. Mir crew has, for the time being, given up efforts to track down an elusive cooling system leak that's allowing ethylene glycol coolant to leak into the atmosphere of one spacecraft module.

The 11-year-old Mir space station eventually will be replaced by the International Space Station--a cooperative venture between Russia and the US.

--ARRL Letter, volume 16, no 17, dated 25th April

DX NEWS

SCARBOROUGH REEF - The 1997 BS7H DXpedition has begun. Most areas of the world have reported strong signals, while propagation to central and eastern North America has suffered from a moderate increase in geomagnetic activity. The team has made quite a number of QSOs so far.

GUINEA - 3XY3A will be active from Conakry until June 15. He can usually be found on 14020 and 14130 kHz. He has also been reported on 21236 kHz between 1730 and 1830z.

SRI LANKA - 4S7BRG is active until May 30 and is working RTTY on the weekends.

MALDIVES - 8Q7MZ and 8Q7BZ are active from Rashdu Atoll, Kuramati Island, until May 14. Activity is expected on all bands, with preference given to the IOTA frequency of 14260 kHz.

NEPAL - 9N1WU will be active until Tuesday. He will be QRV on 80 to 10 meters, SSB only. 9N1SM will be active in mid May on 40 and 20 meters.

TAIWAN - BV3/DL5AUJ will be active from the QTH of Hans, BV3/DL4AMJ, from May 5 to 13. Both will participate in the MIR Contest as BV0THU.

FRANZ JOSEF LAND - R1FJV will be active from here for the rest of 1997. He can be found on 40 to 10 meters, using mainly CW.

SEYCHELLES - S79MAD will be active from here for four months. Activities will include RTTY on the newer bands.

FALKLAND ISLANDS - VP8CEH will be active until October this year.

LORD HOWE ISLAND - VK9EHH will be active until Tuesday. Look for him on 14260 and 21300 kHz.

--ARRL DX Bulletin no. 20, dated 1 May 1997

CLUB NEWS

Another Reminder to Affiliated Clubs:

Your conference starts at 0845 this coming Saturday, 10th May, at Amateur Radio House, Parramatta.

If you have not sent your registration form, please drop it in the post tomorrow.

--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW Dunedoo

(Bring along your updated club details for free inclusion on the VK2 clubs page on the World Wide Web.)

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton. Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

Upgrade your morse. Classes on Thursday nights.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events

31st of May. Lecture on Microwaves and Plumbing By Dave VK2GIO.

--The Publicity officer Michael VK2E

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE ON THE THIRD TUESDAY IN MAY, THAT'S MAY 20, AT AMATEUR RADIO HOUSE, PARRAMATTA. THE MEETING WILL BE DEVOTED TO THE

CONSTRUCTION OF TEST EQUIPMENT AND - JUST AS IMPORTANT - HOW TO USE IT. THE PRESENTATION WILL BE THAT WELL KNOWN HOMEBREWER, VK2ARS.

THIS MONTH'S AMATEUR RADIO MAGAZINE CARRIES THE RESULTS OF THE 1996/97 ROSS HULL VHF CONTEST. WHILE THE WINNER WAS VK2FZ/4, THE SECOND HIGHEST SCORE CAME- FROM OUR VERY OWN GORDON MCDONALD, VK2ZAB. GORDON COMMENTS THAT WELL OVER 100 DIFFERENT STATIONS WERE AVAILABLE ON THE BANDS ABOVE 144 MHZ DURING THE CONTEST PERIOD,

AFTER SOME DISCUSSION THE GROUP HAS DECIDED TO MOVE ITS SUNDAY MORNING NET TO A REPEATER. THIS MAY SEEM AT ODDS WITH THE GROUP'S OBJECTS, SINCE THE REASON FOR THE NET IS TO PROVIDE A POINT OF CONTACT BETWEEN FM AND NON-FM OPERATORS. THE USE OF A REPEATER WILL MAKE THE NET MUCH MORE ACCESSIBLE TO THE FM FRATERNITY.

ACCORDINGLY WE WILL SHORTLY MOVE THE NET TO A TWO METRE REPEATER, TO BE ADVISED IN A FUTURE BROADCAST. UNTIL THEN THE NET WILL REMAIN ON 146.55 MHZ SIMPLEX.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

RIVERINA FIELD DAY

The Wagga Amateur Rado Club invites you to it's Riverina Field Day to be held in Wagga Wagga over the weekend of 9 & 10 August 1997.

The weekend kicks off with the Official Dinner and guest speakers on Saturday evening. Sunday activities include trade displays, foxhunts, including a talk-in hunt, a 2m scramble, seminars and of course the flea market.

For more information try the Tuesday Wagga Awards Net on 3.605 Mhz and talk to Paul VK2KVY or phone John VK2YW on 069 251720 after hours or Don VK2MDB 069 311683 after hours.

--John Eyles VK2YW, President WARC inc.

WESTLAKES AMATEUR RADIO CLUB

WESTLAKES AMATEUR RADIO CLUB ADVISES THAT IT WILL HOLD A '24 HOUR 160 METRE MARATHON' ON 17 MAY TO CELEBRATE ITU DAY. THE CLUB STATION WILL USE BOTH ITS CALL SIGNS, VK2ZL AND VK2ATZ AND WILL BE ACTIVE ON SSB AND CW.

TWO SPECIAL QSL CARDS ARE ON OFFER TO ALL STATIONS WHICH MAKE CONTACT. ONE CARD IS FOR SSB, THE OTHER FOR

CW, AND WHEN PLACED TOGETHER, THEY MAKE A NICE SET. THE CARDS ARE ALSO AVAILABLE TO SHORT-WAVE LISTENERS WHO SEND SIGNAL REPORTS TO THE WESTLAKES CLUB AT POST OFFICE BOX 1 TERALBA 2284.

THE FREQUENCY ON WHICH TO LISTEN IS 1822 kHz PLUS OR MINUS FOR QRM AND EITHER VK2ZL OR VK2ATZ WILL CALL ON THE HOUR, FOR 24 HOURS.

THE DATE AGAIN FOR THE WESTLAKES '24 - HOUR 160 METRE MARATHON' IS ITU DAY, 17 MAY STARTING AT 0000 UTC.

--That item was submitted by Greg VK2CW

HORNSBY & DISTRICT ARC. INC.

The Hornsby & District Amateur Radio Club Inc. holds meetings on the second and fourth Tuesday of each month, with the exception of January, of which a night is set aside for our open night, so the public may join us, and take look at what Amateur Radio is about, and see just some of the aspects of the hobby that are available to those with a licence.

When and where do these meetings take place, at 8:00pm. in the Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station.)

At the formal meeting on the 22-4-1997 present at that meeting wag Jo Harris VK2KAA, along with the bronze repilica of the monument of Mercury, situated in Wahroonga, which was the suburb that the first direct wireless message was received, from the UK to Australia in 1918.

This repilica monument is to be set up at the old Marconi Transmitting Station in Wales at a ceremony to be held in July this year. Many of our member contributed towards the cost to help Jo.

Training Classes.
Please ring Tony VK2BTL on 9487 3383.

The Club conducts, a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanner or receiver to 147.250.

Should you wish to know more about the Club, or its activities, please write to :- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer.

GLADESVILLE NEWS.

The May monthly meeting of the Gladesville Amateur Radio Club will be held on Monday evening the 12 th at the usual Lane Cove venue. The Newsletter is being prepared this weekend and will be in the post early in the week.

There has been a recent increase in the inquiry level for the Gladesville lecture tapes which will hopefully lead to core business for the exam service. Inquiries to Gladesville should be directed by mail to P.O. Box 48 Gladesville 2111 or by Telephone to (02) 9427 0530 [repeat].

--73 Keith VK2ZZO President / TV Co-ordinator

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

The April meeting of the club where Snow VK2IFS & Kevin VK2TKB spoke on different packet operating programs was well received by the members and visitors including a group from the Blue Mountains Club.

The next meeting of the club will be held on Wednesday week the 14th of May, at the usual location, the Scout camp on Cambridge Ave Glenfield. The lecture will be a practical demonstration on designing a printed circuit board from a distributed circuit diagram using Easy Tracks. The lecture will he given by Brian VK2TRS and is a follow up from the Protel lecture he gave last year.

The Club advises that our 146.625 Mhz repeater is temporarily off air due to an enforced change of location. The proposed new location will hopefully be free of the pager intermods. which plauged us at the Mt Razorback site. As soon as the repeater has been reinstalled we shall advise all amateurs via this broadcast.

-Submitted for the Liverpool & District Amateur Radio Club by Garry VK2TSR

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD SPECIAL ON THE 3RD SUNDAY OF THE MONTH, THAT IS MAY THE 18TH. AT 109 WIGRAM ST. PARRAMATTA 1.00 PM

A TECHNICAL DISCUSSION WILL BE ATV ON THE INTERNET BY CADE VX2XXA

NOTICE TO ALL MEMBERS, TO THOSE WHO MISSED OUT ON THE AATC CLUB DISC AND THE SPECIAL DISC, SOME WILL BE AVAILABLE FOR THIS MEETING AS WELL, BRING YOUR DOLLAR WITH YOU.

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE INTERESTED IN AMATEUR OR SATELLITE TELEVISION.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

Jason -- some more info on FM (for hams) below 30MHz -- from the ARRL
Exam Questions at URL:
http://www.arrl.org/arrlvec/general.html

```
-------
G8B05 (C)
Why isn't frequency modulated (FM) phone used below 29.5 MHz?
A. The transmitter efficiency for this mode is low
B. Harmonics could not be attenuated to practical levels
C. The bandwidth would exceed FCC limits
D. The frequency stability would not be adequate

The (C) in parenthesis is the right answer
--
As far as I know Ham FM is limited to:

29.51-29.7 FM
29.52-29.58 Repeater inputs
29.6 FM Calling frequency
29.62-29.68 Repeater outputs

As for other services below 30Mhz that use FM -- I am not aware of any.
Try rec.radio.shortwave for that one.

If you'd taken the time to read what I was responding to, it had
nothing to do with crossposting. Somebody was trying to drum up
support for people to complain to Burt's ISP to get his access pulled.
The crossposting MAY have been part of the issue, but it was clearly
an attempt to censor Burt because the Net-Nazi doesn't like WHAT Burt
says, not where he says it.

Oh, come on, Bill! I think prospective hams should demonstrate an ability to make a coherer/decoherer, a sal ammonical wet rectifier, and a rotary spark-ga transmitter. Do away with those silly solid-state theory questions on the exams and test for important knowledge, like Type 57 plate characteristics and self-rectification. Don't forget a section on the pghlogiston theory of heat transfer.

We must keep the hobby pure!

Well I don't know about everyone but I wouldn't mind that tall a tower near me.
If I lived close enough I would ask to put a antenna of my own on it.

Also unless he lives near enough to a airport he has the right to put up to a
200ft tower without prior FCC or FAA notification

2147. 6 meter web page - updated

Yes, businesses are *forbidden* to operate in that band, but in over two years on gmrs I have heard ONLY businesses on that band. We all know the FCC has given up its enforcement responsibilities, anyway. You would be inconveniencing NOBODY. I've loaned my radiios out to my brother to use for his contracting business, and I still sleep nights. The band is, in fact, ideal for it since the signals get about a 15 mile range with the use of a repeater.

As Jeff says, had you taken the time to read the original post and
my follow up, you'd find that what Jeff says is right on (not that
we usually agree on much!) The original post had *NOTHING* to do
with amateur radio, yet was cross-posted to two different amateur
radio newsgroups. I also doubt that the incident would cause
poor Burt to lose his Internet access unless he has a tendency
to regularly violate his usage agreement with his ISP. Next time
read what was being followed up instead of jumping to conclusions
of censorship. Or are you one of the malcontents that hangs
out on 14.313 or 3.852 where rules and orderly conduct are a
rare occasion instead of the norm?

73,
Todd

If your friend was able to pass the 5 wpm, then a waver may be possible based upon a learning disability. I do not mean that as a derogatory statement against your friend or any others that have tried and tried to obtain the 13 wpm. It is a foreign language and to some, learning a foreign language is an impossibility.

>the ARRL is close to obtaining agreement with the FCC to extend that
>same protection to our Amateur Auxiliary volunteers.

I'm just a tad concerned about that, unless a way can be found to hold
the AA to the same professional standards required of FCC employees.
The OO program in the past has had some "brownshirt" tendencies
that would have been troublesome if backed by official sanctions.
Apparently the AA is to have access to those official sanctions in a
relatively unchecked manner. Without the check of the threat of
lawsuits, there is considerable room for abuse. I'm not convinced
that the goodwill of an FCC administrative law judge is sufficient
check on the potential for abuse. He has no access to independent
corroboration of the charges brought by an AA.

>The FCC cites lack of resources as the prime reason that they are not
>able to do more with enforcemnet. The ARRL has consistently been on
>record as seeking more enforcement, and we have addressed this at every
>opportunity. Unfortunately, the relative lack of resources at the FCC is

>federal prosecution, where they compete with drug runners, building
>bombers and other major cases. Unfortunately, someone saying
>"diddlyblatz" on 3853 just doesn't get put very high on the list.

That's unfortunately true. Even when the FCC issues an administrative
sanction, there is little it can do if the scofflaw ignores it. The FCC must go
to a federal prosecutor to have real teeth applied. And those folks have
their plates full of more important stuff too. This wouldn't change if AAs
get the power to bring charges. But to the honest amateur against whom
an AA brought malicous charges, it could be real trouble since he'd have
to hire a lawyer to fight the *Federal Government* to clear his name.
Meanwhile the AA would hide behind federal protection from suit. That's
a situation just asking to be abused.

I think that giving AAs the power which has been suggested without at the
same time holding them up to the threat of civil and criminal penalties for
abusing that power would be a disaster of much larger proportions than

putting up with the relatively few foul mouthed amateurs on our bands.

I think that a much better alternative would be to make it worth the FCC's while to increase enforcement. One way to do that would be to charge a license fee to amateurs which must be, by law, expended for enforcement. This would require an act of Congress, but I don't see any major problems there. If the license fee were set at $100 a year, that would bring $70,000,000 to the FCC for use in amateur rules enforcement. I expect that would get results.

Now the question every amateur must ask himself is, "Is it worth $100 a year to me to get a few foul mouthed drunks off of HF?" Heck, with that kind of money, the FCC might even call a bunch of Extras in for re-testing just to make sure they really are legitimate. They might even be motivated to enforce 97.313(a) during the next Dx contest. Heh, heh. That'd be worth a hundred bucks to me.

How about a medical waiver? Did you tell him that over 95% of the US
amateur spectrum is available via a code-free license?

I wanted to become a commercial airline pilot but couldn't pass the
FAA eye exam, so I chose another career. Maybe your friend should also
realize his limitations (especially after 20 years) and try persuing
another field of interest.

Probably his non-conforming use is grandfathered. That's pretty common.
His competitors probably aren't happy about that, but that's what they get
for being johnny come lately to the industry.

As for his neighbors, they knew the tower was there when they moved in.
I have no sympathy for them whatsoever. It's like folks who buy a house
next to a pig farm and then complain about the smell, or who buy a house off
the end of an airport runway and then complain about the noise. They should
have known the situation when they made the decision to purchase. IMHO
they have no right to complain now.

I've been lurking here as I have only just started studying for a
license, and the code is obviously controversial, however I haven't
found a post yet explaining w-h-y it is a requirement. It seems
there must be more of a reason than just "because". The analogies
offered seem a bit odd also ie., bad eyesight kept me from flying
so if you can't learn the code find a different hobby. (huh?)
If it is only an arbritrary requirement then why not require
fluency in French and the ability to do 200 push-ups?

Signed, a no code sorry ass loser for now <vbg>

DX Antenna System For Sale

Antenna system consists of:

1. 80' motorized aluminum crank up tower. This is an extreme duty

two section triangular tower. Bottom section is 36" per side at

the base, and 30" at the top (48'). The top section is 24" per

side and is 32' long. The vertical legs are 2" heavy wall military

spec. aluminum pipe, and the cross ties are solid 1/2" aluminum. All

hardware (nuts, bolts, pins, rollers, etc.) are stainless steel.

This is a stand alone tower (no guys) and is motorized with an

electric winch. Total weight is approx. 490 lbs. Original cost was

6,100.00 in '92. It remains in perfect condition. Cranked down height

is 48'. The base consists of three 2" X 6'6" heavy wall stainless steel

pipes which are inbedded into a 6' cube of reinforced concrete. They

protrude 6" out of the ground, and have stainless mounting plates

welded to them. This part of the tower will have to be refabricated

at a cost of probably around $100. Mast is 12' of 1/4" wall 2 1/2"

Aluminum (cost $90) with a 2 1/2" thrust bearing (cost $80).

2. KLM KTX34A tri-band beam 3 years old (had a mosely pro67b up

for year and a half, but didnt like the performance.) This is a

big antenna, but it's a pileup killer.

3. Cushcraft 2 element 40 meter beam...2 1/2 years old. Have

226 contries confirmed on 40 since I put it up.

4. Yaesu G-1000SDX variable speed rotor with 12' of heavy wall

aluminum mast.

5. Cushcraft 13 element 2 meter beam on side mounted seperate rotor

at top of tower...2 years old.

Since putting this antenna system up in various stages, it withstood

perfectly hurricane Andrew...(That is what it was designed to do). As

far as performance, it took me 2 1/2 years to work 5 band DXCC (Plaque

dated March 27, 1995,) with 308 total confirmed, with 226 on 40 meters.

I am forced to sell this system which I had planned to keep for the rest

of my life, as I am being transferred to Florida. It's just too much

trouble to move it all, and go through setting it all back up. However,

I'm not desperate...I'll store it if I have to.

Selling price is $4,800 U.S. Dollars and I'll take it down. I may split

part of the freight in the eastern U.S.A. If you have a jpeg file

viewer, I attached 2 small Pix.

2159. FT-8000 Help!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-03 00:00:00 UTC
From: Gary Baker <gbaker@pacifier.com>
Message-ID: <336C009E.60CC@pacifier.com>
Source record: 199154

Hi,
Name is Gary,
I have an ft-8000 that I have been running mobile and I have a problem receiving engine noise. It is not the alternator type wine but ignition noise. How do I get rid of it?
Does anyone else experience this type of problem?
A friend of mine has the same problem with his radio also, he is running the same setup in an older rig and still hears the ignition noise. We get good signal reports but to receive is a problem if signal is weak.
Any help would be appreciated!

I have for sale a station consisting of:
1.)TS-430s in good cond, with mike (mc-48), ssb narrow, fm board and manual.
2.)Pyramid 20A metered power supply
3.)Compaq Contura 4/25 notebook computer with 8MB ram, 14.4 modem, ethernet, mouse, trackball, battery and charger.
4.)Baypac TNC.
Sell all for 950$, I ship UPS. Mail me if you are interested. Thank you for reading this.
Loren

Why should he get a waiver? There is absolutely nothing wrong
with him! The wrongness is in the Morse code testing requirement.

Hi Tom, welcome to r.r.a.policy. If Morse code testing were eliminated, the hobby would be populated by RF electronic engineers and that would make all the electronically ignorant hams miserable. Morse code is their only claim to fame. If Morse code testing were eliminated, they would be the ones labeled "not real hams" and that feeling is eating them alive.

But Jeff, Morse code tests have been passed by all those idiots on SSB.
The only reason it doesn't occur on CW has nothing to do with nicer
people being on CW. CW just doesn't lend itself to right-brained
emotional outbursts like speech-based modes do. It is well known that
dirty words are not processed through the left-brain speech centers.

Neither one actually. What you want to determine is the 12 db or 20 db
quieting threshold. You can do that with an unmodulated signal generator
and a VU meter on the receiver audio output. Just set the audio output
level with no signal (squelch open) to 0 db VU and then insert an unmodulated
carrier with the signal generator. Increase the signal from the generator
until the VU meter drops to -12 db or -20 db and note the output level of
the generator. Typical numbers for amateur equipment is in the range
of 0.2 uV to 0.5 uV for 12 db quieting.

2171. Ham-M rotator getting s - l - o - w ...

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-03 00:00:00 UTC
From: John Nicholson <k7fd@netbridge.net>
Message-ID: <01bc5753$c2cdcaa0$83e56ac6@default>
Source record: 199210

Any suggestions? My Ham-M is starting to turn slower and slower (at least the indicator
looks slow...when I look up at the quad it seems to be going relatively well)..but I think
there is trouble brewing. The indicator on the controller is rock steady, no erratic movement.
Could it be there is a problem with the circuitry in the controller...and not with the
rotator itself? I would much rather have to replace something at this end if I have a choice.
Has anyone run into this before and if so, what did you find out?

Thanks!

John K7FD

Hello everyone:

Apologies for using the APRS SIG list for this purpose, but I am selling
my 386 computer (the very one I'm using right now) in order to upgrade to
a better (not to mention more modern) system.

It has the following:

* 40 Megabyte scuzzy HD (not yet installed) with matching motherboard
* 14.4 USRobotics external modem with cable
* 2 floppy drives (5 1/4")

Will sell as PACKAGE DEAL ONLY!!! Asking price: $700

If interested, email me at patcook@dimensional.com

I look forward to your reply....

Patrick Cook
patcook@dimensional.com
Denver, Colorado

P.S.: SPAMMERS AND OTHER USENET LOSERS NEED NOT REPLY!!!

Hey Woody,

News Flash this guy is not a ham thus doesn't fall under PRB-1
"protection" he is running a commercial tower operation. That would be
a commercial operation in a residential zone. I'm sure I like New
Jersey even less than you do but the town has a point on this one.
Read what Bill Sohl had to say. But, you say, the newspaper said he was
a ham the media get the story wrong gosh I never saw this happen
before.

>AMEN !!!

Hi Hank and Glen - You both misunderstand the situation. With well over
20 kilogroups on Usenet, any topic you can possibly cook up would be on-topic
somewhere. Antenna discussions are discouraged on .misc becaue there is
a NG (r.r.a.antenna) devoted to them; home-building discussions are dis-
couraged on .misc because there is a NG devoted to them. When we ask
folks to move off .misc it is not because we're tryng to silence or censor
them; rather, we're asking them to move to a more appropriate NG. If they
don't comply then it's appropriate to gently request their provider to
ask the user to abide by the charter.

If all 200,000+ of us decided to ignore the charter and post off-topic
remarks, this NG would be unreadable. Is that type of anarchy what you
truly desire? Would you quietly sit by and kill-file 200,000+ posters?

(One's lack of disipline on a NG can tell us quite a bit about that person.)

ZUT,
Jeff KH2PZ / KH6

Yes....poor Carl.....and after spending all that time and
effort......still misses the point.

If a person doesn't want to learn code, fine. Don't learn
it. But don't whine about it and use excuses like "the
state of radio today" or some such nonsense.

With all the tools available today to learn the code with,
it isn't that hard anyway.

Mike L. ke4hlu (another 5wp tech....looking forward to passing the

May 3, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.
For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #214 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 9-May:
-
1. ARRL Asks FCC to Postpone Increase in Vanity Call Sign Fee
2. Hams Remain on Duty in Upper Midwest, the Worst May Be Over
3. Ham-astronaut Resigns from NASA, Will Head Pittsburgh Museum
4. RAC Holds Annual Meeting in Ottawa, Raises Member Dues
5. Wisconsin Hams on Alert for Expected Power Outages
6. "The RAIN Dial-up" from Chicago
7. Weekly Propagation Forecast
8. "Ancient Amateur Archives" with Bill Continelli, W2XOY
9. Special Event Station Calendar
10. Sister Alverna, WA0SGJ, Retires from Courage Handi-Hams
11. "This Week" Uplink to be Pre-empted May 17th
12. Patty Loveless, KD4WUJ, Wins Country Music Award
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
```

amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

>Jeffy,
>Nice spam job, do you do this alot, or just when you loose an argument?

Again, tell me what NG you're on and I'll trim the headers you initially placed at the top when you started calling Burt names. I count 6 NGs you posted your Burt-attacks to. How am I supposed to trim if I don't know where you're at? Come out of the NG closet! I'm currently on .misc.

>You threaten some guy on .swap

He sold me a bum modem - I gave him a choice to refund my money or face postal fraud. What did you interpret as a threat? What would you have done?

>and when you get called on it

No one took exception except you.

>you raise the all mighty news group charter.

Yep. No followups should be done on .swap - they're supposed to go via email - that's why I redirected my followup to you over to .misc. You apologized last week but now you've reversed yourself.

>Face it Jeff you're just a control freak

Hey, that's not nice! Don't be so mean-spirited, Jerry. At least I'm not threatening to go to go to Burt's net provider as your are.

>a nebulous existence on the net but be my guest. However there
>are people who, unlike your poor students, don't have to take your crap
>and won't.

Why are you so being so mean-spirited, Jerry? Go have a beer and watch the sunset. Life's too short to be hostile.

So what's your latest project? Building any radio-related gear? I just bought a WRL Globe Scout transmitter (for $25!) - I can't wait to string a 160m wire and see what I can do on that band from out here in the middle of the Pacific.

Have a fun weekend,
Jeff KH2PZ

From building one himself? That would be a great project. Browse through
the ham radio books in your library - you're bound to come up with at
least one construction article for an amp. But remember that power is
no substitute for an efficient antenna system.

2185. HIGH POWER TRANSMITTING TUBES FOR SALE

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-03 00:00:00 UTC
From: norman <norsan@bright.net>
Message-ID: <5kfdgp$t7a@cletus.bright.net>
Source record: 199224

Eimac type YC156. This is the same basic tube as a 4CX5000. It is a high mu triode with beam forming cathode and grid that provides the gain of a tetrode. Power gain is 15 db.It was designed for the medical industry and has a rating of 6500 volts at 4 amps (67 amps peak in pulse mode !) This tube will operate with full output to 110 Mc. No socket is necessary for this tube, it will mount in a 3 1/2 inch diameter clear hole, and the grid ring will bolt to the chassis. Height overall is 8". I have all data sheets. Tubes are used but emission is guaranteed for full output. $325 each.

>state of radio today" or some such nonsense.

>With all the tools available today to learn the code with,
> it isn't that hard anyway.

Mike, you DON'T get it. We are not whining, we are making
the effort to eliminate code testing. The question is WHY
should anyone now be orced to learn morse code? That is
the issue. Morse code only has value an an entertainment
mode for personal use...and as such has no reason to be
a requirment.

There's no safety reason for morse, no technical reasons
at all. Morse is not used in any manner that suggests any
need for all HF licnesees o know morse.

Morse should be strictly an optional choice to learn and
use.

Pretty much any HF ham rig with an FM option. Kenwood, Icom etc....
Try your local hamfests...probably find a good used rig for small $$$$.
Also I believe the IC706 will do lowband FM?
```

2193. question about dual band antennas, duplexers and power amps.

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-03 00:00:00 UTC
From: wejones@megalink.NET
Message-ID: <199705031753.NAA18910@megalink.net>
Source record: 199232

I am using a Yaesu 736, and currently have separate 2M and 440 antennas, and have a 160W amp on the 2M side. I was considering simplifying my antenna situation by switching to a dual band base station type antenna,(such as a Diamond or Comet, etc), but started wondering about the implications of putting the 160W amp on the 2M side of the duplexer, ie will one of those duplexers that are supplied with the radios be able to stand up to the extra power. The first concern is whether the isolation (60db) in the duplexers is adequate to protect the GaAsFET preamp in the external amp, assuming that the RF sensing switch does not employ (which I would hope it wouldn't so as to be able to work full duplex). Also, I have been having a hard time understanding the ratings of the duplexers. One duplexer I have just says 250W on 2M and 400W on 430, but the other duplexer gives similar ratings, but lables them "PEP", and has another set of ratings (ie 150W on 2M and 100W on 430) that it lables "CW {ICAS}", which I assume means being for intermitant duty.
I ASSUME that the 250/400W PEP ratings are a worst case rating, and the CW(ICAS) ratings are for intermitant duty, and that FM ratings would be considerably less. IE, I assume that these duplexers I have cannot hold up to FM use at 160W.
Is this correct? Can I assume that the duplexer that just says 250W/400W is also a PEP rating, or is it possible that it is an FM or an intermitant duty rating (it physically looks like the other duplexer, ie a little 1"x2"x.5" box with 3 coax pigtails coming out). If the former, it seems like mis-labling. Or, are these ratings so conservative that normal FM use (ie short winded qso's) would be considered as even less than intermitant duty?
Has anyone used a 160W 2M amp with a duplexer? If so what brand/ratings, and how has it worked?
TIA

Just one question: when you started driving and somebody cut you off
and flipped you one to boot did you give up driving and lobby to have
the roads torn up and planted with alfalfa?

Yes, there are jerks in amateur radio. Any time you get a group of
over half a million people together a few of them will sneak in.
Perhaps it would make more sense to lobby the FCC to enforce the regs.
In the meantime there's a whole lotta good people out there to meet.

BTW, this didn't belong on rec.radio.swap so I've moved it to r.r.a.m.

73,
Mike, KK6GM

If you work for a corporation and develop software or other intelectual property on company time, the results belong to the corporation. They are paying you for your time and deserve the results of your work. Think of it as working in an auto plant. Since you installed the windshield, does that mean you get to take the car home with you?

If you wish to keep the benefits of your work, then you must produce it independently without the support and resources of the corporation.

Peter Gottlieb <peter_gottlieb@msn.com> wrote:

I think both sides will agree that the present written tests are trivial
and do not prove that any of us know RF electronics. I have heard the
most stupid questions from extras over on r.r.a.a. Would you be willing
to allow substitution of a EE degree for the 13wpm Morse code test? If not,
do you believe Morse code skill is more important than a EE degree?

Doesn't it seem a little unfair to you that CBers are allowed HF privileges without passing a Morse code test? That gives CBers more HF privileges than techs.

I said in my posting if what I was saying didn't describe you, then I was not talking about you. Wonder why you responded?

unfortunately most of my experiences is from the motor sticking. Usually after a period of non-use. If you have a thrust bearing and feel adventurous you can climb up with a can of WD-40 and hose down all the working parts. Just for grins you might also use a watch to time the stop -to-stop time it takes to make a rotation, that way you can check it in a month or two and see if it slows down more. Best thing for rotors is frequent use, in my opinion.

[Subject: Re: What is that date?]
[USENET: rec.radio.amateur.misc]
[Date: 1997-Apr-27 15:50:50 UT (Sunday) {1997-04-27 15:50:50 +0000}]

The following proposal has been circulated widely in the various RSGB committees, and to ARRL, IARU and several other places in the last year.

It appears in full in the current issue of DUBUS magazine (1997-Q1).

It is also available on Internet at:
http://www.aegis1.demon.co.uk/y2k.htm
ftp://ftp.funet.fi/pub/ham/misc/year2000.zip

DOCUMENT TITLE: A Common Date-Time Standard for Amateur Radio - A Proposal.
AUTHOR: Ian Galpin, G1SMD.
LAST REVISED: 1996-Jul-28.
FORMATTING: 78 Characters per line + <cr> + <lf>.
FILE NAME: Y2KHAM.TXT
==

A Common Date-Time Standard for Amateur Radio:

Proposal: * ~ #
--------- See Notes !
1. That the provisions of the:
- 'full basic' * and
- 'full extended' * formats
within the International Standard ISO 8601 ~, for representation of:
- Calendar Date in the Gregorian Calendar #, and for
- Date expressed as Ordinal Day of Year #, and for
- Time of Day expressed in 24-hour format
be adopted as defacto standards for all facets of the Amateur Radio hobby.
2. That an unofficial variant to the ISO standard, that allows the month to be written as the common 3-letter English abbreviation be included within this proposal, when a Calendar Date is intended for human reading.
3. That the UTC time scale be used whenever possible in Date and Time representations.

Scope:

The usage of these formats can apply to each of the following:
- The internal workings of Computer Programs.
- Computer Printouts (Satellite Tracking, Log Books, Packet Radio,

Contest Scoring, etc).
- Computer Screens.
- Data Storage.
- Data Interchange (on Packet Radio: both within the headers, and within typed messages; Log Book Files, Contest Log Files, Satellite Pass Data, etc).
- QSL cards.
- Membership Cards, Certificates, Invoices, Receipts, Magazine Issue Dates.
- Any other computer, or paper, based documentation, data, or correspondence.

Benefits:

- The ISO format completely avoids the American / British date format ambiguity.
- Data and programs become internationally portable, with no possibility of misinterpretation.
- The usage of the ISO format for the internal workings of computer programs usually ensures more compact code, and therefore faster operation.
- The logical left to right Year-Month-Day Hour:Minute:Second precedence makes computer programming easier. Certain date-related algorithms become trivial when using this style.
- Using the ISO format and 4-digit years should ensure that software transitions correctly from 1999-12-31 to 2000-01-01 (programs using only a 2-digit year may produce wrong results).
- Having only one date format allowed on computer program screens and printouts means that the program works the same for everyone everywhere in the world; only one program version is required for all markets.
- It removes the need for a whole load of 'Date Format' menu options, making programs smaller, and easier to write. It reduces the scope for making mistakes.
- Using a fixed format for dates and times makes looking down lists of dates and times easier.

Background:

Dates have caused many problems to computer programmers. The tradition in the past has been to use the dd/mm/yy form in Britain, and the mm/dd/yy form in America. The problem is that programs from abroad may 'work backwards' to how the user expected them to. In addition, messages written abroad from the eventual reader, may be misunderstood: e.g. 1/12/96 is read in Britain as 1st December, but if written by an American it is likely that January 12th was intended. The ISO Year-Month-Day format solves this problem.

Where only a 2-digit year is used within a computer program, there may be problems when year '99' (1999) rolls over to '00' (2000); in addition to the problem that a date like 31/06/96 may be 1896, 1996, or 2096!

The full ISO format (with 4-digit years) removes all of these problems at the same time.

The Standard was originally adopted in Britain as BS 4760:1971, and as BS 5249:1976 and later superseded by BS 7151:1989. Latterly, and as a result of European harmonisation, BS 7151 has been renumbered as BS EN 28601, so

implementing the European Standard EN 28601, which is identically worded to the ISO 8601 Standard. International Standard ISO 8601 replaced the ISO 2014, ISO 2015, ISO 2711, ISO 3307 and ISO 4031 Standards which have all been withdrawn; but which you may see referred to in some older documentation.

The ISO 8601 Standard has now been adopted in most countries of the world.

Summary of the ISO Standard:

Gregorian Calendar Date:

- Use 4-digit years when storing or printing dates.
- Use the order Year-Month-Day i.e. biggest first (e.g. 1999-12-31).
- Use Leading Zeroes on digits 00 - 09 for the Month and for the Day number.
- Use the '-' separator. Do not use the '/' separator, this has a different meaning within the standard.

Ordinal Day of Year ('Ordinal Date'):

- Use 4-digit years when storing or printing dates.
- Use the order Year-DayNumber.
- DayNumber is a 3-digit Number from 001 to 365 (366 in a leap-year).
- Use the '-' separator between the year and the Day Number (e.g. 1996-250).

Time of Day:

- Use the 24-hour format.
- Use the order Hours:Minutes:Seconds i.e. biggest first.
- Use Leading Zeroes on the digits 00 - 09 for each data field.
- Use the ':' separator (e.g. 23:59:59).

Time Zones:

- Specify Dates and Times in UTC whenever possible, following the Date and/or Time by the letter 'Z'.
- For Zones other than UTC the Local Date and/or Local Time is followed by a Zone Designator, where East of Greenwich is Positive, and West of Greenwich is Negative. It is a 4-digit number expressing hours and minutes difference to UTC; where '+0100' means one hour ahead of UTC (e.g. Central Europe), '-0500' means five hours behind UTC (e.g. East Coast USA), and '+0430' means four and a half hours ahead of UTC (e.g. India).

Various Comments:

When combining Dates and Times, always put the Date BEFORE the Time.

The formats described above are the 'Full' format. The ISO standard also specifies formats for various 'Truncated' and 'Reduced Precision' forms. For the Full Format Calendar Date of '1996-05-25', the Truncated version of '96-05-25' says year 96 in any century, and the Reduced Precision '1996-05' form, just specifies the Date down to month level. The Full Format is the most relevant here; the other forms may cause problems of misinterpretation in some

instances (especially problems when a 2-digit year is used).

For each definition within the Standard, there is a 'Basic Format' and an 'Extended Format' style. The Extended format (1996-05-25) includes the separators, and is intended for human reading. The Basic format does not include the separators (19960525), and is intended for data storage (e.g. on Hard Disk), or for Data-Interchange, and can be an ASCII string, packed BCD, a binary number, or whatever you choose.

The Standard defines that a Date and/or Time expressed in the UT or UTC time scale should be followed by the letter 'Z'. For Amateur Radio operators it may be prudent to also allow the letters 'UT' or 'UTC' be used.

For a Date and/or a Time expressed in a Local Time Zone, the standard defines a sign and 4-digit numerical format for expressing that Time Zone relative to UTC. For Amateur Radio purposes, I propose that the established 3-letter abbreviation for Zone, where already defined and in common usage, also be allowed (e.g. EST, PST, PDT, CET, CST, etc).

The ISO Standard allows Dates and Times to be expressed in only fully numeric form. For human reading of dates and times; and to help those people who may not have come across the ISO Year-Month-Day way of specifying Dates and Times before; and for the purposes of this proposal, it would be wise to also allow, within the definition for Calendar Date and Time, the usage of the common English three letter abbreviation of the Month to be used, such that the date 1996-05-25 can also be written as 1996-May-25.

Notes to this Proposal:
---
* that is, as opposed to the truncated and reduced precision formats.

~ ISO 8601 is adopted throughout Europe as EN 28601.
EN 28601 is adopted in Britain as BS EN 28601.
ISO 8601 is adopted in America as an ANSI standard.
ISO 8601 is the Default National Standard in Denmark, Sweden, most East European countries, China, Korea, Japan, and many others.
The Title of the ISO Standard is 'Data Elements and Interchange Formats - Information Interchange - Representation of Dates and Times'.

ISO 8601 also has other provisions for Date expressed as Week and Day of Week, and for specifying Periods of Time. These are not especially relevant to Amateur Radio, and are not covered by this proposal.

Ian Galpin, G1SMD 1996-Jul-28.

[Subject: What is that date II ?]
[USENET: rec.radio.amateur.misc]
[Date: 1997-Apr-27 15:32:40 UT (Sunday) {1997-04-27 15:32:40 +0000}]

See also the Internet Web-Page:
http://www.aegis1.demon.co.uk/y2k.htm

Take a date early in the year 2001, say for instance, February 3rd.

Depending on whether you live in England, America, or Japan
this date will be written as 03/02/01, 02/03/01, or 01/02/03.

Depending on where this date is then read it will be interpreted as
any one of the following (dd/mm/yy, mm/dd/yy, yy/mm/dd):

3rd Feb 2001, Mar 2nd 2001, 2003 Feb 1st
2nd Mar 2001, Feb 3rd 2001, 2002 Mar 1st
1st Feb 2003, Jan 2nd 2003, 2001 Feb 3rd
Only 3 of the above 9 are correct!

Even if we expand the original date to a 4-digit year as in
03/02/2001, 02/03/2001, or 2001/02/03
we still have several possibilities to misread that date:

03/02/2001 can be read as 3rd Feb 2001 or as Mar 2nd 2001 and,
02/03/2001 can be read as 2nd Mar 2001 or as Feb 3rd 2001.
Only two of those four possibilities are the correct interpretation.

We don't really want all this confusion do we?

There is a very simple solution to this problem. See the following
Web-pages for the answers and some other related information:

http://www.aegis1.demon.co.uk/y2k.htm
http://www.saqqara.demon.co.uk/datefmt.htm
http://www.ft.uni-erlangen.de/~mskuhn/iso-time.html
http://www.rightime.com/index.html
http://www.nstl.com/html/ymark_2000.htm
http://www.s390.ibm.com/stories/tran2000.html
http://www.year2000.com/index.html
http://ourworld.compuserve.com/homepages/saphena/year2000.htm
http://ourworld.compuserve.com/homepages/rsandler

Today is 1997-04-27 or 19970427.

This format is defined in International Standard ISO 8601.
It is implemented throughout Europe as EN 28601.
It is the Default National Standard in Denmark, Sweden, Finland, Germany.

In Britain, see British Standard BS EN 28601.
In America see the ANSI X3.30-1985 (R1991) standard.
It is defined in DIN 5008 in Germany.

It is used in many countries of the world, especially Korea, Japan, China, Taiwan, and many East European countries.

Use a 4-digit year and the Year-Month-Day order. Use the '-' separator. Use it in messages, software, date stamps on data, QSL cards, satellite predictions, etc .....

Some people may prefer to write 1997-Apr-27. This is equally clear, and whilst this form is not covered by the ISO standard, it at least retains the same Year-Month-Day ordering that is defined in the ISO 8601 Standard.

There is a proposal document that is targeted directly at Amateur Radio operators. See the full proposal at:

http://www.aegis1.demon.co.uk/y2k.htm

ftp://ftp.funet.fi/pub/ham/misc/year2000.zip

The proposal is also published, in full, in the 1997-Q1 issue of DUBUS magazine.

I think most likely it is the non-polarized capacitor which is in series with one of the motor windings. If you can't find a new one, you can replace it with two polarized electrolytics of twice the value connected in series with opposite polarity. But it will probably be easier to contact the manufacturer or any of many repair places which advertise in the ham radio magazines for a replacement.

The pro-coders can't answer that. That's why they have to resort to whining "It's a requirement" as if that were carved in stone on a tablet delivered to Hiram Percy Maxim by a burning bush. Of course WRC-99 is scheduled to review the issue and there is a call for a showing of *compelling* reasons to retain S25.5.

None of the pro-code whiners can come up with one of course, so they can only act like little schoolyard brats and whine "It's the rules, it's the rules" as if that will have any impression on the *rulemakers*. Those who make the rules are intelligent enough to recognize a circular argument when they hear one.

The truth is that the ITU has already agreed to end the requirement for Morse speed testing for every radio service except amateur (and that exception is only because no WRC has addressed amateur rules in the last decade). No compelling arguments could be made for its retention in any other service. In 1999 it will be amateur radio's turn to face the ITU and try to convince them to retain the Morse speed testing requirement exclusively for amateur radio. If the life safety services couldn't make a case for it, amateurs are going to find

it very hard to do so despite the whining of the pro-coders.

Looks like a long, heated and varying argument and one that I have chosen not to become a part of...until now.

Because I didn't think I could comment until I had experienced both sides of the argument.

I got my No-Code Technician license on 3/10/97 and yesterday (5/3/97) upgraded to Extra when I passed my 1C test. The code requirement scared me to death when I got into this and I figured I would be on VHF/UHF for a long time before dipping down into HF land. That was not the case.

I am no CW expert, that's for sure. I have never even made a CW QSO, but with a little study each day for a month and a half, the test was doable. As for carrying on a QSO at 20 wpm, not going to happen. Not by me and not for a long time. CW is a language and until you have the reflex to hear -.-. [dah di dah di] and C [see] with the same speed and comprehension, you just can't do it comfortably.

So, for the folks that think they can't do the code, you really can. In these modern times in which we live, you shouldn't have to, but you can. Study it, learn it, pass the test and forget about it if it's not your cup of tea. Get your Extra and then give some of the old guys static for not upgrading their General or Advanced tickets. :)

I don't think the code requirement will be dropped for a while and if they go back to 1 minute perfect copy for the tests, it will be a lot harder.

Peace!

That is exactly what the old foggie pro-coders rely on.
Keeping the code requirement insures them that the HF airwaves
will not be used by anyone under 65 years of age. They don't
have the time to waste learning CW!

It isn't a language, Howard, foreign or otherwise. It is just an encoding
of alphabet, no different in principle from ASCII, Baudot, or EBDIC.
And it is quite crude compared to those other encodings. That's why
it has been abandoned by the rest of the communicaitons world as a
method of text transmission. Amateur radio is the last holdout against
modernization. That *should* be an embarrassment to any amateur
not locked in the throes of religious frenzy and bent on keeping amateur
radio in the Dark Ages.

>would hope it wouldn't so as to be able to work full duplex).

160 watts is +52 dbm. If the duplexer really offers 60 db of isolation (and I'd take that with a grain of salt) then the signal into the preamp on the other side will be -8 dbm. Now the *normal* signal into the preamp is -120 dbm or less, likely less or you wouldn't need a preamp. A satellite downlink signal is going to be more in the range of -140 to -160 dbm. So if the leakage doesn't kill the preamp outright, it will certainly desense it to the point of uselessness for duplex operation if the preamp doesn't have its own bandpass filtering. Hopefully it does, however, and that will buy you another 30 db or so of isolation. That may be enough.

Note however that if you need a preamp, it should be up at the antenna and not down in the shack where the coax loss will degrade its ultimate noise figure.

If your separate antennas are close coupled now, and the preamp survives and isn't desensed, then it should be Ok used with the duplexer too because the isolation between the two antennas is likely less than 60 db.

>Also, I have

>1"x2"x.5" box with 3 coax pigtails coming out). If the former, it seems
>like mis-labling. Or, are these ratings so conservative that normal FM use

>(ie short winded qso's) would be considered as even less than intermitant
>duty?

All these ratings are basically burnout ratings based on the power handling ability of the coils and capacitors inside the duplexer. If you examine the coax pigtails, you should see that they are RG-58. That should be a red flag to you that the power handling isn't very high. If you run 160 watts of 2m power through a length of RG-58, you'll notice that the coax gets *hot*. That should be a clue that these duplexers aren't really intended for high power operation.

> Has anyone used a 160W 2M amp with a duplexer? If so what brand/ratings,
>and how has it worked?

For high power use, I won't use anything but good cavity duplexers coupled with RG-8 or better cabling, IE more like a repeater duplexer than these little cigarette pack size toys. I do use a Comet duplexer in the mobile (at one quarter the power you're talking about), and it gets noticably warm. That seems Ok, but I'd be concerned with higher power.

Gee Tom, it was quite clear to me. Let me be less cryptic: If a person has some limitation that prevents them from accomplishing a desired goal, they should accept that limitation, change their goal accordingly, and push ahead now in a new direction.

"...find a new hobby"? I thought I suggested a code-less VHF ticket? You don't really consider operating on VHF as a different hobby than operating on HF, do you?

>Hi Tom, welcome to r.r.a.policy. If Morse code testing were eliminated,
>the hobby would be populated by RF electronic engineers and that would
>make all the electronically ignorant hams miserable. Morse code is their

Wow Cec, do you actually believe that? Art Collins would turn in his grave if he read your vicious comment. So would Art Gentry (who gave the communications world the concept of an in-band repeater). Both those gentlemen were coded RF EEs.

Knowing code is no accomplishment at all; it's what one does on the air and what they do with a soldering gun that establishes their "... claim to fame" (an odd remark - no one I know of has ever desired fame within the ARS community).

Please abide by the followup (directed to .policy),
Jeff KH2PZ

There was an initial surge of pent up demand when the code test free
Tech license was created which, of course, wasn't sustainable. But
the fact remains that amateur radio is now growing at a rate considerably
higher than in the 70s and 80s, and that's very good news indeed.

>>while coded classes barely remain constant in numbers. Additionally,

Actually, the information has been posted several times. The amateur
license class with the highest average age is General, followed by
Extra, Advanced, Novice, and the two Tech classes. The average
age spread between General and Tech is 20 years. Unless we have
some reason to believe that the life expectency of Generals is much
greater than Techs, there's no doubt that the older amateurs are
going to die off sooner than the younger ones. This demographic
shift is inevitable. Some Techs are upgrading, but the rate of upgrade
is much lower than the rate of entry, so we're seeing a shift in the
balance of power in amateur radio toward the VHF+ amateur and
away from the HF amateur.

As some of you may be aware, I have up and maintain a
WWW page with information on various military radio
gear. This is a non-commercial endeavor, and is free to
all -- and shall remain so.

What I am asking is for those who visit the page to take a look
around and help fill in the blanks. There are many pieces of
equipment I have been unable to find information on. If anyone
finds something NOT there that should be, please drop me a mail
at any time via the mail links on the page.

Scanned photos are always appreciated as are scanned schematics.

Your radio links are welcome as well.

I would also like the thank all of you who have used the list and find
it be of value. Much of the original list was handed down from various
folks over the years, notably Bill Beech and Terry O. I have expanded
quite a bit from those original lists, and find the research very enjoyable.

The list so far has close to 11,000 hits since October of 96, and email
keeps pouring in to enflate my ego on the good job done> :-)

Drop by and visit some time if you havent already done so. The URL is

http://telalink.net/~badger/millist/mi.html

Flames and comments always welcome.

Why do all the royalties always go to Motorola and not the real creators of
the work?

You can talk all day about "work for hire" but I still think all the talk
about intellectual
property rights is just another money grab by large corporate interests.
There would
be NO talk of this if software creation was treated like an art, with such
common
niceties as CREDIT to the actual writers, and ROYALTY agreements. A
multimillion
dollar movie credits even the manufacturers of the film and cameras, but in
a similarly
sized software project any credit to anybody is hidden, at best.

This ended up being cross posted. This is easy to inadvertently do, as
most mail
programs simply copy multiple group postings in subsequent postings and
replies.

Until the mail programs change, you will see this happen a lot. Not really
a big
deal. Do you really think a glitch this small ruins a newsgroup?

>Hiram Percy Maxim by a

Typical anti-code "welfare state" rhetoric.

CW remains a requirement because the mode of operation is one of the
most popular on HF, surpassed only by SSB, and we don't have a SSB test
because the FCC assumes most people know how to push a button and speak
into a microphone.

When CW diminishs to be a popular HF mode, surpassed by other modes
(such as up-and-coming digital modes) then it is entirely reasonable to
replace the CW examination with an examination on another mode.

[blah blah blah, yada yada yada ...
more hate-filled rhetoric from Gary deleted]

>The truth is that the ITU has already agreed to end the requirement for Morse
>speed testing for every radio service except amateur (and that exception is
>only because no WRC has addressed amateur rules in the last decade). No
>compelling arguments could be made for its retention in any other service.

Q: Why exactly has the ITU agreed to end the requirement for Morse for every
radio service?

A: Because those services have adopted other modes of operation and have
by their actions eliminated morse.

Q: How does this differ from the Amateur Service?

A: The amateur service continues to use Morse heavily on HF.

Q: So what?

A: When morse use on HF declines, and other modes surpass it, then the
time will arrive to eliminate the examination.

Sure.

First it is just as easy to pay attention to where things are going and
erase the newsgroups that have nothing to do with the subject.
Inadvertant is really inconsiderate.

This is a small ng but why does that mean it can't be "pure". That was
one of the things that was discussed when this ng was born. Postings
that are not "on topic" are a waste of bandwidth and space in my
computer and on the server. How much is wasted when the sender posts
the article across the entire spectrum? A lot.

What it boils down to is that this ng was dedicated to DX. Not FS, not
WTB, not Help my toaster is burning when I'm on 15 cw, etc etc etc.....

Hi Bryan,

Sorry if you thought it was harsh, or if it offended you. But, according to your post, you intend to LEARN the code. So my post was not directed at you. Only the people who DON'T intend to learn it but continue to gripe about it. Also, to answer your question, it is required because the code is the simple core of amateur communications. If all else fails, you can still send code. Bottom line is it doesn't matter WHY its required. Only that it IS required. You don't have to be an ace at the code to upgrade. Its not that hard. And sorry, but it does not require that much time. I have 2 kids myself so I don't have much time at all. It requires effort and commitment and thats why most people piss and moan about it. Good luck, hope you get the up-grade you want.

Hi Bill,

Yes I can, just didn't care what class you held. The code is required because it is amateur communication in its simplest form. Its the core of the hobby. Now, can we please DROP IT!

No smiley, so I don't know if this is an attempt at humor or not. Obviously, since the tech test is easier than the extra test, the extras are going to be more RF savvy. What I am saying is there would be many, many more extras if the Morse code testing requirement was lifted. I personally know about 25 degreed engineers with tech/general/advanced licenses who would upgrade to extra in a minute if it weren't for the Morse code testing requirement.

I've been away from this group for a few months. Coming down from a 30,000 ft. level it's pretty obvious that the Morse code testing requirement is the welfare state gift to technically challenged hams and most of the whining is coming from those hams given something for nothing by merely demonstrating a skill unrelated to and void of knowledge of electronics. To all who don't fall into that catagory, I'm not talking about you.

Hi, John.

Assuming you are referring to the United States Technician license, both Radio Shack and the ARRL have excellent study guides available. The book called "Now You're Talking" is excellent.

Be aware, however, that the question pool for these particular tests will be changed on July 1 of this year. You may want to ensure you get the latest editions of the study guides that will cover these new questions.

Good luck on your tests.

2240. New logbook software

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-04 00:00:00 UTC
From: Sipke Wagenaar <fcb@worldonline.nl>
Message-ID: <01bc58df$02873d20$0b8f099a@sw>
Source record: 199117

May 5, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.
For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

>
Actually, you might be confusing cause and effect here. Perhaps the ONLY
reason CW remains a popular mode is because the requirement still exists.
I've heard a lot of accusations of "welfare state whining" leveled against
the no-code people, but the pro-code rhetoric seems to follow the same idea
of welfare-state entitlements: You can't take away "our" bands and give
them to no-code people whose only claim to them is that they know the
technical aspects of radio -- they MUST learn code."

CW is diminishing, and the CW testing is given far more weight than the
mode deserves even with its historical roots. If you don't "know" SSB, you
can still get an HF license. If you don't know ATV, PACTOR, AMTOR, RTTY,
GTOR, or may of the other modes, you still can upgrade. Antiquated CW is
the ONLY PASS-FAIL mode. This simply is not right.

SSB HAS surpassed HF. Go ahead and eliminate the exam! Pull the exam, and
watch the use of CW fall to its natural level.

Having read the latest load posted in this string, including many from the above poster, I have come to the conclusion that he has realized that he is unable to defend his position in a rational manner, and wants to drop the discussion before he loses.

Yes, CW is required now. Some say the requirement will be dropped "over their dead body" -- perhaps that is what it will take. But why run ham radio into the ground just to hang on to this testing for on obsolete means of communication? Senseless!

Being FAT has everything to do with today's hams.
Go to a flea market and the flock of pigs, hams are fat precisely
because of sitting on their asses in front of their radios.

I also doubt that the incident would cause
> poor Burt to lose his Internet access unless he has a tendency
> to regularly violate his usage agreement with his ISP.

That is true, my ISP provider knows hams for what they are, losers
who whine at the least provacation.

However if you could you would deny me access. And you need to suffer
for being so mean.

It's unfortunate but most PC's aren't well shielded at all. And when you consider the bus clock speeds on these machines you can well see why HF could get obliterated. But I see the same thing with Cable TV and 2m ham gear - kiss channel 18 on the TV goodbye.

I suppose someone could design a "bulletproof" PC but the cost would be prohibitive.

>monitor, soudcard or modem on in or in the vicinity of the shack.

No it isn't. I have five computers running within 6 feet of my amateur
equipment, and don't experience any RFI problems.

>Is this equipment tested for this kind of emission?

Usually not.

>Who is doing the testing?

The equipment makers are allowed to *self-certify* their products.
That does not mean that they test every one or every combination
of boards and accessories. Most of the small clone shops don't
test at all. Individual boards are certified, but it is the *combination*
into a working computer which matters. That varies so greatly,
depending on what option cards you install, that there's no way
to certify the combination will be RFI free.

>What are the standards?

In the US there are two standards, Class A and Class B. Class B
is the more stringent standard, intended for home computers. Neither
is strict enough to avoid RFI to sensitive radio equipment like amateur
radio gear. So even if your particular computer, as configured, was
tested to Class B standards and passed, it can still cause a great deal
of interference to your amateur gear.

So what do you do? You fix the problem yourself of course.
Knowing how to eliminate spurious radiation from electronic
equipment is something every amateur should know. You just
apply the same principles to your computer equipment that
you would apply to your transmitting equipment to prevent
spurious radiation.

The primary thing is to make sure the computer is properly
shielded. What you want is to form a Faraday cage around
the computer so that none of its emissions can get out.
The case of most PCs is poorly designed and implemented
to accomplish this, and the monitors are really pathetic in
this regard.

The biggest problem with the cases is that there isn't good
metal to metal contact between the case halves. That's
because they butt together *painted* surfaces. Sand the
paint off of any mating surfaces so you get metal to metal
contact. And the cases use too few screws. Good VHF
shielding practice requires a screw at least every 5 cm
along a seam (every seam). So get out your drill and a
handful of screws and get to work.

Of course you should make sure that any unused opening
in the case is covered by metal. Make sure the slot covers
are in place and screwed down. Cover any unused drive
openings with metal, etc. Ventilation holes can be covered
with metal mesh.

Now of course you should be using high quality shielded cables
for any external cabling. If you aren't, change them. The DB connectors
should use *metal* hoods, not plastic, and should bond to the cable
shield. Use the supplied screws on connectors, don't just depend on
a friction fit connection.

The monitor will present a strong challenge because it isn't even in
a metal case. You can line the case with metal mesh, or use one of
the available conductive EMI spray paints. If you do this on the inside
of the case for esthetic reasons, be sure to glue fish paper to areas
of the case near the HV circuits or you may have a flashover. You
don't need to shield the face of a color CRT, the shadow mask does
that for you. But if you use a monochrome monitor, you'll need to use
a fine wire mesh shield over the face of the tube too. This can double
as a "glare filter". Remember not to block any ventilation openings.
Monitors get hot and need air circulation. Use metal mesh over
ventilation openings.

It isn't too practical to shield a keyboard, so you should try different
makes of keyboard to find a quiet one. I like the Focus 2001 keyboards.
They are electrically quiet and have a touch that I like. Mice can generate
hash too. Again the best thing is to try several brands to find a quiet one.
I use a $5 Microsoft clone labelled "Saturn" on my machines, or one of
the optical mice from Mouse Systems. They are quiet.

One thing that usually does not help, and can often make matters worse,
is trying to install a separate Earth ground for the computers. The safety
ground in the wall outlet is all that's needed for safety, and if you add another
ground wire it can *radiate* due to circulating ground loop currents. Don't
waste your time with this. Containment is the answer to spurious radiation.

You *can* try to make liberal use of bypass capacitors inside the computer,
but unless you understand the circuits *very* well, you can upset computer
operation this way. The signals inside the computer are *supposed* to be
at high frequencies, and have very sharp edges. So you can't really bypass
or roll off the response of these signals or your computer will malfunction.
Instead what you want to do is make sure these signals stay *inside* the
computer where they won't bother your sensitive radios.

This isn't rocket science. As long as you pay attention to details, shielding will be highly effective in quietening your computer equipment. Nostrums like snap on ferrite chokes and the like aren't a substitute for good shielding practice. In rare cases they may help, but in almost every case good shielding practices will help much more.

Note, it won't hurt to look at the shielding of your amateur equipment either. Lots of that today cheaps out on shielding. If you can hear any signal with the antenna disconnected, your radio doesn't have proper shielding. Fix that too. And naturally use well shielded coax to your antennas. Double shielded coax like RG-214 or one of the Belden cables with the belfoil shield will go a long way toward preventing spurious pickup by your coax. And don't neatly bundle cables together. That will allow mutual magnetic coupling. Run signal cables separated from other cabling, and as much as possible at right angles to cables carrying signals you don't want in your radio. An ugly scrambled rat's nest of cabling will usually cause you less spurious pickup problems than a neatly bundled and laced cable arrangement.

2250. th-79ad help needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-04 00:00:00 UTC
From: patrick@br.homeshopping.com.br
Message-ID: <862795709.11264@dejanews.com>
Source record: 199127

After using my TH-79AD on external power coming out of the cigarette lighter socket It doesnt work on power from the batteries anymore.

My guess that it happened at the moment of pulling the external power cord from he HT...

Using the radio with the battery pack leaves it dead, using an external source works fine..

I have been looking for any fuses, but didn't find any.

Hope someone can help me out here... Does someone also know what the service at Kenwood is like (in case I need it)?

Thanx & 73,

Patrick - KF4NVQ

Does that mean that learning Morse Code is smartening up amateur radio?
Emulating a piece of hardware and learning something that can probably
be taught to apes is an accomplishment?

> Much like the liberals want to do
> America? You can always be a CB operator you know. They don't require code.
> Burden of proof is on the prosecution. You show me any good reason to drop

Spoken like a true redneck. Are you sure you aren't a CBer that stole
somone else's callsign? You sound a lot like channel 19.

Larry hit it on the mark based upon your latest tirade. Also based
upon your blind faith in Morse Code as opposed to knowledge in modern
communications you've demonstrated in your other posts, you'd appear
to be a prime example of any dumbing down that has gone on. Apparently
it is better to pound brass than hit the books.

73,
Todd

When I went off the air eight years ago (bad case of computeritis), the Joplin MO hamfest was eight tables and a quart of ice cream in a local park.

Two weeks ago, I attended the current Joplin hamfest... a full convention center, over 200 tables rented, over 800 hams attending.

I was a charter member of the sponsoring club when it was founded seventeen years ago by a new Novice class. I served as club president there, also a president of a repeater club, published a monthly newsletter, sold a few articles to Wayne Gteene, and editorialized against the use of a truly outdated mode as a touchstone, a requirement for advancement. Even the Merchant Marine has quit requiring ratiotelegraph operators on shipboard. Sidebnd and digital communications have come of age.

Requiring code was, I argued, equicalent to requiring hams to build all of their gear, and have the station passed by an inspector prior to liciensing. There's nothing wrong with homebrew, but following the state of the art on your own is very difficult, and rarely seen these days. KUDOS to those who build their own multi-band, multi-mode receivers (I know one ham who does, and does a beautiful job of it), but the public officials here are most impressed by the legion of VHF stations which stand ready to track severe storms and provide early warning to local communities.

When I was licensed in 1979, some hams were upset by the "flood" of ex-CBers taking ham tests. The code test began losing all meaning back then as copies of official tests became available as "practice tapes." Then, the early volunteer examination program was riddled with corruption I know serveral "11-meter pirates" who co8uldn't honestly copy 5 wpm, yet hold Extra-Class tickets. Guess what? These guys almost all went on to set up digipeaters, ATV nets, emergency phone patches, and otherwise live up to the tradition of service of the ham community.

Today, I listen to the legion of no-code techs, and hear competent operating practices, on-aur courtesy, and nothing that should make any

amateur ashamed to display his or her license. I see, with the expansion of the hobby, Radio Shack getting re-involved with equipment and training, and more small specialty manufacturers opening their doors.

The new bunch are communicators by nature, often coming from the computer world now, instead of Class D Citizen's Band. They often take as much pride in their staions, theor operaing practices, and their public service as any Olde Pharte who had to slog eighty miles through ten-foot snow drifts on their bellies to take a code test in front of an FCC engineer.

Somehoe, despite the interia of the ARRL, the hobby is again viable. Thank Goodness!

>amateur spectrum is available via a code-free license?

I doubt that a medical waiver is appropriate. We don't have any hard evidence that the ability to be a wetware modem is *normal* for the general population. From the small percentage of the population who do it, we might infer that it is the ability to emulate a modem which is abnormal. In that case, it would not be correct to offer a medical waiver for a lack of this abnormal ability.

As Cecil often notes, the lack of ability to dunk a basketball is not a medical abnormality, and it would make no sense to grant medical waivers to those under seven feet tall because they have great difficulty doing it.

>I wanted to become a commercial airline pilot but couldn't pass the
>FAA eye exam, so I chose another career. Maybe your friend should also
>realize his limitations (especially after 20 years) and try pursuing
>another field of interest.

Apples and oranges. Good eyesight is a critical life safety requirement for pilots. Morse knowledge is no longer a critical requirement for the life safety radio services, much less for amateur radio. We don't keep people who are under six feet tall out of basketball just because they can't dunk. They may have other useful skills which still make them valuable basketball players. To restrict participation in basketball to only 7 footers would turn it into a grotesque freak show. That's what the Morse requirement does to amateur radio.

2254. The National Loser Test

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-04 00:00:00 UTC
From: Burt Fisher <burt_fisher@hotmail.com>
Message-ID: <336C7AED.2891@hotmail.com>
Source record: 199131
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,altsupport.divorce.

The National Loser Test

If you answer yes to ANY of the following questions you are a loser:

1. You hit your spouse.

2. You are a child molester and think you ought not kill yourself.

3. You ever drove drunk.

4. You are a typical ham radio operator.

5. You take illegal drugs.

6. You cheated on your spouse more than once.

7. You are in jail for a criminal conviction.

8. You are a saleman at a small radio station.

9. You think audio processing is important to a radio station
(over progam content).

If you answer YES to three of the following you are a loser:

1. You are divorced and think you are not at all at fault.

2. You are fat and think it is not your fault.

3. You think alcoholism is a disease.

4. You are on welfare

5. You hit your children.

6. You are "living with somebody."

7. You use profanity frequently.

8. You own a gun "for protection" but do not live in a dangerous area.

9. You subscribe to Penthouse et.al.

10. You are proud of being a homosexual.

11. You are a member of N.O.W.

12. You smoke.

13. You dye your hair

14. You do not defend those that you agree with for fear you will not be liked.

15. You prefer doing anything over being with someone you truly love deeply (i.e. soulmate).

16. You are two faced.

15. Did not graduate high school

3 yes= smalltime loser
4-6 yes= moderate loser
7-10 yes think about Dr. Kevorkian
Over 10 yes= act on Dr. Kevorkian

Please feel free to add your own.

The ARRL Letter
Vol. 16967, No. 1,444,864
May 2, 1999

Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* League opposes vanity license fee hike
* IN BRIEF: Hams found dead but yet alive?
Wife divorces spouse citing ham radio
for alienation of affection
Doctor denies ham sex change, says he had none to begin with
Ham bathes, film at eleven

FCC PROPOSES, ARRL OPPOSES VANITY LICENSE FEE HIKE

Last month, the FCC proposed effectively raising the fee for a vanity call
sign from $30 to $50 for the 10-year license term. Now, the ARRL has asked
the Commission to postpone the higher fee until after all four vanity call
sign gates have been opened. In comments filed April 23, the ARRL told the
FCC that it does not object to the fee increase per se but said that it
wants all hams to have an opportunity to request a specific call sign under
the current fee schedule. The ARRL admitted to the National DX Enquirer
that that last reason was just a delaying tactic.

The fee increase was among those included for all FCC-regulated
services--including broadcasters and commercial satellite services--in the
NPRM in MD Docket No. 96-186. Under the proposal, the FCC "rounded up" all
FCC-imposed $3 annual fees to $5 per year--the lowest fee in the new
schedule. The ARRL noted in its comments to the Commission that because
projected revenue from the vanity fee increase "significantly exceeds" the
revenue needed to cover the costs of administering the program, a delay
would be reasonable. The ARRL also asked the FCC to limit the vanity

call
sign fee to the minimum it needs to recoup its costs to administer the vanity program but "without rounding to a significantly higher fee." The ARRL said it was abhorant to think that first hams would ever pay their own way and absolutely outrageous to think that the FCC should profit from the hams vanity. The taxpayer owes hams a great debt as hams help keep the service business going (hams cannot repair an open resistor), keep cheap hot dog vendors in business and suppply heart bypass surgeons with ample patients due to their gross excess weight.

The ARRL reminded the FCC that "To serve thy self" is the hams creed.

Not a bad idea. It certainly would ensure people know what they are doing.

>There's nothing wrong with homebrew, but following the
>state of the art on your own is very difficult, and rarely seen these
>days.

Yeah, its much easier just to use plastic and buy a radio-in-a-box.

>the public officials here are most impressed by the legion of VHF
>stations which stand ready to track severe storms and provide early
>warning to local communities.

Public officials here look at hams as (rightfully so) a bunch of
shack-on-a-belt police-authority-wannabes.

>The code test began losing all meaning back
>then as copies of official tests became available as "practice tapes."

Wow. You could make millions selling them.

>Then, the early volunteer examination program was riddled with corruption.

If true back then, why would things be any different today?

>I know serveral "11-meter pirates" who co8uldn't honestly
>copy 5 wpm, yet hold Extra-Class tickets.

Yeah, and I know a lot of extra-class ticket holders who don't know
how to build dipoles too.

>Guess what? These guys
>almost all went on to set up digipeaters, ATV nets, emergency phone
>patches,

Not hard to pick up the phone, wait for UPS, plug in the AC power cord,
antenna connector, and a ground wire (optional).

>Today, I listen to the legion of no-code techs, and hear competent
>operating practices, on-aur courtesy, and nothing that should make any
>amateur ashamed to display his or her license.

Can you send me a tape? I can't find any of this locally on the two meter good-buddy boxes.

>I see, with the
>expansion of the hobby, Radio Shack getting re-involved with equipment
>and training, and more small specialty manufacturers opening their
>doors.

So, this explains why more and more amateur shops are closing their doors permanently from the amateur business (AEA, Tucker, etc.) and others are talking about slow sales and sagging profits from the amateur market (Icom/Yaesu/Kenwood)?

>points, and how it differs from the IC-901*

Get the 901 if you can. It has a *much* nicer control head, and includes the 2m and 70cm bands as stock. You can add the same optional band modules as for the 900 for other bands, IE 10m through 1.2 GHz.

The band modules came into fairly heavy demand by repeater owners wanting to add "remote base" capabilities to their machines. The ACC controllers could talk directly to the band modules. This has sort of dried up the supply of band modules for these radios.

I had a IC-900, but frankly I'm glad it is gone. It appears to offer a lot of functionality, but in practice I found it very lacking in a great number of areas. Most more modern dualbanders eat its lunch, and the extra band modules weren't all that useful to me.

"... what Burt says, not where he says it" - the distinction between what and where is a little blurred. What he says *is* off-topic for this NG but certainly would be appropriate for some other group (such as alt.flame). Continued abuse of a NG does warrant complaints being issued; if the abuser loses his account, then that's between him and his provider - the provider will peruse the violations himself, examine the charter and make the call. Feel free to call the provider a "net-nazi" if you wish (keeping in mind it's his equipment and he can do what he pleases).

I again ask you, if all 200,000+ of us on here resorted to anarchy would you quietly sit by and just kill-file us all? Would you rather see the distruction of a NG rather than demanding some self-disipline? I eagerly await your answers to these two questions with baited breath (whatever that means).

How about a medical waiver? Or, did you tell him that over 95% of the US
amateur spectrum is available via a code-free license?

I wanted to become a commercial airline pilot but couldn't pass the
FAA eye exam, so I chose another career. Maybe your friend should also
realize his limitations (especially after 20 years) and try pursuing
another field of interest.

I applied electronicaly on 6 Dec 96 and received my call on 12 Feb 96.
However, the FCC put a hold on processing calls for a couple of weeks
because they had problems. This added to the delay in receiving my
call. I've seen some guys receive their vanity calls in less than two
weeks. It all depends on when you apply and the FCC's backlog of
applications at the time you apply.

Been there, done tha...now what do you say?

> You won't EVER get it changed.

Change it will, it is just a matter of when.

> There are allot more of us than
>there are of you. Get it?

Careful now. If you don't see the steady shift away
from code support then you are incredibly naive. The
ARRL survey resulted in a majority, but nowhere of
the same magnitude as was the case even 5
years ago. The volume of nocode license holders
continues to increase while coded classes barely
remain constant in numbers. Additionally,
with time, more and more traditionalists will die
off also.

>Now, GO STUDY YOUR CODE!

Guess you can't read the callsign database.

>>Wrong! I just upgraded to General class license last night and what
>>kind of congratulations did I get when I gave my call sign followed by
>>/AG? "What's your emergency. I can barely hear you, you're 5 over 9.

It sounds to me like you are too easily disappointed because you set
your expectations rather high. Do you always look for approval or
pats on the back from others before determining whether an experience
is satisfactory? Well, congratulations on the upgrade but don't
depend on others to make your experience good or bad. You get out of
it what you want to get out it. If you are looking for bad
experiences, you WILL find them. I can promise you that.

If you "worked" your tail off for two months learning the morse code
to get on the hf bands, why didn't you TRY the morse code on the hf
bands? I can only speak for myself but I did not have to "work" at
learning Morse Code. I played at learning it. It was a very
pleasureable thing to do. I still enjoy it today. There are things I
don't enjoy about ham radio but I avoid them as much as I can and
favor the things I DO enjoy.

Are we to believe that you have not listened to hf at all before you
obtained your general class ticket? When you obtained your drivers
license, did you condemn all roads because some turkey cut you off on
Main Street?

I bet if you look around a bit on hf you'll find many more positive
things going on than negative. If you go to 75 meters and try to
operate on certain frequencies you're just setting yourself up for
disappointment. You have no idea what hf is all about yet. Give it
some time. If you can't do that, you're participating in the wrong
activity.

>>Peolpe (sic) only say 'break, break' when there's an emergency." and "get
>>off the frequency, this frequency's already in use, you rat bastard."
>>Well, the next time I hear the ARRL bitching and moaning about band
>>threat news, I going to remember this and then go lobby FOR the loss
>>of the band. Juvenile creeps like this don't deserve to have these
>>bands. And they sure know how to make a newcomer feel welcome.

Seems to me your expectations and reactions are rather juvenile. Back off a bit, take a deep breath, get out your key and start beeping. Or if it's SSB you like to operate, find a clear frequency and call CQ. Until you gain some experience, jumping into a QSO already in progress, especially when it's on a "good-ole-boy" frequency(ies), is going to disappoint the dickens out of you.

Take this however you want. I don't mean it condescendingly or anything like that but give things a chance. There ARE a bunch of jerks on 75 meters and always will be. Leave 'em alone and you'll come home with your dog wagging its tail happily behind you.

If Motorola would support their products like other radio mfgs, they wouldn't have a software pirate problem. King, (sub) Standard, and many others only charge minimal fees for software or will post on their bulletin boards for free! I know many shops who have sent in radios for repair only to find it was re-programmed with a newer ver. software and now the shop has to bend over and purchase MORE software just to be able to program a radio they have owned for years! Or one city PD that purchased a large qty of Mots and needed several versions of software to program identicial radios in the same shipment. I have seen more than one radio dealer financially ruined by Mot for software infringment. My personal opinion is SCREW Motorola!!!!! I wish someone out of the country would post the software on the internet so everyone can have it free, and make those big Motorola lawyers squirm.

5 years ago we didn't have a welfare license.

>The volume of nocode license holders continues to increase

Recent statistics posted here have indicated that even the
codeless license is beginning to see a drop off in interest
(i.e. the pool of people who were going to be attracted to
amateur radio by the codeless license have already become
licensed.)

This, coupled with the fact that the codeless license is
now considered the "entry level" license in amateur radio
suggests at most the levels might increase marginally, but
not substantially, over the next 5 years.

>while coded classes barely remain constant in numbers. Additionally,
>with time, more and more traditionalists will die
>off also.

Since nobody has posted anything suggesting what the attrition rate
through death is in the higher license classes, we'll have to assume
it is linear. If, as you suggest, the coded license classes have
"barely remained constant", this suggests that an equal number of
people are gaining higher license classes as those who are dying off.

>> For you no code losers thats: 73, K4XA

I have no problem with code being a requirement. I think it offers those who do not know code a challenge or goal to work towards in order to gain more privileges. It stresses technical competency.

Just because one doesn't know code doesn't make them a "loser". I don't know code (yet), but I am still a licensed amateur radio operator. I enjoy the friendly people on the local people, and I occassionally make a dx contacts with a friendly ham. I'm just happy that, and I really hate to use this expression, "assholes" like K4XA aren't one of the people I have spoken with.

Just because you may know code doesn't make you high and mighty. You have just found the time to learn code. Some people like myself have 2 jobs and could barely find the time to study for and take the no-code tech exam. The code will come in time, and once I learm it I will find the common decency to help others along in a more professional manner, rather than condemn them for not knowing code.

Sir, I seriously doubt that your name is Joe Mama. I challenge you to drop the alias and come back to the real world. Use your knowledge to help others along and be a bit more professional in you explanation of why certaian things are required. Although you know code, you put your pants on the same way I and all of the other no-code techs do - one leg at a time.

LOOKING FOR HELP!!!

I'm in the market for a good tri-band (2m, 220, and 440) radio,
and I'm leaning heavily toward an Icom IC-900.

Can anyone out there give me some *detailed* info/specs on this
unit? I need to know what the thing is supposed to do (out of
the box), what it's capable of doing (mods n' things), good & bad
points, and how it differs from the IC-901*

I'm having an extremely hard time finding ANYTHING (WWWeb) on
this series or radios.

Any info will be greatly appreciated.

Thanks in advance

May I trow this in for discussion;

How are we going to integrate PC equipment in the shack, if they
generate so much RF-noise?

It is almost impossible to listen to a HF/VHF receiver with a PC,
monitor, soudcard or modem on in or in the vicinity of the shack.

Is this equipment tested for this kind of emission?
Who is doing the testing?
What are the standards?

Bryan Lawson wrote:
> It (code) stresses technical competency.

Hi Bryan, in no way does Morse code stress technical competency. It is a skill and cannot be classified as technical. IMO, the only reason that it is kept as a testing requirement is a welfare benefit for the technically handicapped who couldn't pass a reasonable technical exam. The fact that Len Winkler's WOG suggestion hasn't been taken seriously pretty much proves it. How would it hurt the hobby to allow tech+'s who can pass all the written exams through extra, access to HF? It certainly would help the hobby to balance the black box operators with some technical talent.

extras
> if the Morse code testing requirement was lifted.

DUH! Then you say:

>Morse code testing requirement is the welfare state gift to technically
challenged >hams and most of the whining is coming from those hams given
something for nothing >by merely demonstrating a skill unrelated to and
void of knowledge of electronics.
> To all who don't fall into that catagory, I'm not talking about you.

OK brain boy, then how are we "technically challenged"? When I got my Extra
I took a code test AND an electronics theory test that you yourself said
was harder than the tech test. So how was I "given something for nothing"?
I worked for it sport! I wasn't GIVEN anything! If you want to be in a
radio hobby that has no code requirement, they already have one. Its called
CB.

> --Larry A. Warsinski--

Hi Larry,

I think you would be N8JPK. And a tech, unless you have up-graded since 4-19-94. My guess is you have not. Is the code the reason? Is that why you are so quick to defend the position of those who want to dumb the hobby down to the lowest common denominator? Much like the liberals want to do America? You can always be a CB operator you know. They don't require code. Burden of proof is on the prosecution. You show me any good reason to drop it, THEN I'll defend my position.

2282. ATLANTA RADIO CLUB'S HAMFESTIVAL JUNE 21-22 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-05 00:00:00 UTC
From: rychard@atl.mindspring.com
Message-ID: <5kjdcb$i9@camel4.mindspring.com>
Source record: 199000

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.
Our club president is Bill Bass W4LFC ph# 770-493-8438,his email
address is BillW4LFC@juno.com ,our vice-president is John Talipsky,Jr
KA4VQH ph#770-925-7110 his email address is johnka4vqh@juno.com ,our

club Secretary is Penn McClatchey K4PE ph#404-605-0742 his email is pmm@saf.com our Treasurer is Charles Golsen N4TZM ph#404-252-3303 his email address is cgolsen@atlanta.com ,our clubs activities manager is myself Richard Dean Young KR4IU ph#404-622-8433 my email address is rychard@atl.mindspring.com ,the opinions expressed are my own and are probably bias due to my love of the radio hobbies.
Hope to see you at the hamfest soon.

>>rent out. Their property is zoned commercial. (i:e: higher taxes).

Actually there is only one other PROPOSED 200 foot tower which
has been granted approval for construction permits.

As to the tax rate on commercial vs. residential, it is the same in
New Jersey. Now it may be that a particular commercial
lot is of greater actual value (the assessed valuation), but
the tax rate per $100 of value is the same regardless of
zoning.

>>It looks like this gentleman wants to make his tower competitive with the
>>other two without a zoning change.

Not the issue at all. In fact, the ownship leases space on its
own water towers to commercial interests also and those
water towers are in residential zones also...and, of course,
the town pays no taxes to itself anyway.

>>Do I have this right ? If so he's lucky he hasnt been taken to court for
>>improper zoning use.

He has been and the end result was approval of the original
tower height as regards to the rebuilt tower. In their decision,
the board of adjustment was silent as to the commercial
uses even though it was ited previously.

All my comments above are related to the case in Mount Olive, NJ
which Steve Adell originally posted from the newspaper article
that ran in the Newark Star-Ledger.

Graham,

At the risk of starting a flame fest I will point out a few of your REALLY stupid assumptions. First you should really work on your reading comprehension. Cecil has never asked for and change in test for HIS benifit. Cecil like many others of us feel it is in the best interests of amateur radio to end the code hazing.

Cecil has been a ham for over 40 years he doesn't really need a radio hobby that has no code requirement since he has been doing just fine right here. I'm not quite sure what you had in mind with the last lines of your tirade but if you are infering that Cecil needs some help to get into ham radio you better look again at a call book.

Some one, I can't quite remember who, coined the phrase, "CBers that beep" for folk like you. It sure does fit.

Jerry

>I need some freq lists for airlines, any web sites?

It's not clear to me what your intent is. Do you want airline internal comm or general aircraft band frequencies? Do you want to monitor or do you want the possibility of contacting a passing aircraft for help?

Aircraft voice band is approximately from 118.0 to 136.0 MHz, spaced 50 KHz in most areas, though 25 KHz spacing is becoming more common. Frequency allocations are geographic and aircraft will tune to the frequencies which are in use by air traffic control (center, approach and tower) for that region. If you want to know what frequencies are used by aircraft, contact a pilot or airport FBO in the area you intend to operate and ask them for a list. The information is part of the chart and data package that pilots are required to keep current. Obsolete charts and directories are usually freely given away if you ask nicely.

The single most useful frequency to know is 121.5 MHz. ATC always monitors this frequency and most airliner's and some private aircraft will monitor this when they don't have a need for their second or third radio channel.

Recognize that ground contact with ATC will be problematic as their antennas are located to provide good coverage for aircraft not for ground transmissions; you will make better contact with aircraft. If you transmit with your ham HT it will not be legal for aircraft band. In an emergency that might be overlooked, but I've read of some people who used police or fire bands in a legitimate emergency and after they were helped, they were still brought up on charges. You can get aircraft band HT's (Icom, Sporty, Bendix/King; ranging from $350 to 550) but their use on the ground without being coincident with licensed aircraft operations is not covered under existing rules.

Source record: 199012

I'm a SWL, not a ham (ad least not yet) and I've listened to 3853
for a few months and found the content of the transmissions and
characters on this frequency to be quite amusing. The intereference
I hear on there is, I believe, attributal to "RF-clowns" from other
frequencies who are bored and/or have no life apart from radio.
I hear these type of idiots on the CB ste all the time, doing the same
stuff to the intellegent conversations there also. So, apart from the
"external agitators", the usual group on 3853 seem to be a likable
and all around great group of good-ole-boys. Much more interesting
than listening to the usual signal checks and weather reports.

From: David Nye <nyeda@uwec.edu>
Message-ID: <336D916D.3DA2@uwec.edu>
Source record: 199013

I've written a freeware Morse code trainer that runs under MS-DOS and am looking for folks interested in beta-testing it, from new hams who have yet to take a code exam to seasoned veterans. It provides five modes of working with the code: 1) copy random characters or 2) text files to paper, 3) sound characters as you enter them, or 4) you type the characters on the keyboard as you hear them and the program keeps track of your score and 5) optionally eliminates characters from the study list after 3 correct guesses so you get more practice with the ones you're weak on. Please email me if you are interested and can receive the program as an attachment to an email message.

Rather inflammatory and subject remarks concerning a post I find rather close to the target.
BTW, whats with non-descript mail address, hiding from something?

The Extra's I know, even though they are great people, would be the last persons I would go to seeking knowledge about RF theory. I presented to this newsgroup before a case where an Extra wired an 80' long wire to 75' of RG-58 to a Radio Shack 2 meter HT.

I believe even you have called CW a 'filter'. A filter for what? Letting 'memorization' and finger skill steer the Amateur Community? This is not Nintendo. I believe the technical testing should improve by testing knowledge of actual theory. There have been some really great communication break through that are even being utilized by your Hard Disk Controller that Amateur Radio Operators have no idea about. The only reason Morse Code exist on the airwaves is because at the time you could only reliably turn a spark generator Off or On. This is hardly a reason to perpetuate a requirement.

Many electronic professionals could, and probably would, be interested in Amateur Radio. Morse Code is a barrier to them because, unlike yester-year, and the retired community today, they do not have time to commit to such an arcane communication method. To this, I often question why I am even replying to these newsgroups, for my time is taxed as well.

It is strange to note the really talented Amateur's I know hold Advanced tickets, not Extra. Never did ask them why they stopped.

<><><><><><><><><><><><><><><><><><><><><><><><><>
Three suggestions:
1. Move your antennas away from the rig. If you're listening with a
long wire plugged directly into the antenna connector, it's too close.
Use coax to the antenna, at least 20 feet or so away. Farther is
better.
2. Computer equipment in the US is rated either class A or class B
regarding interference. Oddly enough, class B is better than A. Be
sure that's what you have.
3. Some computer power supplies have been made with the built-in
filters omitted, presumably for class A. Open up the power supply and
check on the PCB where the 120 vac cord comes in. Several people on
the 'net have reported finding the capacitors missing and inductors
replaced by a jumper wire. Upon installing suitable parts, their
noise problem was gone.

Hope this helps.

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Wearable Computing and Personal Imaging

[Editor's Note: Steve is currently a graduate student at the MIT Media Laboratory and has done a considerable amount of research into, and implementation of, wearable, wireless networked computer systems using amateur radio (via a 56kBaud GRAPES radio modem) as the physical layer. He is arguably the Inventor of the "Wearable Computer." You may have read about him in the April 1996 issue of Scientific American in an article called Smart Clothes, CQ-VHF, the February 1997 issue of IEEE Computer, or seen him on the October 1996 episode of Scientific American Frontiers on PBS called Inventing the Future. He is interested in connecting with other serious amateur hobbyists pursuing like or similar technologies. See his World-Wide Web Page above for more information.]

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Joe Moell K0OV

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio

Direction Finding Simplified), including board/kit/parts sources
and building tips
* Frequently Asked Questions and answers from the Homing In mailbox
* Index and subject list of all Homing In columns in 73 Magazine
through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is
not affiliated with 73 Magazine, Wayne Green Enterprises, or any other
commercial entity.

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

Jes, mi parolas la Internacian Lingvon, Esperanto.
Yes, I speak the International Language, Esperanto.

Esperanto, the International Language, is spoken by 600,000 to 2,000,000 people in over 110 countries.

Over 75 countries have national Esperanto organizations, including third-world countries like the USA.

In Europe there is a very active Esperanto Ham Radio association known as ILERA - Internacia Ligo por Esperanto-Radioamatoroj (International League for Esperanto Radio Amateurs).

For more information concerning Esperanto, contact ELNA (Esperanto League for North America) at +1 (800) 828-5944 or send E-mail to elna@netcom.com. (The ELNA membership list also lists member ham calls and E-mail addresses.)

If you wish a ham Esperantist for a penpal, contact me at one of my addresses above.

I am an NTS operator running an unattended digital (Express, Winlink
equivalent) digital system. I operate a hub station for Eastern Canada
Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.). My current
concentration is on writing UNIX based tools (e.g. software for
logging, antenna design, propagation analysis) that can be shared
throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a
variety of ham-radio related mailing lists as well as a comprehensive
World-Wide Web site and FTP archive, and was one of the first Internet
servers dedicated to ham radio. The system is also a hub site for the
ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an
e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a
currently valid amateur radio license. The server provides a number of
useful tools for the radio amateur, including satellite tracking
software, CAD design software, SPICE, and other tools not generally
available to people running on Microsoft Windows or Apple based PC's.
(It runs 4.4BSD UNIX.) To obtain a login on the server, send a
photocopy of your current amateur license, along with a SAE and IRC
to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.
